THE MOTOR CYCLE

1^D

Largest Circulation.

Founded 1903.

No. 432. Vol. 9.

THURSDAY, JULY 6th, 1911.

REGISTERED AS A NEWSPAPER FOR TRANSMISSION IN THE UNITED KINGDOM.

Price 1d.

Published Weekly.

UNEQUALLED VALUE IN EVERY TYPE IS OFFERED

At WAUCHOPES

The House where you always find London's largest selection of newest and best motors of all types and makes, and genuine second-hand machines overhauled, renovated, and fully guaranteed.

ASK FOR TO-DAY'S LIST WHICH INCLUDES the under-mentioned machines ready for delivery from stock.

"50% INCREASE IN MILEAGE PER GALLON" BY USING A MILLS PATENT PETROL ECONOMISER AND FILTER.

Proved by the following letter received 20/5/11.

Dear Sir,
You ask me to let you know how I found the "Economiser." I think it is just splendid, with a jet bored out to give me the same power and take the same amount of air as the "Economiser." I do 60 miles per gallon on my 31 h.p. Triumph motor cycle. With the "Economiser" I do 90 miles per gallon, that is to say, I use two-thirds of the petrol or get 50% more miles per gallon. The machine runs perfectly with it, and as proof of this I was **Second** in the Cambridge University Motor Cycle Club Speed Trial, and **First** in their Hill Climb, although I had the second smallest engine in the Class, and was carrying 34 lbs. more weight than anyone else, I was First on Time and on Formula. You may use this letter as you like.

(Original at office.)

ECONOMISER gives a fine scent spray which is instantaneous gas, **ADAPTABLE** for all types of Carburettors on car and cycles. **GUARANTEED** to improve the Carburation or the cost refunded.

Write for particulars giving claims and testimonials to—

ALBION FREE ENGINE CLUTCH ADJUSTABLE PULLEY

Unique Sidecar Success.

*This is the
Chater Lea
8 h.p. twin
for sidecars
or runabouts,
as used in
all the Trials.*

The M.C.C. Team Trials again provided striking proof of the perfect reliability of the Chater Lea No. 7 Sidecar machine; 100% results for **third year** in succession in this competition.

4 started: all non-stops.

This splendid performance was the outstanding feature of the event, and, following on the many successes in recent trials, proves conclusively that for sidecar work on the road **the** machine is the

Chater Lea No. 7.

This is the machine specially constructed for sidecar work; distinctive in design, with 8 h.p. Chater Lea engine, multiple disc clutch, three-speed gear box, chain drive, handle starting, etc., and, in common with everything bearing the Chater Lea trade mark, perfect in material and workmanship. The No. 7 is a sidecar machine, not a compromise; it **will** give private owners entire satisfaction, will take a sidecar anywhere, and is the ideal machine for sociable touring over hill and dale.

WILL YOU HAVE A TRIAL SPIN?

GAMAGES

Send for our New Motor Catalogue for 1911. It is a liberal education in what is required by the motorist.

The Premier Motor Tailors.

The "Minerva" Double-breasted Waterproof Suit.

Of stout double texture material, deep storm collar, with button-up tab. Sleeves with outside straps, and fitted inside with expanding wind cuffs. All seams sewn, taped, and cemented. Complete, with overalls to match.

Price .. 27/6

Waterproof Leggings.

NOTE.--There is no opening in front to let in wind or rain; ample protection is provided where it is most needed.

These leggings are our latest and most improved pattern, and are proof against the severest weather.

—In fawn colour.

Price .. 15/11

Postage 6d. extra.

The "Triumph" Single-breasted Waterproof Suit.

Of stout double texture material, deep storm collar with button-up tab. Sleeves with outside straps, and fitted inside with expanding wind cuffs. All seams sewn, taped, and cemented.

Complete, with overalls to match.

Price .. 25/-

What 'Motor Cycling' says about Gamage's

PONCHOS.

A SLEEVED PONCHO.

"All motor cyclists appreciate a coat that will keep them dry, and as so much depends on the design of the cut, putting aside for the moment the question of material, it is worth while to take a look at Gamages Poncho for touring motor cyclists. It has a short cut at the neck secured by one or two buttons, after which the breast is in one piece, as in the case of an umbrella coat. As can be seen from the illustration, the collar buttons up well round the neck, and substantial ventilators are situated in the back, yet this design does not let the water in, as guard flaps are fitted. The sleeves are provided with cuffs that are really wind-tight, and the length can be made to cover as much of the rider's knees as he desires. The best way to test the coat for this is to try it on when sitting on a chair as one would do on a motor cycle, when the amount of protection needed can be easily gauged."

Prices—18/11

25/6, 31/6, 36/6.

The "Moto" Frieze Cycling Jackets. Fitted with the "TRIPCOL" COLLAR.

Double-breasted. Lined throughout body and sleeves with leather or fleece.

What the Junior Tourist Trophy Race has taught us.

THE Junior Tourist Trophy Race, which was brought to a conclusion last week, has taught several useful lessons to motor cycle makers and users. When the details of the event were first discussed it was intended to allow pedalling gears on the assumption that machines with such small engines could not reasonably be expected to propel their riders up the mountain road unless some exterior aid were forthcoming. This suggestion met with strong opposition on the part of the writer, who, though he knew that some exterior aid was necessary for the engine, was convinced that such outside assistance should be mechanical, and emphatically not human.

After a hard fight the day was won, and no pedals were allowed in either of the T.T. races, and with what result? The dearest dream of all those who have had the development of the motor cycle at heart has been at last realised—almost every machine in the Junior event was fitted with a change-speed gear, and there were but four single-gear motor cycles in the whole list of entrants. The race, therefore, has shown up the reliability of change-speed gears in general and one make in particular, as the first four machines to finish were fitted with this form of gear. It is true that certain gears gave trouble, but this is a good thing for the manufacturers of them, as they can now readily locate the cause and remedy it without delay. Not one of the single-gear machines came in for a place, and in consequence this state of affairs is exceedingly gratifying to us who for so many years have advocated the use of change-speed gears on motor bicycles. These devices are by no means a

new idea, as the older of our readers are aware, and several were described in issues which appeared during our first year of publication. But they have been admittedly a long time reaching their present stage, for the simple reason that there has been little opportunity for them to have been tested to destruction. Just as when years ago passenger machines of the lightest and raciest description with single gears were entered for and were successful in competitions, and it became desirable to frame rules so that change-speed gears literally *had* to be fitted, so has it come about that their compulsory use in competition has brought out a very marked improvement. We are yet far from perfection, but we are approaching it. Another lesson learned has been that now the gears have proved themselves to be satisfactory for racing purposes, engine sizes may safely be reduced in next year's Junior Race, if the authorities see fit, and so little by little the really efficient go-anywhere lightweight will be evolved. The thanks, therefore, of those enthusiasts who follow the pastime closely are due to the A.C.U., whose officials, in spite of opposition, chose the more difficult course, and thus brought the modern machine one step nearer development.

It is more than interesting to note that with one exception the first nine men to finish rode twin-cylinder machines. Therefore the allowance of 40 c.c. larger capacity is still too great to allow the two types of engine to compete on level terms. The one single-cylinder which was second in the race was ridden by a man of great experience and skill, and is therefore the exception which proves the rule.

The advantages of chain transmission are at times undeniable, but that the first four machines were belt driven is a fact which must not be overlooked.

Premier.

Outwardly only the larger filler caps to the petrol and oil tanks and a foot brake that can be worked by either foot (this is shown in the first of the accompanying sketches) distinguish the Premier T.T.

The double pedal brake used on the Premier.

models from the ordinary standard machine, but inside the engine a few modifications have been made with a view to lightening the reciprocating parts. This has been done most notably in the piston, which has been considerably pierced in the walls, and the weight has been brought down to a very low figure indeed. As will be seen, only a single piston ring is used, and the gudgeon is drilled right through. The head is strengthened by the addition of a thin web, which also serves to make the walls more rigid. The Premiers are fitted with Armstrong gears.

N.S.U. Development.

The Junior N.S.U.'s are quite new models, which will no doubt be standardised for next season. The single-cylinder engine has a bore and stroke of 69.8 mm. by 78 mm., giving a total cubic capacity of 299 mm. The inlet valve is operated as in the single-cylinder $3\frac{1}{2}$ h.p. motor, by a long pull-rod driven from the underside of the exhaust camshaft. The valves

The N.S.U. adjustable pulley fitted to the Junior machines.

are well on the large size, and made of nickel steel. The frame is looped, and a prominent feature is the large external contracting band brake on the right-hand side of the rear wheel. An adjustable pulley of very neat and simple design is employed, and this is illustrated in the subjoined sketch. The outer flange, which is milled at the edge, runs on a thread, and is locked in any position by a small locking ring. One of the best features of the pulley is its compactness and the absence of any overhang.

The exhaust valve, instead of having the usual plate and cotter to secure the spring, has its stem threaded at the end, and on this is screwed a shoulder piece and lock-nut, which, in addition to forming a spring washer, performs also the function of an adjustable tappet, and at the same time provides a valve foot, which on account of its large surface should stand any amount of wear without showing signs of hammering down.

Another interesting point is the belt fastener, which employs a stout gun-metal bush instead of the usual steel one. The fastener plates also obtain a better grip of the belt by bending the lower part of each, so that it has a tongue which engages with the transverse grooves moulded on the lower surface of the belt.

The new Rudge spring fork. This is at present being used on the T.T. models, and will in future become standard practice.

M.R. Twin.

For all the tininess of its cylinders, the little M.R. twin has as healthy a bark and as strong a pull as many an engine of greater capacity, and no doubt a good deal of this is due to the use of mechanical inlet valves. These are quite a new

introduction for the M.R., and we therefore append a rough sketch indicating how the arrangement is carried out. The great strength of the valve tappet guides will be noted. The tiny little cams with which the overhead rockers are driven are held in a small box applied to the outside

M.R. overhead inlet valve mechanism, and special cooling arrangement of cylinders.

of the crankshaft, which also forms the cover of an extension of the exhaust camshaft. It will be seen that in order to gain additional cooling surface the radiating flanges are cross-pinned with thin brass tubes clinched over top and bottom. No doubt this is necessary, for when the Armstrong gear is put into the lowest ratio the little M.R. engine literally hums like a bee, and its revolutions per minute must be something enormous.

A TEAM OF BEDELIAS.

A group of runabouts, taken outside the Punch Bowl Hotel—a popular resort of Liverpool motor cyclists.

JULY QUARTERLY TRIAL.

THE A.C.U. Northern Centre July Quarterly Trial will be held on July 22nd. A map of the course was published last week (see page 663). The following description of the route will be of interest to competitors as well as spectators and readers, who will rely on these pages for an account of the performances.

The start will be made in Newcastle, and the route then skirts the town till the Newcastle-Carlisle road is reached and followed for five miles to Heddon on the Wall, and on from there to Corbridge, where a left turn down a sharp incline over the Tyne bridge brings the traveller on to the Hexham Road. On reaching Hexham the Tyne is again crossed, and four miles further on is Brunton Bank. This hill has a blind turn to the right at the bottom and is about a mile long, with a fairly severe gradient, but it should be taken by a touring mount in good trim. Four miles further on a turn to the left is taken, and the Roman road is followed for twenty-three miles as far as Elshaw Bridge, over the River Reed. A sharp turn to the right is here taken, and, after passing through

Otterburn and Elsdon, and taking a turn to the left, an undulating road is followed through Thropton to Rothbury. Some four miles from this place the return route is crossed between Whittingham Station and Longframlington. The road is very hilly to Alnwick, and some beautiful views are obtained in passing Two hills, namely, Lakeside Hill and Corby Bank, are specially severe on this stretch. On arrival at Alnwick luncheon will be partaken, after which the road for Ilderton Station through Eglingham is followed, and thence, on turning sharply to the left at Ilderton Station, which marks the most northern point of the route, the road continues almost in a direct line in a south-easterly direction past Whittingham Station, through Longframlington, Longhorsley, Morpeth, Stannington, and Gosforth, back to Newcastle.

This last section of the road is forty-two miles long and offers no gradients of special severity. The distance covered before lunch will be $74\frac{1}{2}$ miles, and after lunch $55\frac{1}{2}$ miles, making in all a total distance of 130 miles.

AN AMERICAN CROWD.—The photograph, taken at the start of a motor cycle race in the States, gives a good idea of the vast number of spectators present on such occasions. It should be noted, however, that the tracks are usually small and the riders always in view.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All queries should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately for ease of reference. Letters containing legal queries should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Overheating.

? I shall be glad if you can tell me why my engine overheats. It gets plenty of oil and a good draught. Machine is rather heavy for a 5 h.p. air-cooled engine, but the country is flat, and it pulls up in about ten miles, only to start again in a few minutes.—C.W.R.

We should recommend you to take the cylinder heads off and remove all carbon deposit. Carefully choose your brand of lubricating oil. Look after your valves and see that the valve springs are sufficiently strong.

Timing of Magneto.

? Since the magneto of my 5 h.p. twin Rex has come back from the makers the engine runs splendidly from cold, but only fully retarded. If advanced, it runs very sluggishly and badly, but when retarded runs well again, and only runs in the fully retarded position. After about six miles the engine overheats. It is well oiled. The magneto has not been touched since it came from the makers. Is the carburetter or magneto at fault with regard to the overheating?—R.S.T.

We should be inclined to think that the magneto timing has been set wrongly. Set the magneto, when it is fully retarded, with the points about to break and No. 1 piston at the top of its stroke.

Condenser Trouble.

? With accumulator ignition and make and break contact I find the platinum points get pitted rather badly after a few miles' running. Do you think the condenser causes the bad sparking which takes place, and, if so, what should I do? Would it be an improvement to make the coil into a trembler, and, if so, would it be a very difficult job? About how many miles to the gallon should a 3 h.p. cycle run? Which is the best method of repairing a cracked celluloid accumulator?—J.A.H.

The trouble is due to the condenser in your coil not working properly. Every coil has one. Under the circumstances, it would be best to get the coil overhauled by an electrical firm. It would not be advisable to convert the coil to a trembler, as it would detract from the efficiency of the engine. The machine should run about ninety miles to the gallon. You can obtain a suitable repair outfit from any motor depot.

Faulty Coil.

? Will you advise me in the following difficulty? My machine has dry ignition with plain make and break, and the tip of the contact blade soon gets pitted, and both points get sooty, though the tip on the screw does not wear. I have had two new genuine platinum tips put on the blade, but they still pit and soot. A new special plain coil has not made any improvement. Is it possible that the ignition cam, which is flat-nosed and not sharp like the old Minerva cam, could cause pitting and sooting through too long a contact, or could the tip on the blade, being of softer material than that on the screw, cause it to pit and soot? My wiring is in good order, and I have changed the direction of current without improvement.—H.S.

We do not think there is any doubt that the trouble is due to the coil, the condenser of which is at fault. It is quite possible that in buying another coil you have one which is also at fault as regards the condenser. We should therefore re-

commend you to communicate with the firm from whom you bought it. We do not think the cam would affect the pitting. We cannot really see how the trouble can be due to any other cause than the condenser.

Double Firing.

? Recently my 3½ h.p. Phelon and Moore has started a most extraordinary firing; I call it double firing, or firing exactly like a twin. It will keep at it for miles when running easy, but when I come to a hill with sidcar it fires regularly, and as soon as I reach the top and pick up speed it starts again. I have tried every means of curing this trouble I can think of. Can you help me in any way?—IK 479.

We are inclined to think that the machine suffers from misfiring, due to the exhaust valve either sticking in its guide or not having a sufficiently strong spring. There is also a possibility that the high-tension carbon brush in the magneto may not be making proper contact, but we think the trouble is more likely to be due to the valves.

Off to business in Madras. A Durkopp and F.N. in the East. Riders, J. A. MacGill and A. C. Hanbury.

Oiling a new Mount.

? I have recently purchased a new 2 h.p. Humber lightweight 1910 model. (1.) What amount of oil should I give it? (2.) Should the oil tap be turned off when running? I seem to lose a lot, as the engine casing is always thick with it after a run. (3.) Should there be any play on the shaft of the engine? When I pull the pulley out, there is about an eighth of an inch.—C.C.H.

When the machine is new give half a pumpful every five miles. The oil tap should be turned off as soon as the charge has been given, otherwise the oil is likely to run into the engine. A little bit of end play does not matter, but there should be up and down play of the engine shaft.

A Lubrication Difficulty.

? I am riding a four-cylinder motor cycle, and have had trouble with the piston rings being seized into the grooves with carbon after every 200 or 300 miles. The makers tell me that it is my own fault from over-lubrication. This, I know, is not the case. The oils used have been Vacuum, Price's, and the oil recommended by the makers. The front piston ring gives no trouble, and the others start seizing on the exhaust side, and always the top ring first. Can you tell me what is the probable cause? There is always a carbon deposit on the exhaust side of the pistons below the rings.—P.C.A.

We should be inclined to think that the trouble is due to excessive overheating through over driving or inefficient cooling, and the fact that the front piston gives no trouble further substantiates our theory, as this, of course, gets the maximum amount of draught, and, at the same time, shields the others. If there are no holes drilled in the piston, it would be worth while trying a couple, or better still an oil groove turned in the piston to ensure a film of oil reaching the piston rings at all times. You could then cut down the quantity of lubricant without fear of the piston running dry. If you give this experiment a trial we shall be interested to hear what the result has been.

Too Much Air.

? My 1909 7-9 h.p. motor cycle and sidecar with automatic carburetter does not give good results. The machine starts easily with all main air supply closed, and I have to keep it closed when running. Sometimes, when cold, the engine starts, runs about half a minute, and stops. After doing this two or three times it goes off well. I might add that the machine runs better on low gear than on high, the mistfiring occurring at slow speeds on high gear. Can you help me?—O.B.

We think the trouble with the carburetter can be quite well cured by a small adjustment. You should find an adjusting screw at the side of the carburetter, which will cut out one of the air holes. You might try adjusting this, or, if you cannot get any satisfaction, take the whole carburetter down and scrupulously clean it. The fault is due either to too much air or to too little petrol.

Causes of Knocking.

? Granted: (1) That an engine begins to knock when ascending a hill with extra air one-half and throttle one-third open; (2) that the knock ceases if the air is gradually closed and the throttle untouched; (3) that this result is caused by enriching the mixture—then why should not the knocking cease if the extra air is left one-half open and the throttle is gradually opened to one-half or two-thirds? Would not this operation enrich the mixture just as effectively as in the former case? And yet the knocking becomes very much worse. Hence is knocking really stopped by enriching the mixture, as stated in the textbooks? May it not be that the total volume of mixture drawn into the cylinder is diminished, and that consequently the charge is fired while under less pressure? This would tally with the fact that knocking is stopped by retarding the spark.—H.B.J.

The knocking that you experience with your machine is a trouble which is rather difficult to explain, and has puzzled quite a considerable number of people. In the first place, knocking

only occurs when the ignition is really too far advanced, remembering, of course, that there is a certain amount of automatic advance on a magneto independent of the situation of the advance lever. Moreover, the exact point at which the mixture ignites can be altered according to whether it is very weak or very rich, so that with a weak mixture the knock often occurs rather earlier than it otherwise should. Undoubtedly the best way to stop it is to obtain a rich mixture by closing the extra air, but it can also be stopped on occasions by opening the throttle extremely wide and leaving the air lever in the same position. There are many occasions, however, in which opening the throttle somewhat merely increases the knock, and this is mainly due to the fact that the engine is already going too slow, and that it takes a considerable movement on the part of the throttle to enrich the mixture in a corresponding manner to that effected by a comparatively small movement on the part of the air lever. We do not think you will find that any alteration in pressure due to the amount of throttle opening will have much effect on the ignition point, but it is undoubtedly true that, other things being equal, an increase of volume raises compression, and knocking is thereby increased.

READER'S REPLY.

Carburetter Adjustment for Sidecar Use.

With reference to your reply in the issue of June 15th to "A.B.M." I had the same trouble with my 1910 Triumph and sidecar. The remedy is to raise petrol level, when machine will be all right. It only occurs on a stiff hill, and is caused by carburetter running dry owing to low gear and riding all out, which you have to do with sidecar. I found out by trying a hill on which I had come to a standstill a second time and raising needle valve, when machine went up splendidly.—A. WARD.

B.A.R.C. Meeting at Brooklands.

Included in the comprehensive racing programme arranged by the B.A.R.C. at Brooklands on July 20th are two motor cycle handicap events, for all classes of machines. Entries close at noon on July 8th.

One Thousand Miles without Opening the Toolbag.

The above trial, which has been postponed owing to the illness of the rider, W. Pratt, will take place from July 10th to the 15th. It will be remembered that we published a paragraph in these columns on May 11th to the effect that Pratt would try and cover the whole of the 1,000 miles without opening the toolbag. On July 15th the rider and others will journey to Brooklands, where they will witness the international motor cycle races between C. R. Collier (Matchless) and Jake de Rosier (Indian), and then continue on to the R.A.C. premises in Pall Mall, where the trial will conclude.

The Gritting of Streets.

A very sensible letter has been addressed by the secretary of the Roads Improvement Association to the various local authorities in the Metropolis, enclosing a memorandum containing recommendations for the gritting of the streets of the metropolis. Motor cyclists, and indeed all users of rubber-tired vehicles, are well aware of the destructive effects of the large pieces of flint which are now used, and which are of little use as a preventive of slipping until they have been crushed by heavy traffic. It has now been urged that gritting material should not exceed a gauge of $\frac{3}{16}$ in., and it is claimed that this gauge would prove both more efficient in providing traffic with a foothold and more economical, as bulk for bulk it would cover a considerably extended area.

Manx Jury's Rider at Inquest on V. J. Surridge.

At the inquest on the body of poor Surridge, held at the Glen Helen Hotel on Tuesday of last week, a verdict of "Accidental death" was read out by the Coroner, who expressed the sympathy of the jury with the relatives of the deceased. The Auto Cycle Union, through its legal adviser, also tendered the deepest sympathy with the relatives, and spoke on behalf of all the competitors who were present in the island.

The jury agreed with the verdict, but recommended that the A.C.U. should shorten the course on any future occasion, and stated that the reason for coming to that opinion was the number of bends on the course and the difficulty competitors had in remembering them all.

The Coroner and the legal representative of the A.C.U. then pointed out that the length and nature of the course had nothing to do with the accident, as the point where it occurred was part of the old or shorter course. The Coroner mentioned that, although the jury had the right to express an opinion of that kind, it formed no part of the verdict. Red banners were at each awkward turning, and competitors were warned by them.

Judging by local reports, there was some jealousy this year in Peel and district because the new course embraced Douglas and neglected the Western portion of the island, and this may have had something to do with the jury's rider.

An Amazing Theft.

The Harry Smith gold cup for the M.C.C. Brooklands meeting on July 8th has been stolen from the Holborn Viaduct premises of the Rover Co. The window was smashed about one o'clock in the morning and the cup taken.

The Motor Cycle in Italy.

A correspondent in Italy has forwarded us some interesting opinions upon the progress of motor cycling in Italy, and the great boom which the Turin Exhibition will make as regards English touring machines. The exhibition gives British manufacturers a long desired opportunity of collectively exhibiting their latest models, of which hitherto much has been heard but little seen. The sport has for several years suffered from neglect, due, we understand, entirely to the use of powerful machines without clutches or variable gears, and, therefore, so unsuited for Italian roads. Now that motor cyclists in Italy can be introduced to the latest free-engine models, equipped with variable speed gear, there will be a striking revival in the popularity of the pastime. The Italian roads need extra heavy tyres and complete control of air intakes, and in the case of two-speed machines ample provision for extra air because of the intense heat and intense cold which have to be encountered all over Northern Italy. So far the only machines really known in Italy are the Triumph, although our correspondent adds that the B.S.A. mounts have recently been noticed.

THE HARTFORD ROUGH RIDER GRIPS.

The ideal grip for motor cycles. Made of stout duted rubber. Only half the handle is fixed to the rigid bar, the end remaining free. This gives a grip which completely absorbs the slightest vibration and for long non-stop runs will be found a perfect boon.

Size $\frac{1}{2}$ in. or 1 in. Price per pair, 4s.

Postage 3d.

THE HUNT DRIP FEED LUBRICATOR.

For inserting in existing oil pipe. Adjustable to any number of drips. Oil can be forced through by pump if desired.

Price (plated) 5/6, postage 2d.

SPARE PETROL CAN.

Neat and compact. Designed with metal loops for strapping to carrier. Enamelled green with brass stopper.

1 gall size each 3/-
 $\frac{1}{2}$ " " 1/9

Postage 5d.

THE HUNT MAGNETO AND ENGINE PROTECTOR.

For fixing in front of engine, and thereby protecting engine and magneto from mud and dirt. In solid leather, both sides enamelled black.

Price 4s. 6d. Postage 4d.

THE HUNT HELLESEN DRY CELL.

No corroding terminals. No acid. No charging. Always ready, clean, and dry. The "Flash." Height $6\frac{1}{2} \times 4\frac{1}{2} \times 2\frac{1}{2}$ in. Approx. mileage, with single-cylinder engine, 1500. Price 6/6. The "Flight" ditto. Height $5\frac{1}{2} \times 5\frac{1}{2} \times 2\frac{1}{2}$ in. Price 6/6. The "Midget" emergency ditto. Height $5\frac{1}{2} \times 4\frac{1}{2} \times 1\frac{1}{2}$ in. Will run approx. 300 miles. Price 4/4. Postage 6d. extra.

MOTOR CYCLISTS' CONVEX LENS MIRRORS.

Enables the rider to see what is behind him, and, what is more important, the police trap.

Fitted on handle bar. Made so that it can be adjusted to any angle, with ball-joint. Adjustable in height.

For attaching to handle-bars.

Price, plated.

4in. lens.. 5 11

Made so that it can be adjusted to any angle, with ball-joint. Adjustable in height.

Postage 4d.

THE "HUNT" REGD. COAT.

This coat is essentially a storm one. From the collar, where the opening is started under a watertight pocket, to the bottom the fastening is cut on a curve, so as to fall perpendicularly and down the side of the wearer when riding. This excludes the severest head storm, and gives the user a coat the equal of the sleeved poncho without its disadvantages. Pockets are placed not on the hips, where but little can be carried, and with inconvenience, but on the chest. The large one is pleated, and takes Bartholomew's lin. scale motor map, and has a small cash pocket within. On the other side is a smaller pocket, suitable for a "vest" screw-hammer and minor tools. The contest and trials rider will find this coat a boon, for by means of the push buttons used it can be fastened and adjusted while riding, notwithstanding the thickest gloves being worn.

Manufactured of Double Texture Paramatta, thoroughly waterproof, fitted with collar, wind and rainproof sleeves, ventilated under arms. Best guaranteed proofing. Length 36in. Stocked to fit chest 40in., 42in., 44in. (outside measurement).

PRICE, quality No. 1. 40/-
" " " " 2. 25/-

THE COWEY SPEED INDICATOR AND MILEAGE RECORDER (Guaranteed).

attached by any motorist, and once fitted requires attention or adjustment whatever. It will continue to render good service as long as it is attached to a cycle, for it is constructed throughout of the best and most suitable materials by expert British mechanics at Kew Gardens.

Price, in Nickel, 84/-, carriage paid.

Register speed up to 60 miles per hour. Mileage recorder up to 1000 miles. Then automatic starts again. The indicator can be easily attached by any motorist, and once fitted requires attention or adjustment whatever. It will continue to render good service as long as it is attached to a cycle, for it is constructed throughout of the best and most suitable materials by expert British mechanics at Kew Gardens.

THE EXCELSIOR WATCH AND HOLD.

Weather and dust-proof. Watch guaranteed stand vibration. Car wound and adjusted without removing from case or handle-bar. attaching to the handle-bar.

Price 5s. 6d. Postage 4d.

SPECIALLY PREPARED REPAIR BANDS.

For use on outside of cover after same has burst or been gashed. The outside edges are tucked inside rim, i.e., between rim and cover.

Price 1/-, postage 2d.

Motor Cycle Box Spanners. Containing six sizes, 1/2 tonny. English manufacture. Guaranteed.

Sizes 2, 3, 4, 5, 6, 7. Price 2/6 set, postage 4d.

THE AUXILIARY AIR INLET. Fits on inlet pipe. Gives a range of mixture. Useful hot day.

Price 3/6, postage 2d.

The Hunt Valve Spring Remover.

By means of the compound action the stoutest spring is easily raised by a slight turn of the winged nut, leaving both hands free.

Price, 2/6 post free.

PATENT CARBIDE AND WAX VESTA CARRIER. With lighting-up table. Will take two carbide. Fastened to frame with the ordinary pump clips. Price, nickel-plated, 1/6. Postage 4d.

Long Acre, LONDON, W.C.

RELIABLE ACCESSORIES AT
London's Lowest Prices.

THE HUNT ACETYLENE LENS MIRROR HEAD LAMP.

English manufacture. Width of front 4 1/4 in. Mirror 3 1/2 in. Weight 30 ozs., solid Brass or Nickel-plated. Copper riveted, powerful lens mirror, will throw a beam of light 150 yards, fitted with Bray's burner. Price complete, with generator, 19/11. Postage 6d.

Strong Tubular Carrier.

Size, 21 x 8 in.

Can be supplied to fit D or oval stays, with or without dropped ends. Price complete with straps, 6/6. Postage 6d.

THE HUNT MAGNETO COVER.

Manufactured of best patent leather, far superior to rubber as it does not crack or perish. Will fit all types of magnetos.

Price 2/3. Postage 2d. extra. Protects the magneto from dust, dirt, rain, etc.

THE HUNT DRAWER BAG.

Drawer Bag occupies a space underneath the carrier. Fastens with three stout straps on rail and ring lock on flap. Made of best leather. Drawer is lined with flaxite, and is strong and durable. Tools and spares are most accessible here. The drawer is provided with a stop to prevent it pulled out altogether.

THE HUNT SIDE-CARRIER BAG.

Two sizes. No. 1, 9 1/2 x 5 x 3 1/2 ins., price, 7/-. No. 2, 8 x 4 1/2 x 3 1/2 ins., Price 5/-. Postage 4d. is a strong bag specially designed to meet the requirements of the rider who prefers to carry his tools on the side, and use the carrier top for larger bags, complete, compact, and very accessible. Selected flaxite, lined flaxite, hand-sewn. It has end pockets and petrol cans, and is attached by metal clips.

THE SERPENTINE HORN.

An entirely new model, loud and penetrating. Gives off a deep, loud, lasting note, and can be heard from a great distance. Fitted with best rubber bulb and plated dust cover. Length, 11 in. Price 11/6. Postage 4d.

LONDON AGENTS FOR MILLS AND FULFORD SIDECARS.

A full range of 1911 Models now on view, stocked to fit all makes of machines. Immediate delivery. Prices from £8 6s. 0d.

THE HUNT BELT DRILL.

(Not Punch).

Drills a clean hole.

Very easy to manipulate.

Price 1/6, postage 1d.

Stocked to suit belts 1 1/2 in., 2 in., 2 1/2 in.

THE HUNT TOP TUBE GENERATOR BRACKET.

Supplies a long-felt want.

Adjustable to fit all standard tubes. Price (plated) 2/6, postage 2d.

DOUBLE MOTOR CYCLE LAMP BRACKET.

Suitable for two Lamps, or one Lamp and Generator. Sizes, 1 1/2 in. and 2 in. clips. Price, 4s. Postage 3d.

ARMOURD GAS LAMP CONNECTOR

THE HUNT ARMOURD LAMP CONNECTION. Will not break or perish. Supplies a long-felt want.

Price 1/- Postage 2d.

THE NEW MODEL MUD PROTECTOR.

With Side Wings.

Manufactured of best patent leather, strengthened with iron supports. It is attached by means of thumb screws to front mudguard, and can be fitted to any make of machine in one minute; protects both rider and motor from all dust and mud thrown up by the front wheel.

Price 5/- Postage 4d. extra.

BELT REMOVER AND PUNCH.

Made for all size belts. Price 2/-. Postage 2d.

THE HUNT RELIABILITY TOOL BAG.

Fits on tank top, over top rail of frame. Size: 7 1/2 x 4 1/2 x 6 ins. Price, with tool roll, 8/8, postage 4d.

At the request of many riders for a very accessible Tool bag which can be reached while seated on cycle, we have designed this pattern. The rider can open it, take out contents, and fasten it while riding, and its extreme usefulness in this connection has been proved in use in the Reliability Trials. Best leather, lined flaxite, metal fastenings to frame, and inside is a toolroll, which can be rolled up and secured complete to prevent rattling.

THE "TINOL" SOLDERING LAMP.

This handy appliance should be in every workshop. The "Tinol" Pocket Soldering Lamp supplies a long-felt want for a small, neat, and portable blow-lamp. It is an excellently contrived, nickel-plated lamp, without valves or parts liable to get out of order. It is thoroughly reliable, and explosions are impossible. The dimensions of the body of the lamp are 3 x 2 1/2 x 1 1/2 in. For use with methylated spirit. The lamp burns very quietly, and produces a flame of intense heat from 4 to 5 inches long. It may be carried with absolute safety in the breast-pocket ready for use. Price of lamp only 1/6, postage 2d.

"TINOL" SOLDERING PASTE

For use with the "Tinol" lamp. By the use of "Tinol" Paste Solder all metals, with the exception of aluminium, can be soldered or tinned without any previous cleaning or preparation, and without the assistance of a flux.

Price per tin, 6d. and 1/-, postage 1d.

THE 'PATCH-QUICK' REPAIR OUTFIT.

Motor cyclists will find this equipment a boon and a blessing, and will save themselves much leg-aching and heart-breaking by being able to repair their worst punctures, etc., within five minutes.

Price 3/-. post free.

THE HUNT SPARE BELT & TUBE CASE.

Holds spare belt in the outer compartment, and spare inner tube in the centre space. Size: 9 1/2 x 3 1/2 ins. Price 7/-. Postage 4d. Spare tube case only 3/1, postage 3d.

The Newest : : : Rubber-Studded Motor Cycle Tyre.

It's galling to be stopped by tyre trouble at any time; it's demeaning when the stoppage occurs in a busy street, and a crowd of curious children of all ages surround the rider.

Prevent this humiliation by fitting **THE CLIPPER RUBBER-STUDED TYRE**, which any experienced motor cyclist will allow is a first-class article, and exceptional value for the money.

The cover design is a good one, preventing slips and skids; and the thickness of the tread—shaped out of real rubber—protects the inner tube from the mishaps that lead to annoying breakdowns.

THE JUNIOR T.T. RACE.

Preliminaries.

AT 10 a.m. on Thursday the competitors in the Junior Race repaired to "Woodlands"—the start and finishing point of both races. For this purpose the place is not nearly so good as St. John's has been on previous occasions, as there is no nice open space in front, and the view is almost as restricted. The timekeepers and their assistants had a comfortable wooden shed built for them, but members of the press had to occupy a room in an unfinished cottage, which commanded a good view of the scoring board, but gave a very limited glimpse of the course. The position of the start was about one and a half miles from Douglas, and was just above the steep slope leading down to Quarter Bridge. Just after 10 a.m. the men were marshalled in more or less numerical order along a side turning known as Selbourne Road, and each machine was then examined to see if it complied with the regulations. Every machine was found to be in order except one of the N.S.U.'s, which had the end of the silencer taken out, and this was immediately ordered to be replaced. A heavy downfall of rain, which began just after lunch and continued till late in the evening, gave poor promise of a fine day on the morrow.

At six o'clock the same evening there was a meeting of marshals and competitors at the Sefton Hotel, at which the competitors were advised to express their views, and the necessary instructions were issued to the officials.

The marshals were instructed to keep under observation each machine as it drew up for replenishment, and to enforce the rule that only one attendant was allowed, who should only assist in the replenishment of the machine, all adjustments, repairs, or tyre changes to be done by the rider.

The Day of the Race.

It was, indeed, a pleasure to observe that the sun was shining brilliantly at breakfast time. An hour later at Woodlands, whither all concerned were to be found at 9 a.m., a rather cool and fairly strong south-westerly wind was blowing. Clouds, however, hung over Snaefell and South Barrule, but they eventually cleared away. The first

incident was the departure of the two judges, Messrs. A. Sharp and H. P. E. Harding, in company with Mr. C. Hughes Game, the chairman of the Highway Board, in a car, who went to see that the officials were at their posts. Next the depots were arranged in an excellent manner—in groups—so that all riders of one particular make had their stores placed next to one another. The machines were drawn up on either side of Selbourne Road, and when the time for the start approached the men were brought up by different marshals in their proper order. The start was in the hands of Mr. J. R. Nisbet, who was aided by Mr. R. D. F. Paul, while the two timekeepers, Messrs. F. Straight and C. P. Glazebrook, stood ready with watches in hand. There was a fair gathering of spectators at the start, but a still more numerous throng may be seen on Monday. All waited in silent ex-

Examining the machines at Woodlands, Douglas, on Thursday last. Mr. J. W. G. Brooker is measuring the tyres, while Mr. V. Hart takes the dimensions of the mudguards.

pectation as the minutes fled by, when at last ten o'clock came round, and punctually to the second the first man, Hugh Gibson (New Hudson), was given the word to go. He got away in good form, changing up as he disappeared from view. Haslam (Zenith Gradua) made an excellent start, his gear giving his machine splendid acceleration, though the engine was rather noisy. Gassert (N.S.U.) got away well, but dropped an oil tin off his machine as soon as he was in the saddle. Sain (Alcyon) started with some

The International Motor Cycle Tourist Trophy Races.—

difficulty with his stand down. Colver (Enfield) started easily on his high gear, Canale (Alcyon) had some difficulty in starting, and then stopped again farther down the road.

H. R. Fowler (New Hudson) made a good start, but Johnson (Humber) was not so fortunate. Bolton (Martin), Wright (Humber), Dixon (New Hudson), H. A. Collier (Matchless), Alexander (Rex), Evans (Humber), whose acceleration was remarkable, Douglas (Douglas), Martin (Martin), Slatter (Alcyon), who did better than his Gallic confrères, Weatherilt (Zenith), whose machine also showed splendid powers of acceleration, Fenn (Humber), Brown (Manx Humber rider), Kichham (Douglas), and Cox (Forward), all got away without incident. Drechsler (N.S.U.) missed fire at first. Corke (A.J.S.), Boldt (N.S.U.), and Wilberforce (Douglas) all started well, but Fletcher (Douglas) was not quite so quick in getting away, and he mounted on the right-hand side of his machine. C. R. Collier (Matchless) started amid the cheers of the crowd, who have now learned to respect his capabilities. Stevens (A.J.S.) and Grange (Humber) got away without trouble, but Bell's M.R. suffered misfiring. Greaves (Enfield), Griffith (M.R.), and Sirett (N.S.U.) started without difficulty. The non-starters were H. Heaton (N.S.U.), who smashed up his machine at the last moment, Stanley (2 h.p. Singer), who arrived too late to practise, and S. T. Tessier (2½ h.p. Bat).

Notable Spectators.

An interested spectator of the start was His Excellency Lord Raglan, the Lieutenant-Governor of the island, who afterwards watched the whole of the race from the time-keepers' box. Shortly after his arrival from the inspection of the course, Mr. Hughes Game informed us that the road was in splendid condition on the whole, though there was a small amount of greasy mud in some places under the trees.

A short wait, and a telephone message was received that Martin broke his valve lifter, and at Ballaghy his control wires came adrift and forced him to retire. Next the telephone announced that Gibson and Colver were the first men to pass Ramsey.

Bolton, another Martin rider, had to withdraw at Sulby owing to a broken frame. In this, the first lap, Drechsler and Alexander had to dismount on Snaefell. It was evident, even in this early period in the race, that Ballacrairie corner and Ballig Bridge presented no terrors to the competitors on this occasion, as the machines were naturally not so fast as those competing in the Senior Race. The wind was in favour of the men ascending Creg Willey's Hill, but against them on their way up the mountain road.

After nearly an hour Gibson was the first to pass the starting point, having gained a good deal on Colver, who had started after him. Wright (Humber) stopped to wire up his broken change-speed controlling rod. Boldt (N.S.U.) had had a tumble, and in falling lost a good deal of petrol, so he stopped to fill up. The first six at the end of the first lap were:

W. W. Douglas (2½ h.p. Douglas) passing Kirk Michael.

			m.	s.
1.	P. Weatherilt (2½ Zenith)	54	0
2.	P. J. Evans (2½ Humber)	55	0
3.	H. Gibson (2½ New Hudson)	56	26
4.	H. V. Colver (2½ Enfield)	55	55
5.	H. A. Collier (2 Matchless)	56	11
6.	J. F. Sirett (2½ N.S.U.)	56	14

In the next lap Gibson and Sirett were absentees, and of these the former suffered a broken big end ball bearing and the latter was reported to have magneto trouble. Sain and Canale, the two Alcyon men, were missing, while Griffith had engine trouble and retired at Ramsey. Bell had overheating troubles, fell off more than once, and was very late. Colver, who forged to the front before Creg Willey in the next lap, sheared his counter-shaft small

In the HIGH COURT OF JUSTICE

CHANCERY DIVISION.

AN ACTION for an injunction to restrain a certain Firm from infringement, and for the recovery of damages, has been commenced. Purchasers and Riders are hereby informed of the proceedings pending, and warned against buying or using infringing gears, or machines fitted with infringing gears.

ZENITH MOTORS, Ltd.,

of Weybridge, have taken this action for the purpose of protecting their rights to the well known

GRADUA GEAR.

The above warning is also extended to Manufacturers.

The N.S.U. on top in INDIA.

In competition with other machines of well-known make in Bombay Reliability Trials, a 6 h.p. Twin N.S.U. won the FIRST PRIZE with a performance of exceptional merit.

The following letter from Bombay states the facts.

Dear Sirs, 7th June, 1911.

It may interest you to know that in the Reliability Trials, held on Sunday June 4th last, under the auspices of the Bombay Motor & Autocycle Club, a Twin-cylinder, 6 h.p. N.S.U. ridden by Mr. J. Smith, Chief Engineer of the local branch of the Vacuum Oil Co., was the only machine to cover the entire course of the Trials, 130 miles, in an absolutely non-stop run.

The night before the trial it rained heavily and the entire length of the road outside of Bombay was in a very bad state, which makes the performance of the machine all the more creditable.

It is always at the top you find N.S.U. machines, because they have no superior in steady, powerful running, and qualities of endurance. In the recent London-Edinburgh Trials they gained TWO GOLD MEDALS, whilst the TRIUMPH CUP fell also to one of these famous mounts.

Write us for particulars of all models.

The International Motor Cycle Tourist Trophy Races.—

sprocket near Keppel Gate, and had to withdraw, while another incident was the loss by Boldt (N.S.U.) of one of the inlet valve tappets of his engine, so that he continued to drive with one valve working mechanically and the other automatically. A quarter-mile beyond Sulby Bridge Rem Fowler ran over a stone which pitched him off, injuring his knee and breaking his carburettor control, which he repaired with wire. The completion of the second lap provided plenty of incidents at the Douglas depot. Evans (Humber) was the first to stop for oil and petrol, and very heartily was he cheered as he left. H. A. Collier, Gassert, Haslam, Douglas, Fenn, C. R. Collier (who also tightened his belt), Stevens, Greaves, Boldt, Wright (who also tightened his plug terminal), and Slatter all stopped for replenishments, while Fletcher, who also stopped, went off in blissful ignorance with some spilt petrol alight on his machine which had been set fire to by the exhaust. A spectator got wildly excited, but all to no purpose, as the

Third Round Positions.

The order of the first six was:

			h. m. s.
1.	P. J. Evans (2 $\frac{3}{4}$ Humber)	...	2 43 26
2.	H. A. Collier (2 Matchless)	...	2 49 24
3.	D. Brown (2 $\frac{3}{4}$ Humber)	...	2 55 43
4.	E. Kickham (2 $\frac{3}{4}$ Douglas)	...	2 57 25
5.	K. Gassert (2 $\frac{1}{2}$ N.S.U.)	...	2 58 38
6.	H. J. Cox (2 $\frac{3}{4}$ Forward)	...	2 58 40

It was now not long before the winner would be known, but people felt fairly certain Evans would retain his lead, and every time a competitor appeared guesses were made right and left as to his identity. More excitement was aroused by Ross telephoning to say C. R. Collier had gained 3m. on the last lap, and when he did arrive everyone urged him to come on, but owing to several punctures, a faulty sparking plug, and a slipping belt, he did not complete the course. What the message really meant was that Collier had *lost* 3m.

Mr. J. R. Nisbet,

lap.

flame blew out in an instant. Johnson reported tyre troubles. Wilberforce stated he had had spills at Braddon Green and on the mountain. Wright, we were pleased to note, had made a satisfactory repair to his change speed rod. Drechsler arrived very late.

Second Round Positions.

The order of the first six was:

			h. m. s.
1.	P. J. Evans (2 $\frac{3}{4}$ Humber)	...	1 43 34
2.	H. A. Collier (2 Matchless)	...	1 53 23
3.	H. J. Cox (2 $\frac{3}{4}$ Forward)	...	1 57 56
4.	C. R. Collier (2 Matchless)	...	1 58 30
5.	E. Kickham (2 $\frac{3}{4}$ Douglas)	...	1 58 44
6.	D. Brown (2 $\frac{3}{4}$ Humber)	...	1 59 26

On the completion of the third round, the leader Evans, who was gaining ground, was heartily cheered, and H. A. Collier, who was holding second place, was going well. Incidents were now few and far between. Cox stopped for fuel; Dixon and Weatherilt came in almost together to replenish, while Weatherilt reported having lost ground through a broken petrol pipe. Drechsler stopped for petrol, and stated he had had tyre troubles. At this stage of the proceedings rain fell slightly, but soon passed over. Next came a telephone message to say that Evans had just passed Ramsey, and there appeared to be every chance of his winning. Many people then tried to excite Mr. H. Belcher, of Humbers, Ltd., but all efforts failed, and he succeeded in preserving quite an unruffled demeanour. Grange next passed with his stand down.

THE RACE FROM FIVE DIFFERENT POINTS.

A BRIGHT fine morning was a welcome change to the dismal conditions prevailing on Thursday. An hour previous to the start I set out from Quarter Bridge to take up my position on the steepest part of Creg Willey's Hill, as I started with the intention of seeing hill-climbing, high speeds, and corner work. The road surface was by no means dry, and under the trees it was just sufficiently tacky to call for cautious driving. However, the road was rapidly drying, thanks to a fairly stiff south-westerly wind. Through Union Mills and Crosby the going

As regards what happened on the other part of the course, Fowler's engine was knocking badly on the "goose-neck," Alexander dismounted on the same portion of the mountain road, and Wilberforce's two-speed gear seized up and caused him to be thrown over the handle-bars. Fortunately Dr. O'Rafferty was hard by, and, after examining him, he reported that the sufferer was more affected by shock than anything else. Tumbles were by no means rare, but poor Wilberforce's *contretemps* was the only really bad fall. He was removed on a stretcher hastily rigged up by the Boy Scouts.

As was anticipated, Evans finished an easy first, and was heartily received on his arrival; in fact, it was a most popular win. H. A. Collier, the second man, also received an ovation. Cox, who had the honour of being the first private owner to finish, came in third, and received an enthusiastic welcome. Evans made by no means a non-stop run, as his tool bag came off, he lost a spare belt, and had to stop to put up his stand, which had fallen. C. Collier suffered belt and other troubles. Douglas Brown, of whom the islanders were justly proud, stopped too soon and had to walk in, and curiously enough his petrol pipe union became unscrewed just as he pulled up. The second private owner to finish was another Humber rider, F. P. Johnson. Humbers, in fact, have done a performance of which they may be justly proud. They provided the winner, the second private owner, and all their team completed the course. Their new model was described for the first time five or six weeks ago, the engine having offset cylinders, side-by-side mechanical valves, flat-faced valve seatings, and a single ring to each piston. All the Humber machines had Armstrong-Triplex gears. E.M.P.B.

was not of the best, the road being twisty and moderately undulating, and also lumpy and pot-hole. Ballacraigne corner did not convey the same meaning to the competitors this year as last, the turn being a very gradual and easy one which could be taken at anything up to 35 m.p.h. In Glen Helen the roads were wet and heavy, but improved during the ascent of Creg Willey, and thereafter were almost ideal to Ramsey except for three long avenues which dried slowly, being protected from the drying wind by the thick foliage overhead.

The International Motor Cycle Tourist Trophy Races.—

I had just settled down after selecting a point of vantage 200 yards from the summit of Creg Willey when the official car passed, intimating that the road was closed. As I listened intently for the distant bark of Hugh Gibson's New Hudson—I felt confident that he would retain his lead—the noise of racing engines resounded through the air, and proved to be H. H. Bowen on a 3½ h.p. Singer and F. C.

it was dangling down in dangerous proximity to the rear wheel as he passed. Harry Martin, the next arrival, made the most noise, but was losing no time. W. W. Douglas's twin purred along very smoothly. E. Kickham (Douglas) held unconcernedly between his lips an unlighted cigarette. The Douglas riders, I knew, were not out to take risks with an idea of winning, but to make a good performance on their standard two-speed machines; all credit to them!

The sharp curve approaching Sulby Bridge. One of the most dangerous points on the course.

North on a three-speed Ariel, who were on their way to take up positions on the course.

The minutes dragged along slowly as I waited impatiently for the echo of the J.A.P. engine resounding in the glen below. At last I could hear the buzz of the engine, brought in waves by the following wind. What a crackle the new overhead J.A.P. has! Gibson came over the steepest part excellently on the direct drive, changing to top gear near the summit. He was closely followed by J. Haslam, who manipulated his Gradua gear to advantage, then K. Gassert (N.S.U.) followed within 100 yards.

A lighter and more continuous buzz signalled the approach of a fast machine, which overtook and passed Gassert on the steepest gradient with ease. It was Colver on the Enfield, which was travelling magnificently. Bolton (Martin), the next arrival, was going well, though his belt appeared very slack. Sain made a fine climb on his single-gearred Alcyon, but the rear mudguard was bouncing up and down alarmingly. Rem Fowler changed up too soon on his three-speed New Hudson, and had to change down again, whilst

H. J. Cox (Forward) struck me as going very promisingly. V. Wilberforce had a spare tube tied round his waist, which came adrift, and his *confrère*, G. L. Fletcher, rode alongside to acquaint him of the fact. Making a speech at 30-35 m.p.h. is not exactly an easy matter. A. J. Stevens (A.J.S.) made a steady ascent, and C. R. Collier (Matchless) passed, looking cool and unconcerned, as though a T.T. race were an everyday occurrence. H. Greaves (Enfield) had crept up a place, and W. E. Grange was obviously quite happy, waving his hand to friends as he sped up the 1 in 10 gradient on his Humber.

Then followed a long wait, so I walked briskly along the course for a mile and a half to beyond Cronke Voddy, where there is a slight decline and competitors accomplished their best speeds. Some struck me as not exerting themselves unduly, yet a mile of straight open road is where valuable seconds are gained. The best speeds I should estimate at 55 m.p.h. H. A. Collier was fiddling with his tool bag as he raced past, and the screwdriver and tools dropped out, so he pulled up and put matters right. I watched all the

An enthusiastic crowd at Ramsey watching the riders as they passed on their way towards the mountain road.

the little Humber ridden by Sam Wright simply bounded over the steepest portion. P. Johnson was not so fast on a similar mount. Good ascents were made by all the remainder with the exception of A. H. Alexander, who had to run alongside on two occasions until his Rex picked up speed. Fem managed to keep his Humber going by vigorous digs on the ground with his right leg. P. J. Evans (Humber) had not fastened his spare belt on the carrier securely, for

competitors at this point on the second round, the first arrival being H. V. Colver, whose twin was going better than ever. The time was 11.13 p.m. Four minutes later P. J. Evans passed, having overhauled ten competitors in one lap. Next in order of arrival were H. A. Collier, K. Gassert, and H. Rem Fowler. C. R. Collier was actually twenty-five minutes behind Colver, though he started but twelve and a half minutes later. These two old stable

The International Motor Cycle Tourist Trophy Races.—

companions were fancied by most to be likely winners.

Next I sped along a stony and rutty by-lane on my machine, which brought me out near the Devil's Elbow, then scurried along the coast road to Kirk Michael. Here I watched the riders on the third lap. Evans was now the leader, H. A. Collier being second and K. Gassert third. They were all apparently extending themselves in this lap, for the corners were being taken faster and closer, and the riders lay low, pushing their engines to the utmost. Practically every competitor who finished two laps came round a third time, twenty-four passing me in Kirk Michael.

Here I learned that a train was about to leave for Ballaugh, so I boarded this and came across Harry Martin, whose machine looked spick and span, but his retirement was caused by a broken valve lifter wire and a throttle

wire coming loose—what a trivial thing to cause a withdrawal! I was also told here that Kickham had pushed his machine into Ballaugh. Moving once again to Sulby Bridge I obtained my fifth view of the competitors, this time observing a splendid exhibition of corner work. However, no one took risks; some, in fact, were over-cautious, and lost much time. The Germans, however, were particularly fearless at the corners. Cox was the only one who came close to fouling the bridge, and just avoided a fall by pushing at the parapet with his hands. I was extremely sorry when A. J. Stevens misjudged the corner on the last circuit. He, along with Corke, had travelled most consistently throughout, but he quite under-estimated his pace, and charged the grass bank, which fetched off the driving chain and the rear cover. He was off again in five minutes, and was among the fourteen gold medal winners. G.S.

HAIRPIN, RAMSEY DEPOT, AND SULBY BRIDGE.

THE dual attraction of lurid cornerwork and gear changing led me to take up my position on the hairpin bend at the start of Snaefell climb.

Within a quarter of an hour no less than fifteen riders passed, headed, as was proper, by Hugh Gibson (No. 1). Their cornerwork was simply magnificent. Let it be understood that cornerwork in a 150 mile race and in a Kop Hill sprint are two entirely different things. At a timed short sprint you must snatch every fraction of a second you can; hence a ditch-shaving skid, a sensational recovery, a cloud of dust and a hundred hearts in a hundred throats are proper to cornerwork in a mile sprint. In a 150 mile race you must get round with a minimum of risk. It is the part of the machine to supply the speed; of the man to supply the restraint.

Hence I say the hairpin work was gorgeously magnificent. The men tackled the U in various ways. Some swung wide, some cut in, but every man observed supreme caution. They ran up to within 100 yards as fast as their engines could yank them; then up went the valves, and round they crawled, like mice suspicious of a bit of cheese. Once round, most of them slammed in a lower gear, banged their throttles open, and shot upwards with re-echoing exhausts—wonderfully reverberating in the roar of a tiny T.T. engine! As I have said, there were no thrills, no frame-twisting, no scraped back tyres, no ditch-shaving. Gassert (N.S.U.) was probably responsible for the finest corner. Weatherill undoubtedly picked up best above the U—his engine belled like a stampeded herd of a thousand bulls. Alexander was overheating, and his sprint alongside until out of sight was as plucky as it was pathetic. Though this cornerwork was magnificent, it was not spectacular—"valve-lift, semi-circular swerve, gear change, throttle slammed open," about expresses it. So when everybody had passed on lap 1, I tramped off to where I had left my machine in a by-lane, and went down to the Ramsey depot for lap 2; *en route* I was just in time to see Grange remount after a roadside adjustment.

A good crowd had lined the road at Ramsey depot, and was taking the keenest interest in it all. Everybody who passed was either a Collier or Douglas Brown (son of the proprietor of the *Isle of Man Times*). An assortment of the prettiest girls were obviously infatuated with a certain good-looking marshal. A horde of small boys continually proffered ha'pence for the red and blue air balloons which two wide-awake attendants had tied to the palings to inform their man where his petrol lay. I had barely joined the crowd before Colver shot in on his Enfield, and made a greased lightning replenishment of both tanks in fifty-four seconds. Graham

Dixon squeezed the adjustment of his valve-lifter, plus two tank fillings, into 110 seconds. Others were longer, and more than one had difficulty in restarting due to stretched lifter wires or adjusters having shaken loose. Weatherill actually managed to hold down the stiff spring of his overhead valve J.A.P. with the fingers of one hand—no mean feat!

Most of the men relied on the Douglas depot, and few stopped here, but those who ran through were slow, not having had time to recover speed after the twist at the entrance to Ramsey. When all the men were through I rode down the by-lanes to Sulby Bridge for the third lap. Here genial John Gibson was dividing his attention between a packet of sandwiches, a pair of field-glasses, a score of venturesome urchins, and his mount for Monday's race, a

brand new Rudge with the expanding engine pulley and rear belt rim. The corner work here was a repetition of that on the Ramsey hairpin—commonsense and caution personified—no thrills. Cox, on the Forward, was the only man I saw graze the parapet of the bridge, and he had two excellent excuses for being "rattled" as de Rosier calls it. It is exciting for an amateur to run high up in his first race, and two other competitors were hunting him hard.

On the next lap I heard Stevens completely failed to take the corner; the rest were slow, but sure. Perfect cornerwork of this character soon palls, and I returned to Ramsey depot for the fourth and last lap. The leading men were now separated by intervals which made alteration of the placings impossible, except through spills or serious

trouble. P. J. Evans passed through 8m. or more ahead, a lead which gave him time to free-wheel in from the Bungalow and win, if only his luck lasted till he reached the mountain top. By the roadside was a tall post, temporarily connected to the local telephone system, and Marshal Alec Ross stood with his ear glued to the receiver. At intervals his stentorian voice bawled out the Douglas news to the eager crowd: we heard how one by one the leaders had all climbed Snaefell Summit, and kept the order in which they passed us. Presently we were agog with excitement again, wondering whether all the members of the Humber team would finish. Sam Wright went through safely, and when later W. E. Grange on the sixth and last Humber roared healthily past the Humber attendants became pardonably and enviably hysterical. They tied two laths to the screen of their supply car, stretched an old sheet across, and rudely scrawled thereon with lampblack the legend "Humber wins!" Tying two or three gaudy air balloons on behind, they were ready for a triumphal procession into Douglas. B.H.D.

J. Haslam (2) h.p. Zenith) rounding the hairpin corner at Ramsey.

OBSERVATIONS ON THE MOUNTAIN CLIMB.

ONE of the most interesting points on the course from the spectacular point of view was "the goose neck." From here it was possible to obtain an excellent view of the machines from the moment they rounded the hairpin bend till they reached the summit of the steepest gradient above my vantage point. Moreover, additional interest was given by watching the manipulation of the various types of change-speed gears.

Although a mist prevailed for some time during the earlier hours of the morning, the sun eventually contrived to make its presence felt, and the roads rapidly approached their ideal condition. At twenty minutes to eleven a small dot was seen travelling at considerable speed from the hairpin. The machine proved to be Hugh Gibson's 2½ h.p. New Hudson, which rounded the corner well, if a trifle wide, and disappeared over the rise, while its rider energetically flooded his carburettor. Close on its heels followed Colver, the Enfield swinging round the corner well on its low gear.

The others followed in close succession. No sooner had one man disappeared in flame and smoke than another came up to the bend, changed smartly, if jerkily, to a low gear, and vanished. The winning Humber passed eighth at a very fast speed (he started seventeenth), hugging the corner at the approach side and swinging wide beyond.

Quite the most exciting ascents were made by the Zeniths, whose riders would come round the corner, then reduce their gear, whereupon, in every case, the engine would emit a tremendous roar, gradually sinking in key as the gear was raised. Slatter created a sensation by coming up well and fast, belching clouds of smoke the while. The gear changing as a whole was good, generally taking place above the bend during this round.

After the passing of Grange's Humber there was an interval, and a general comparison of notes meanwhile took place. Then the energetic boy scouts spied a machine in the distance. It stopped, however, about a quarter of a mile away, and after a five minutes' delay was restarted, and proved to be Bell on the M.R.

In the second round Colver passed first, taking the corner well and fast, with one leg scraping the ground, while Evans's Humber took the turn wide and was but a few paces from the bank. Drechsler made a splendid turn, as, indeed, did all the German competitors, whose riders had apparently made a special study of this corner. Rem Fowler showed signs of trouble, as he arrived extremely late in the round with his left knee bandaged.

In the third round a number of the competitors changed to a lower gear at the approach side of the bend, some changing up afterwards while still upon the gradient. Gassert gave an excellent exhibition of corner work, taking the bend without cutting out and without any signs of a falter. Quite a number took the corner close on the approach side, and came perilously near the gutter on the far side, one giving a wandering photographer perched on the said bank the shock of his life.

The riders now began to string out, as during the third round intervals of considerable length ensued. These intervals were useful, as they enabled the spectators to get up the usual wordy argument concerning the exact round in

which certain machines were and the accuracy of each other's watches—points which were loudly debated until Collier's Matchless broke into the argument with a roar, nearly suffering a bad skid by getting too near the ditch.

At this point the leading files began to mingle with the laggards, and lap four saw the arrival of the winning Humber, and H. A. Collier's Matchless before the passing of the tail of the third round. Just as the spectators were congratulating themselves that no smash of any description had occurred, Fenn's Humber roared up, took the corner hard, heeling over at an acute angle. He assisted as much as he could with his leg, but eventually came down against the far side bank. The engine raced for a moment, and an

P. J. Evans (2½ h.p. Humber) at the first bend after the Ramsey hairpin.

ugly twist appeared in the snaky exhaust pipe, and the handles, together with the footrests, showed signs of the fall. Fenn was away again without overmuch waste of time, but was obviously uncomfortable when his machine got going. Johnson's Humber ran by as Fenn was extricating himself, fortunately without going wide.

Most of the competitors seemed to be using their lowest gears on the approach side, and one or two emitted strange metallic noises and knocked ominously. Slatter's Aleyon passed still steady despite its single speed, but with a distinct ring about the spur gearing. The unfortunate Rem Fowler had still further trouble, as his machine failed, and, despite his wounded knee, he pluckily scrambled alongside for some distance. After the last man had passed a call came through for a doctor, as Wilberforce had jammed his change gear and been thrown. He was considerably upset by shock, although his injuries, we are glad to report, were not so serious as might have been expected.

S.H.D.

SPEED AND CORNER WORK.

AFTER a run round the course I decided that the best point for my first view of the race would be somewhere in the neighbourhood of Hilberry. I had a good view of the riders coming down the mountain, and how they did travel, too. After leaving Keppel Gate the road is decidedly rough to Craig-Na-Baa Hotel, after which the surface rapidly improves, and becomes perfectly ideal towards Cronk-Na-Mona, where there is a dead straight run of a good long mile down a gradient of 1 in 14. The Humber, particularly Fenn's, hummed down this stretch at an extraordinary speed, which cannot have been much short of 70 m.p.h. Colver's Enfield was equally speedy, but the second lap found him descending the hill not quite so fast and in dead silence with his engine out of gear. The N.S.U.'s, thanks to the weight of the riders and their great skill, came along very fast and smoothly, but it was obvious that they could have done with a higher gear for this part of the course, at any rate. Another who was very fast was Slatter, on the Aleyon, but it gave one furiously to think when one noted that the

wheels were inches out of track. Of exciting incidents hereabouts there were none, but on the first time round H. A. Collier and P. J. Evans had a heroic, and, as it turned out, prophetic struggle for a mile or two, the latter shooting ahead just before the corner, and taking it in a style that was pyrotechnically brilliant compared with Collier's quiet sweep round.

Cronk-na-Mona corner is nothing to speak of, but as it is fairly sharp and at the apex of two hills of opposite gradient, it is especially a turn that rewards clever corner work. In this respect Sam Wright, P. J. Evans, and W. Douglas showed themselves excellent. They nipped round it "all out" and away on the sky line towards Hilberry almost before one had time to jot down their numbers.

Hilberry Corner, a mile or two nearer the finish, is one of the "show" places of the course, but there was little doing here except a most commendable display of restraint, and it was quite clear that practice had demonstrated the advisability of doing this in preference to rushing at it, only to

The International Motor Cycle Tourist Trophy Races.—

The winner, P. J. Evans, with his 2½ h.p. Humber fitted with Armstrong Triplex gear.

pull up. Few riders checked their speed at all down the twisty, narrow road between Hilberry and Willaston, and a grand display of fine riding was to be seen, in spite of the tameness of the procession into which the race had developed by the time I reached this point.

A little more excitement was to be had at Willaston, which is without doubt the most difficult turn on the course, as it is both sharp and blind. There were a couple of tumbles here, to say nothing of numerous "very nearlies." Boldt took the corner too sharply, and came down pretty hard, following it up with a series of graceful rolls over and over. However, he was up like an acrobat, getting away almost before one could realise what was afoot. Slatier also

The first single cylinder and second to finish, H. A. Collier (2 h.p. Matchless-Jap), who also used an Armstrong gear.

Fowler came down the hill neck and neck, with the former rapidly overhauling the latter. They were practically a dead heat at the turn, when Corke, who could easily have cut across in front, with most commendable restraint hung back so as to avoid any possibility of baulking Fowler, and afterwards succeeded in catching him up. Another neck and neck at the corner was put up by Sam Wright and Fletcher, both of whom actually took the corner as if joined by coupling rods. The width, however, after the turn was insufficient for the redoubtable Sam, who promptly ran over the grass bank on to the footpath, upon which he ran a few hundred yards, and succeeded in finding a soft place for diving across into the road again. The most hair-raising performance was accomplished by one of the N.S.U. riders, who by opening up his throttle to the full when just about to take the turn made his little machine fairly leap, and it was as much as he could do to get round, but he wisely steered into the grass gutter to prevent a skid, and got away without having to slow down at all.

W.G.A.

Harold J. Cox (2½ h.p. Forward), who finished third, taking in petrol at the Douglas depot.

took a toss by slithering across the road, and a number of others took the turn far too wide, some of them performing rather badly. Alexander cut across in fine style, scraping the road with his belt pulley guard. Wilherforce, whose tumbles bad by no means improved his face, came along very warily, and so did Evans, who with several minutes in hand was wisely refraining from running any risks. Gassert by leaning well over swept round the fastest of all. J. D. Corke and Rem

INTERVIEW WITH THE WINNER.

P. J. Evans, who was the popular winner of the Junior Tourist Trophy Race, is quite a novice as regards road racing. He is a well-known motor cycle agent in Birmingham, and up to the present has devoted his attention chiefly to local club competitions. Meeting him at the conclusion of his splendid ride, we exchanged the usual greetings, and asked him how he had fared.

"Quite nicely," replied Mr. Evans. "Naturally, I had to slow up for the corners, but the course, which is not too terrible if taken carefully, did not cause me much trouble, though, as you know, I did not make an absolutely non-stop run."

"Had you many exciting experiences?"

"No," replied our victim, "except that I had no foot brake for the last part of the course, and had to rest my foot on the silencer. You see the sole of my boot is half burnt away."

"You look pretty fit after your strenuous ride?" we ventured.

"Yes," replied Evans, "and I feel it."

"What gears did you use, Mr. Evans?"

"The ratios were 4, 6, and 8½ to 1."

"And did your gear give you any trouble?"

"No, not the slightest. I consider it to be nearly perfect."

As Evans had sprung to fame suddenly from comparative obscurity, others monopolised him, and we were forced to renew our congratulations and say good-bye. Noteworthy features of his driving were his consideration for others, his calmness, skill, and caution.

* Fastest lap.

There were twenty-five belt-driven, five chain-driven, and four chain and belt-driven machines in the race.

There is a feeling that this year's T.T. Race will be the last, but at the trophy presentation Lord Raglan spoke in terms which infer that there is no truth in this rumour.

We are indebted to G. N. Higgs for the assistance he rendered to various members of our staff by conveying them to different points along the course, also to Douglas Bros., the New Hudson Cycle Co., and Humber and Co. for placing machines at our disposal during the race week. These machines did much valuable work.

The number of survivors is distinctly good, as out of thirty-four starters twenty-one finished. The winner's average speed was 41 1/2 miles per hour, the second 39 3/4 m.p.h., and the third 38 m.p.h. P. J. Evans's fastest lap, 53m. 34s., is equal to a speed of 42 miles per hour.

It was noticeable that a large percentage of competitors used Hutchinson tyres, including the rider of the fastest single-cylinder machine, who finished second.

Harold Cox, the third in order of merit and first of the private owners, used a carburettor of his own design—known as the C.A.P.—on his twin Forward.

The equipment of Evans's winning Humber was as follows: B. and B. carburettor, Armstrong-Triplex gear, Bosch magneto, Lyso belt, and Continental tyres, while Shell spirit and Price's oil were used.

All connected with Humber were naturally jubilant over their victory, and their exuberance of spirits found vent in a practical form. Obtaining a sheet, they wrote on it in large letters, "Humber wins," and attached it to the front of the screen of their car by means of laths. Further decorations were added in the form of gaudy air balloons, which were allowed to stream out behind as the car with its happy group of occupants wended their way from the replenishment station to Douglas.

THE SENIOR T.T. RACE.

A Magnificent Triangular Contest.

Three Competitors lead at intervals.

C. R. Collier finishes second and is disqualified, along with De Rosier.

General view of the crowd at the starting and finishing point at Woodlands.

ON Monday a bright sunny morning with a cloudless sky gave promise of a magnificent race, under the most favourable conditions, which expectation was fulfilled. Excitement in this event had almost reached fever heat, and there was no doubt that the higher-powered machines commanded the most attention. Practically everyone had a favourite, and strangely enough they were in the majority of cases different riders. It is a fact that there were nearly a score of riders tipped as probable winners by even trade prophets, which rendered the event all the more interesting, and keenly anticipated. People spoke with bated breath of the terrific speed of De Rosier, Godfrey, and Moorhouse on their Indians, and the Collier brothers and their Matchless machines, the likelihood of Philipp and his Scott getting home first, and the corner

work of the fearless Bat trio—W. H. and J. T. Bashall and H. H. Bowen. Nor were these all, for some confessed astonishment at the speed of some of the single-cylinders, and were even sanguine of success. The four Ariels had created an excellent impression, the two Premiers were running as no single-cylinder Premier has run before, and the Rudge men with plenty of experience of the course, and the Singers were all regarded as dangerous opponents of the Triumph, which machine has only once been ousted from its position as first single-cylinder. Nor were the new pattern water-cooled single-cylinder Rex machines without their supporters. There was a large crowd at the starting point at Woodlands, and also at the petrol and replenishment depots, one immediately beyond Quarter Bridge—half a mile from the start, the other at Ramsey.

B. V. Jones (on his 3½ h.p. Premier) starting from Woodlands, followed by S. C. Perryman (3½ h.p. Ariel) and H. A. Collier (4 h.p. Matchless).

The International Motor Cycle Tourist Trophy Races.—

A. Boldt (N.S.U.) and C. R. Collier (Matchless) at Cronk-ny-Mona.

A Punctual Start.

The competitors were marshalled along a by-road, and punctually at 10 a.m. the holder of the trophy—C. R. Collier—was given the word to go, and as he pushed his machine along to start he received a tremendous ovation. His engine fired promptly, and he was soon over the brow of the hill, at the foot of which lies Quarter Bridge and its right angle corner. Charlie had one thing to be thankful for, he had no dust until he caught the tail end of the procession. At half-minute intervals the remainder followed to the number of sixty, the non-starters being W. Houghton ($3\frac{1}{2}$ Rudge), E. V. Stevens ($3\frac{1}{2}$ Dot), who broke his leg in practice, W. E. Grange ($3\frac{1}{2}$ Bradbury), and J. Woodhouse ($3\frac{1}{2}$ Ivy Precision), who were disqualified for presenting their machines for examination after time, J. H. Slaughter ($3\frac{1}{2}$ L.M.C.), whose engine was not running well; J. Healy ($3\frac{1}{2}$ Rudge), who was withdrawn by Rudge-Whitworth in consequence of the unfortunate accident to V. J. Surridge; and W. L. T. Rhys (4 Bat), who damaged his machine in practice.

Before the start C. R. Collier broke his exhaust lifter wire, but was able to replace it in time, whilst J. Prendergast pulled out the nipple of the wire controlling his two-speed gear. Especially good starts were made by H. A. Collier (Matchless), Edmond (Premier), and Newsome (Triumph). C. E. Murphy and J. A. Carvill, amateur riders of Triumphs from the Green Isle, received a big cheer. H. H. Bowen (Bat) took mighty strides, slipped, and almost fell. The diminutive but intrepid Godfrey pushed slowly on the low gear for some yards, but once in the saddle accelerated in wonderful fashion.

W. Creyton (Triumph) trod on the brake in mounting, and promptly brought his machine to rest. J. L. Norton, the eldest competitor, received an extra special cheer. Philipp, in violet coloured leather costume to match his Scott, shot away from the mark at the word to go and was quickly out of sight. De Rosier's attire was even more striking, for he wore black tights, running shoes, and a light blue woollen hat. He got away well. The brothers Bashall made fine starts on their Bats.

Once there was a funny incident. A dozen competitors were spread across the road awaiting their turn to start when there was a cry that a competitor was approaching—de Rosier, someone yelled. There was a sudden stampede of competitors, marshals, judges, and timekeepers, who retreated helter-skelter to the roadside, only to find that it was a ruse, for less than 30m. had elapsed.

Sproston, on a Rudge, demonstrated in how short a distance an engine will fire, and the wonderful acceleration powers of a good $3\frac{1}{2}$ h.p. in combination with a three-speed

gear. The last rider to start—B. Plews ($3\frac{1}{2}$ h.p. Calthorpe)—ran for sixty yards before his engine would fire. The names of the starters and details of the machines they rode are given on a subsequent page.

Early Incidents.

Once all the competitors were on their way, spectators turned to discussing the chances of the leaders. A. Boldt (N.S.U.) suffered a temporary stop at Ballacraigne, announced Mr. J. R. Nisbet through the megaphone. The gap between the departure of the last competitor and the arrival of the first on the second round was not great, but the moments dragged slowly. The impatience of the crowd was relieved by a message from Ramsey that No. 1 (C. R. Collier) had passed, and, shortly afterwards, eyes were strained to catch a glimpse of him drop down Bray Hill half a mile from the starting and finishing banner. The enthusiasm had certainly never been equalled in any previous race. For one thing, the race was more of an international character than any other held hitherto, for not only were the English and American champions engaged, but also a team of Germans, who were certainly going very well, and a Frenchman.

Forty-four minutes and no Collier, forty-five and still absent, forty-six and a cry went up as he swept round the Hilberry corner, and shot full speed down Bray Hill, and literally flew over the line in 46m. 33s. The course measured $37\frac{1}{2}$ miles, and it had been said that laps were covered in 43 and 44 minutes in practice, but this amateur timing was now doubted. Collier was noticeably being bumped about considerably on the rough surface at the summit of Quarter Bridge hill. A gap of two minutes, and Quentin Smith (Triumph) roared past, having completed his lap in 48m. 45s., and passed H. Rem Fowler ($3\frac{1}{2}$ h.p. Ariel). Two competitors now approached in "Indian file," and though B. V. Jones (Premier) crossed the line first, F. A. Applebee buzzed past him on his two-stroke Scott within 100 yards. O. C. Godfrey (Indian) was to the eye fastest by the press box, though his time proved to be exactly the same as C. R. Collier's—46m. 33s. Edmond (Premier) pulled up as he crossed the line, and yelled out for a knife to cut his legging adrift. De Rosier was travelling magnificently, and had picked up several places. His time was 46m. exact—the best so far. Elce (Rudge) and North (Ariel) raced down the hill neck and neck, the former crossing the line fifty yards ahead. Adamson (Triumph) was the fastest of the single-cylinders in this first lap. Weatherilt (Zenith) suffered a burst tyre, and lost some minutes replacing the tube. As Sproston (Rudge) raced

John Gibson (Rudge) and Jake de Rosier (Indian) turning off the mountain road.

The International Motor Cycle Tourist Trophy Races.—

C. B. Franklin (Indian), second place, and F. A. Applebee (Scott)
on the road to Snaefell.

past it was noticed that his toolbag had jolted open. His time of 48m. 59s. was exactly the same as Lister Cooper's, and strangely enough they started together. Alexander, on the water-cooled Rex, stopped half a dozen yards from the finishing line, and reported that his engine ball-race was damaged and squeaking. After talking with Mr. W. Williamson for a few minutes he continued.

The leaders at the end of the first lap and their times are as under :

FIRST LAP.

	m.	s.
1. Jake de Rosier (3½ Indian) ...	46	0
2. {C. R. Collier (4 Matchless-Jap) ...	46	33
{O. C. Godfrey (3½ Indian) ...	46	33
4. A. J. Moorhouse (3½ Indian) ...	47	19
5. F. A. Applebee (4 Scott) ...	47	33
6. C. B. Franklin (3½ Indian) ...	47	48

In the initial round, W. H. Bashall (Bat) stopped twice to fit new belts. T. L. Rankin (Singer) charged a wall a quarter of a mile past Sulby Bridge, and was taken to Ramsey Hospital suffering from serious injuries to the skull, besides a broken ankle. G. E. Stanley (Singer) and J. Gibson (Rudge) fell in negotiating Sulby Bridge—always a stumbling block—but immediately continued. C. E. Murphy (Triumph) suffered from plug troubles, and after using all his spares was obliged to withdraw. The ranks of the Bat were soon depleted, for H. H. Bowen damaged a front big end at Creg Willey, and though he did his best to keep going was forced to retire at Sulby. H. Martin (Singer) and R. Lord (Rex) punctured.

The Second Round.

C. R. Collier retained his position at the head of the procession, and had already passed several of the stragglers. His time was an improvement of his first circuit, but probably only the difference between a standing and flying start. Later it was reported that he had filled up with petrol at Ballacraigne, and talk of disqualification ensued, as the rules stated that petrol must only be taken at the depots at Ramsey and Quarter Bridge. H. A. Collier also mysteriously ran out of petrol in the second round, though he told us that in practice the tankful would carry him for three rounds. Unsuspecting the real trouble, he took off the petrol pipe to clear it before he traced the absence of petrol. Quentin Smith (Triumph) was only a minute or two slower than Collier, and was riding in first-rate

style. Then followed a succession of competitors, all going at high speed. De Rosier lost his first place owing to the fact that he slowed considerably, whereas C. R. Collier improved. Already there was a thinning in the ranks and the gaps were longer. Creyton was seen to pull up fifty yards from the banner and glance at his rear tyre, telling an attendant that he had punctured and stopped because he imagined the tyre was going down again. Godfrey was a few seconds slower in this lap. A rider who was going in fine style was Albert Berlie on a new model M.R. with overhead valves and bore and stroke of 63 by 80 mm. But for the fact that his three-ply leather belt pulled through at the fastener three times he would have had to be reckoned with in the results.

SECOND LAP.

	h.	m.	s.
1. C. R. Collier (Matchless) ...	1	32	29
2. Jake de Rosier (Indian) ...	1	33	13
3. O. C. Godfrey (Indian) ...	1	33	27
4. C. B. Franklin (Indian) ...	1	34	53
5. A. J. Moorhouse (Indian) ...	1	36	45
6. F. A. Applebee (Scott) ...	1	36	52

Involuntary stops were suffered by R. Lord (Rex), who cut his back tyre clean through between Crag-na-baa and Hilberry; J. R. Alexander (Indian), who fell near Willaston, cut an ugly gash in his knee, and damaged right grip control; A. Boldt (N.S.U.) fell at Quarter Bridge; Stanhope Spencer (Rudge) fell at Sulby; J. L. Norton (Norton) seized piston at Ramsey; B. V. Jones (Premier), shortage of petrol, due to leaky tank, pushed into Ramsey; W. F. Newsome (Triumph), puncture; P. Weatherilt (Zenith), puncture; Howard Smith (Triumph) changed plug. H. Collier, W. H. Bashall, and Q. Smith replenished with petrol. The Armstrong gear of F. G. Edmond's Premier refused to hold on the second and top gears, so he retired, as also A. J. Sproston (Rudge) with timing gear trouble and G. E. Stanley (Singer), who fell at the last corner on the second lap.

The Third Lap.

In lap 3 C. R. Collier again stopped for petrol, but recorded a time of 48m. 16s. At Quarter Bridge several competitors had narrow escapes, one or two running on to the pathway. P. Brewster (Norton) fell, but scrambled up again, and was off in a moment. Later his three-speed gear seized when travelling at full speed down the mountain, this and Edmond's, we believe, being the only gear troubles. Taylor dropped the end of the silencer off his Rudge, P. Weatherilt had to inflate his tyre again, Howard Smith had perforce to use a third plug, Lister Cooper ran out of petrol, and W. F. Newsome stopped for some mysterious reason.

Frank Philip (4 h.p. Scott) at full speed, just past the hairpin bend at Ramsey.

The International Motor Cycle Tourist Trophy Races.—

The winner, O. C. Godfrey (Indian), passing over Ballaugh Bridge.

near the Bungalow. Newsome first took out the plug, which was found all right, then dissected the carburettor (likewise all right), and on reassembling the engine started immediately. Frank Philipp (Scott), who was known to have covered laps in practice at 46 mins., accomplished the fastest circuit in this lap—time, 44 mins. 52 secs., equal to a speed of over 50 m.p.h.

THIRD LAP.

			h	m.	s.
1.	C. R. Collier (Matchless)	2	20	45
2.	O. C. Godfrey (Indian)	2	21	39
3.	J. de Rosier (Indian)	2	21	52
4.	C. B. Franklin (Indian)	2	23	25
5.	A. J. Moorhouse (Indian)	2	26	45
6.	Hugh Mason (Matchless)	2	29	8

The Fourth Lap.

C. R. Collier lost his lead in this lap owing to a puncture, but Godfrey recorded a very fast lap, and now led by 2m. 1s. over Franklin, who was improving, and 2m. 7s. over the former leader. On this round the great de Rosier was held up at the Ramsey control with inlet valve and plug troubles, and the delay of 20m. which ensued settled his chance, even if he had not committed a breach of the rules by procuring extra spares. W. H. Bashall (Bat) again had to replace a belt. H. Lister Cooper broke a valve near Hilberry, W. F. Newsome punctured, G. Fenton (Zenith) changed a plug, the magneto sprocket of Eric Myers's Scott slipped, whilst Frank Philipp passed with his engine running on one cylinder. He afterwards reported that one of the pistons had turned round in the cylinder. F. Mackay (Singer), who had been travelling very consistently, punctured in this lap, and W. Creyton (Triumph), last year's first

C. R. Collier (on his 4 h.p. Matchless) rounding the corner in Ramsey.

single-cylinder rider, had the compression tap blow out, and thus settled his chance.

The leaders on this round were:

FOURTH LAP.

			h	m.	s.
1.	O. C. Godfrey (Indian)	3	9	12
2.	C. B. Franklin (Indian)	3	11	13
3.	C. R. Collier (Matchless)	3	11	19
4.	A. J. Moorhouse (Indian)	3	16	12
5.	H. A. Collier (Matchless)	3	19	44
6.	J. A. Carvill (Triumph)	3	25	57

The last lap was the most exciting of the lot, for it was still anybody's race, and a short involuntary stop by any of the leaders would settle the destination of the Tourist Trophy for another year. It was to be a duel between two Englishmen, C. R. Collier and O. C. Godfrey, though both of them afterwards admitted to us that they did not know their respective positions. Could Collier pull back the time he had lost in replenishing with petrol and repairing his tyre? The suspense was an anxious one for many. "No. 1, C. R. Collier, has passed Ramsey," hawled out the holder of the megaphone. Meanwhile, de Rosier passed with still another lap to go.

A few minutes' wait and another message said that Collier was safely round Willaston Corner, which only increased the

J. A. Carvill (Triumph) and A. Boldt (N.S.U.) about to round Bray Hill corner, half-a-mile from the finish.

buzz of excitement, and in a moment or two he was seen travelling at a tremendous speed, and he flashed past the post, never having been passed. But it was noticed that his rear tyre was almost flat. Now the question was, would Godfrey remain consistent in his lap times to the end? He started about ten minutes after C.R., and with another fast lap could win. No one could tell yet as to who would win. Watch in hand, Mr. H. H. Collier, the senior of the Matchless firm, counted each minute, the crowd straining their ears to catch the distant roar of Godfrey's Indian. "Here it is," the cry went up, as Godfrey swooped round the bend and covered the remaining distance at an awe-inspiring speed, a winner for the first time by 1m. 3s. Though his mount is a foreign one, Oliver C. Godfrey is an Englishman bred and born.

The six leaders are given hereunder:

THE FIFTH AND FINAL LAP.

			h	m.	s.
1.	O. C. Godfrey (Indian)	3	56	10
2.	C. R. Collier (Matchless)	3	57	13
3.	C. B. Franklin (Indian)	3	59	52
4.	A. J. Moorhouse (Indian)	4	5	34
5.	H. A. Collier (Matchless)	4	9	42
6.	Hugh Mason (Matchless)	4	15	35

The depot at Ramsey. Lister Cooper (3½ h.p. Triumph), and F. Philipp (Scott), stop to make an adjustment.

Quite a number had not completed their fourth lap as the winners completed the full distance—187½ miles.

In the last lap, Howard Smith, still unfortunate, replaced a belt and the thread of his 1910 pattern carburetter stripped, which meant that he had to hold the carburetter on to the engine for some miles. Lister Cooper covered his final lap without trouble. F. P. Johnson (Matchless) had trouble on Snaefell with his variable engine pulley, which heated up so much that it was as black as the cylinders when he finished. Weatherill had another stop to inflate his rear tyre. F. Mackay fell and damaged his Singer, putting both brakes out of action, but he pluckily finished. In all there were twenty-eight survivors.

All the leaders were loudly applauded by the big concourse of spectators for their plucky exhibition, whilst willing officials rushed forward to wheel their machines off the course for the final examination.

All the engines were found to be of correct size, and we noticed particularly the good condition of the machines at the conclusion. Every part fitted beautifully after dismounting the cylinders for verification of the measurements. It was not a doubtful win. The leading machines could have stood a very much longer test despite the severity of the course, although all the leaders except C. R. Collier said that they were heartily glad when the five laps were completed.

C. R. Collier and de Rosier Disqualified.

Subsequently a protest was lodged by C. B. Franklin and A. J. Moorhouse against C. R. Collier on the grounds that he infringed one of the regulations by taking in petrol at a point other than the recognised controls. The judges—Messrs. H. P. E. Harding, Victor Hart, and Archibald Sharp—considered the protest and decided that it be

W. F. Newsome (3½ h.p. Triumph) rounding the hairpin bend near Ramsey.

The International Motor Cycle Tourist Trophy Races.—

upheld. The same fate befell Jake de Rosier for fitting new parts not carried on his machine.

It will be seen from our table of results that it was a field day for variably-gear twin-cylinder mounts, which type of machine scored heavily. The first six home had V type engines and change-speed gears. The first single-cylinder machine was a Triumph ridden by J. A. Carvill, a successful Irish rider. He used a single gear of $4\frac{1}{2}$ to 1, and experienced no trouble of any sort, except for the engine suddenly pulling up in the first round. He was well backed up by Quentin Smith, the Manxman, and H. Lister Cooper, who suffered very hard lines. G.S.

SENIOR T.T. IMPRESSIONS.

MY movable positions in the Junior T.T. had proved so satisfactory that I adopted a similar policy in the Senior, and at the start of the race stationed myself on the Ramsey hairpin. Charlie Collier was not long in appearing, and had gained 2m. on Quentin Smith, who, in turn, had left Rem Fowler behind. Harry Collier had already picked up three places, and other men who were clearly passing up through the field were Applebee (4 h.p. Scott), who had gained three places; Franklin (Indian), four places; Carvill (Triumph), four places; Godfrey (Indian), eight places; Creyton (Triumph), eight places; Moorhouse (Indian), eleven places; Philipp (Scott), fifteen places; de Rosier (Indian), eleven places; and Mason (Matchless), fourteen places. The men, like the Junior riders, showed excessive caution, only Howard Smith and Nixon having spills, and Nixon made a lightning recovery, so that he hardly lost a second; he was warmly cheered. Poor Prendergast broke the wire actuating his N.S.U. gear, and being unable to negotiate the mountain road on his 4 to 1 top gear, had thus early to retire. What I saw at this hairpin convinced me that a twin-cylinder victory was inevitable. Almost all the singles "conked" badly after negotiating the bend, and even when the knocking ceased their acceleration was not speedy. I saw very little gear changing, and it struck me that the two-speeded men were finding their low ratio too slow and their high ratio too high.

It will be remembered that in a separate hill-climb after the races last year Newsome defeated all the big twins when he was able to suit his gear to the gradient. But this year the singles were obviously over-gear for the mountain, and for some reason few of them used their low speed. I imagine that practice had shown either that the low gears were too slow, or that the high rate of r.p.m. was too severe on the engines. At any rate, only the men with multi-speed gears such as the Matchless or Zenith, appeared to go in for a change. With the twins the case was utterly different. They rounded the bend nicely, and shot off with thunderous reverberations. The Indians and Scotts performed best; the Matchless machines knocked a little in the initial stages of picking up. One great disappointment befell us, namely, the absence of Bowen on his Bat; we had trusted him for a couple of sensational laps at the least, and faintly hoped for a smashing win if he dodged Nemesis at the bad corners.

After the first lap I went down to the Ramsey depot, where the large entry had made things uncommonly busy. I had scarcely arrived before Charlie Collier roared past at phenomenal speed. His brother and Quentin Smith were close together 5m. behind him. Smith replenished his petrol tank in the record time of 24s. It was already clear that the single-cylinders were hopelessly out of the hunt, and that only the Indians and Scotts could beat the Matchless if the Colliers' proverbial luck held out. Franklin, Godfrey, Moorhouse, and de Rosier were a trifle behind Charlie Collier on nett time, as also was Philipp. The Scotts were rather handicapped by their heavy consumption of oil and petrol, and their refills were slow, and occupied 1½m. on an average. Poor B. V. Jones pushed in from the entrance to the town, having sprung a leak in his petrol tank. Luckily it was near the top, so he was able to proceed, but he had to fill up once in each lap. Here we found Murphy, who had already used up the three sparking plugs he carried, and was forbidden by the rules to borrow more. Norton presently joined him with a seized piston, and news filtered through that Rankin had been badly injured in a collision with a wall near the Sulby Hotel, and was now lying in Ramsey Hospital.

PRESENTATION OF THE TROPHY.

The trophy was presented by His Excellency the Governor-General of the Island, in the presence of a large crowd, and the winner, O. C. Godfrey, was loudly cheered. When Mr. Nisbet announced that the second was C. B. Franklin, the crowd did not hesitate to show their disapproval of the A.C.U. judges' decision to disqualify Collier, though Franklin was well received. A. J. Moorhouse, the first private owner on a twin, was vociferously cheered. Subsequently, Mr. H. H. Collier, sen., was chaired and carried around the Ball Room shoulder high, amid great scenes of enthusiasm.

Proceeding down the by-lanes to Sulby Bridge, I found poor Bowen in a heartbroken condition, his front cylinder big end having commenced to give trouble on Creg Willey, and finally collapsed at Sulby. The corner work on the ill-famed bridge was fast and good, de Rosier and the Scott team being star artists. Stanhope Spencer took a bad toss, but savagely kicked all bent parts straight, and roared off within two minutes. Johnson nearly mullered the corner, as he was bending down adjusting some detail, but he saved himself magnificently at the last minute.

Returning to the Ramsey depot, to my astonishment I found the redoubtable Jake in trouble with his footrest, rear inlet valve, and rear sparking plug. He was very shaky, and quite unfit for mechanical adjustments, and after wasting a lot of time and breaking the rules, despite official protests, by taking a nut and a plug from his attendants, he departed very late. Hard luck! One's sympathy goes out to a visitor.

Willaston Corner, a left-hand turn at right angles. F. P. Johnson (Matchless) glances round at a competitor overtaking him.

and his terrific speed and beautiful riding position had won universal admiration. J. R. Alexander had taken an ugly toss; his knee was cut, his footrests gone, and his right grip control of ignition and valve lift disorganised. John Gibson, who had previously been well up amongst the singles, lost 20m. replacing a stretched exhaust valve. Interest now centred on the Matchless-Indian duel, and great was our patriotic jubilation when Charlie Collier passed with 45s. in hand of Godfrey, as far as we could tell; but wise heads wagged ominously, for Charlie Collier had been driving furiously on the two concluding laps, though dogged by trouble, and had presumably nothing left up his sleeve, whereas Godfrey hurtled past at a greater speed, and we knew he had Collier beaten on the mountain. Ere long the—to Englishmen—mournful news came through that Godfrey had picked up 108s. on Collier between Ramsey depot and the finish; so we were left to congratulate an English victor, even if he rode a foreign machine. This should atone for Lee Evans's somewhat unlucky defeat in 1909. B.H.D.

The remainder completed laps as follows :

FOUR LAPS.

H. Rem. Fowler (3 $\frac{1}{2}$ h.p. Ariel), Armstrong 3-speed gear, belt, single-cylinder.
 S. C. Perryman (3 $\frac{1}{2}$ h.p. Ariel), Armstrong 3-speed gear, belt, single-cylinder.
 W. Johnson (4 h.p. Matchless-Jap), Matchless variable gear, belt, twin-cylinder.
 K. Cassatt (3 $\frac{1}{2}$ h.p. N.S.U.), N.S.U. 2-speed gear, belt, single-cylinder.
 *F. Philipp (4 h.p. Scott), Scott 2-speed gear, chain, twin-cylinder.
 W. Johnson (4 h.p. Matchless), Matchless variable gear, belt, twin-cylinder.

THREE LAPS.

Eric Myers (4 h.p. Scott), Scott 2-speed gear, chain, twin-cylinder.
 Vernon Taylor (3 $\frac{1}{2}$ h.p. Rudge), Rudge variable gear, belt, single-cylinder.
 W. Croyton (3 $\frac{1}{2}$ h.p. Triumph), single gear, belt, single-cylinder.
 W. H. Elce (3 $\frac{1}{2}$ h.p. Rudge), single gear, belt, single-cylinder.
 P. Brewster (3 $\frac{1}{2}$ h.p. Norton), Armstrong 3-speed gear, belt, single-cylinder.
 J. W. Adamson (3 $\frac{1}{2}$ h.p. Triumph), single gear, belt, single-cylinder.

TWO LAPS.

R. Nixon (4 h.p. Matchless), Matchless variable gear, belt, twin-cylinder.
 G. Fenton (3 $\frac{1}{2}$ h.p. Zenith-Gradua), Gradua variable gear, belt, single-cylinder.

ONE LAP.

F. C. Edmond (3 $\frac{1}{2}$ h.p. Premier), Armstrong 3-speed gear, belt, single-cylinder.
 J. L. Norton (3 $\frac{1}{2}$ h.p. Norton), Armstrong 3-speed gear, belt, single-cylinder.
 R. Drechsler (3 $\frac{1}{2}$ h.p. N.S.U.), N.S.U. 2-speed gear, belt, single-cylinder.
 P. Butler (4 h.p. Dot), P. and M. 2-speed gear, chain, twin-cylinder.
 J. Lang (4 h.p. Matchless-Jap), Matchless variable gear, belt, twin-cylinder.
 A. H. Alexander (3 $\frac{1}{2}$ h.p. Rex), single gear, belt, single-cylinder.
 F. Mackay (3 $\frac{1}{2}$ h.p. Singer), single gear, belt, single-cylinder.
 B. Plews (3 $\frac{1}{2}$ h.p. Althorpe), two-speed gear, chain and belt, single-cylinder.
 R. Lord (3 $\frac{1}{2}$ h.p. Rex), single gear, belt, single-cylinder.

Riders not mentioned did not complete a single lap.

* Fastest lap in third circuit, time 44 min. 52 sec.; speed 50 $\frac{1}{2}$ miles per hour.

THE WESTERN SECTION OF THE COURSE.

IN order to observe the effect of Creg Willey hill on the competitors during the opening round, I took my station near Cronk-y-voddy cross roads, where a clear view of the course can be obtained for about half a mile. At 10.15 C. R. Collier (Matchless) came up the gradient a great deal slower than would be expected. Exactly one minute afterwards Quentin Smith (Triumph) went by, preceding Rem Fowler (Ariel) and Jones (Premier). Obviously, the gradient appeared to have a marked effect on all the machines, and very few passed at any exceptional speed. The Matchless, Scotts, and Indians appeared to the best advantage. Competitors passed at very short intervals, and this added to the interest from the spectacular point of view: frequently there were three men in sight at the same moment. The peculiar sitting position of the N.S.U. riders was most noticeable, and must have proved anything but comfortable. De Rosier passed hotly pursued by Lang (Matchless), but neither gained any ground

Being desirous of witnessing some fast cornerwork, I journeyed by the old course to the corner before Kirk-michael. Here some of the finest riding could be seen, as a skilful man could negotiate the turn "all out," and in this respect no one equalled Philipp and Applebee on their Scotts. Approaching the corner with their smooth peculiar hum, these machines swung out, tilted inwards, their rider's leg scraping the ground, and went by with a swoop wonderful to behold.

How much can be gained at corners was clearly demonstrated, as the leading men invariably took them with as little fuss as possible, while those less fortunate, or less practised, cut out too long, slowed down, and finally went wide.

The best at this corner, besides the Scott riders, seemed to be Godfrey, Franklin, and de Rosier on Indians, C. R. Collier (Matchless), Gassert (N.S.U.), and Carvill (Triumph). The sporting instincts of the spectators were aroused when

F. Stanhope Spencer (Rudge) leading, and J. T. Basham (Bat) rounding Hillyberry Corner. Note the straight open stretch and the dust.

during the time they were in sight. Rankin on his Singer provided a momentary thrill by showing a horrible wobble, but eventually managed to get straight again just before disappearing from view.

The riding position on the Rex machines appeared to be much lower than that on any of the others, and at a distance they presented the curious aspect of riderless run-aways.

Fenton's Zenith was running badly, for it could be heard coming slowly up the rise, and it passed in a hesitant mood, while its rider vigorously flooded the carburetter. Apparently he overdid it, for he stopped a little way further up, eventually restarting in clouds of black smoke.

Whilst people were waiting for the tail end of this round an impromptu entertainment was provided by the antics of a bull, which was being led by fully eight yards of rope, one end of which was attached to its horns, whilst it was accelerated from behind by two men with sticks. The animal invaded the course with its guardians in tow, and refused to be turned off, until the combined force of marshals, special constable, and crowd ejected it, and saved what might have been a very dangerous situation.

Lang (Matchless) and Haswell (Triumph) rounded together, the former getting the lead a short distance further down the village. Butler appeared to be enjoying some private and personal joke, for his countenance betrayed a wide and appreciative grin as he passed.

From further down the road, actually in Kirkmichael itself, the spectacle was one of pure speed, without any of the excitement occasioned by a corner. Newsome's Triumph roared by very fast; Reed's Dot appeared slower, but not a whit less noisy, and Gibson's Rudge with its particular exhaust note passed well, jumping a little under the influence of a particularly vile piece of road. Mason (Matchless) and Alexander (Indian) came by in grand style, the latter seeming rather the faster. It was at this point that a rumour came through, fortunately untrue, that Alexander (Rex) had smashed into Sulby Bridge, and that he was badly hurt.

Thrills at Ballig Bridge.

One of the most sensational parts of the course is Ballig Bridge, and I arrived there just as Brewster (Norton) came over, jumping the front wheel only. During the

The International Motor Cycle Tourist Trophy Races.—

C. R. Collier (Matchless)—who finished second but was disqualified—travelling down Bray Hill at 70 m.p.h. A large crowd congregated at this point.

second round Alexander (Rex) shed his belt in mid-air at Ballig, and lost valuable seconds thereby. Taylor (Rudge) lost the end of his silencer in the same place during the jump. Quite the most awe-inspiring passage was that of Philipp (Scott), who came up to the bridge all out, left the ground a clear foot, and landed with a tremendous bump some six yards ahead. Most riders shut off and reduced the jump to a minimum, especially the N.S.U. men. Collier and De Rosier, who were loudly cheered,

provided fair jumps, which resulted in blood-curdling wobbles, while much interest and sympathy was aroused for J. R. Alexander, whose knee was seen to be badly cut and his leg dangling in a nasty position.

At all three points the race was full of incident, which in many cases bordered on the sensational. S.H.D.

DOWN THE MOUNTAIN.

HAVING left my machine at Hilberry, Noel Drury and I set off to tramp up the mountain with a view to seeing how the machines fared a mile or two above Keppel Gate; with plenty of time in hand we made ourselves as useful as possible collecting puncturiferous articles off the road—by no means a light task, as the yield generally panned out at about a handful of hairpins, ends of telegraph wire, horseshoe nails and other hardware, per hundred yards. Arrived at a point where the machines could be discerned on the sky-line a good mile away we awaited the coming of the leader with some little excitement. A puff of dust on the hillside and the faint roar of an engine indicated that someone was coming along, and in a few moments C.R. was roaring past us “all out,” and a moment later was sweeping out of sight down towards Keppel. At this point C.R.’s time was 38m.—very good going indeed—but Quentin Smith’s performance—he was next along in 40m.—was perhaps even more admirable, and it was quite clear from the way he took the bends that he had learnt the course to a hand’s breadth. The same time was done by H. A. Collier, who, however, was bettered to the extent of half a minute by Godfrey. The Triumphs appeared to be going exceedingly well, and were picking up place after place in a remarkable manner; for instance, Lister Cooper, starting 61st, was the 31st rider past me, and Haswell, who started 56th, the 41st. De Rosier managed to pick up twenty places, and so did Berlie, who rode the 4 h.p. M.R. in the most amazingly clever manner. The finest performer here, however, was Frank Philipp, whose Scott just slid down the gradient at about 70 m.p.h. as easily and silently as if the rough road had been a smooth wooden track. Applebee and Myers also came along at a silky mile a minute, but Philipp, smartly attired in purple leathers, was undeniably the “star.”

The corner below this point is decidedly deceptive. It is really one that, although on the down gradient, can be taken “full bore,” in approaching it, it is almost impossible to persuade oneself that one is not going clean over the bank and down the side of the mountain. Ifere it was that the value of diligent practice made itself felt. Berlie went

O. C. Godfrey crossing the finishing line on his 3½ h.p. two-speed Indian. His average speed was approximately 47½ m.p.h.

The International Motor Cycle Tourist Trophy Races.—

ALL SMILES. O. C. Godfrey, the winner, with Mr. & Mrs. W. H. Wells.

round very warily with much cutting out (only for the first circuit, however), and J. T. Bashall lost seconds by dropping down to quite a trot for it, but De Rosier, although having a sort of wavy roll on, occasioned by the trickily puffy wind, roared away around it in regular flying kilometre style. Adamson, North, Elce, Norton, and J. R. Alexander came along in a bunch, and these men deserve the greatest credit for the clever way in which they sorted themselves out in a long string before taking the bend. Haswell and A. H. Alexander also had a fine long neck and neck struggle, which lasted, I was afterwards told, almost to Hilberry. There was, thanks to the rough surface, a good deal of rolling and dodging, about the most notable performance in this respect being by Holder.

At Keppel Gate.

This is one of the most exciting points on the course. The road, after sweeping round a wide curve, drops sharply down to Crag-na-baa Hotel, the turn at Keppel being made all the worse by the fact that it is partially obstructed by the rails which support the gateposts, and these, by the same token, considerably obstruct the view. This is the sort of thing which puts A. J. Moorhouse on his mettle, and he just galloped down the hill and whipped through the gate, bouncing and bumping over the road inequalities with a look on his face as though he were at last in his happiest element. The Scotts, as usual, made no more fuss than if they were flying above the road instead of rolling along it. Godfrey put in some tremendous speed. Adamson, misjudging the curve at Keppel Gate, swerved across the road into the turf-covered wall, and everybody expected to see a few dusty somersaults. However, he made a most magnificent recovery when it seemed quite impossible for anything but a smash to happen, and a moment later was going as merrily as ever and just as fast. Hugh Mason got a bad wobble on just above the turn at Crag-na-baa Hotel by putting on his foot brake too suddenly, but a little dexterity soon enabled him to right himself again.

Judging by the crowd that was assembled here, the locals evidently regarded this as a great point of vantage, and indeed there was a good deal of sensational riding to be

seen. The German N.S.U. team put in some fine corner work, adopting the lean-in-machine lean-out-rider principle. Stanley and C. R. Collier arrived neck and neck, came round the corner in single file, and then proceeded to go in for a hot scrapping match down the hill, in which the honours, for the time being, went to the single-cylinder. Sproston, coming wide, had a near shave for the wall, and the great Jake and F. A. Applebee put up a fine match, which showed that as far as speed was concerned they were as nearly as possible equal. Applebee was, however, easily the quicker round the turn.

A little lower down I came upon Lord looking down his nose at a tyre that was cut, evidently by a sharp stone, clean round from bead to bead, and quite beyond any temporary patching up. Mason's Matchless appeared to cease firing for a short time, probably owing to a stopped-up jet, for the rider's vigorous float-tickling got it to fire again, and there appeared to be no recurrence of the trouble. Johnson's Matchless presented a peculiar appearance, as the back mudguard was broken, and dancing about upon its supports gave the appearance that the whole machine was taking spasmodic jumps.

At Hilberry.

An exciting bit of speed work was seen here when Jones, Franklin, and de Rosier came down the long straight all together and at a huge speed. The first-named held on with full throttle right through, and, whipping past the others just before the corner was reached, negotiated the turn in fine style and with a wonderful spurt. W. H. Bashall was also prominent here, and flung himself round with a look about his chin that said, "Finish, at all costs." As for Berlie on the M.R., he proved quite the most wonderful corner-man in the race, and was perceptibly faster at this point than any of the others. Leaning over at an extraordinary angle, he went round as though no corners had any terrors at all and cheerily waved his hand to me. His ovation was tremendous, and everyone at Hilberry would have liked him to finish high up. His machine, by the way, weighs only 120 lbs. Lister Cooper stopped on his fourth lap with a broken exhaust valve and made a smart replacement, only occupying six minutes in the process. It was no surprise to him to experience further trouble, for ill-luck dogged him throughout. C. R. Collier, suffering from an almost flat punctured tyre, took the corner in his last round in a decidedly alarming manner and rolled considerably. Brewster arrived with his gear seized up, but eventually got away with the belt rim spokes strapped to the wheel spokes.

W.G.A.

Measuring the engine dimensions in a private garden immediately after the finish of the race.

The International Motor Cycle Tourist Trophy Races.—

How the Winner Fared.

Godfrey's success was an extremely popular one, and his face beamed with joy on being informed of his success. W. H. Wells seized him by the arm and paraded past the crowd at the enclosure, amid cheers from the spectators. The race was well won, but it had been a terrible strain on the riders.

Godfrey won a most uneventful T.T., having practically no enforced stops at all. He filled up with petrol at the end of the second lap, but had no other occasion to visit the depots. The Indian mechanical oiler worked perfectly, and it was only on the last lap that the hand pump was used as a measure of precaution, as, at the Ramsey hairpin, C. E. Murphy had signalled to Godfrey the position he lay in by holding up a single portentous finger. Godfrey was not aware or had any idea of the positions he held during the race up to that point, and henceforward the speed was piled on, the machine not having previously been opened to the last notch. The low gear was used practically only for the hairpin bend on Snaefell and for picking up after the "gooseneck."

There were only two incidents of any note. A sparrow flew into the driving chain near Sulby, and got badly mangled, causing the breakage of eight chain rollers, and afterwards Godfrey had a narrow squeak passing another competitor near Crag-na-Baa. The man in front was on his wrong side, and Godfrey had to go wide over some very rough ground. His only bit of scrapping was with H. A. Collier, whom he managed to pass between Quarter Bridge and Crosby.

An hour after the finish, when other competitors were still encircling the course, Godfrey was in bed in peaceful slumber.

The party of Dutch motor cyclists who visited the island especially for the T.T. Races attracted much attention. They all carried tiny flags on the handle-bars.

A half-crown sweepstake was organised in connection with the T.T. by the A.C.U. officials at the Sefton Hotel, the pool being £50. V. A. Holroyd drew the winner and received £25; Owen Clegg second, £15; and C. H. Bramley third, £10. Ten per cent. of the total was deducted as a contribution to the Douglas Hospital.

A GROUP OF WINNERS.

1. O. C. Godfrey (3½ Indian), winner of the Tourist Trophy. Godfrey's time was 3h. 56m. 10s., which equals a speed of 47½ m.p.h.

4. C. B. Franklin (3½ Indian), who upheld the honour of Ireland and was second, only 3m. 49s. slower than the winner.

2. Quentin Smith (3½ Triumph), second of the single-cylinder riders to finish.

3. A. J. Moorhouse (3½ Indian), a popular Macennia, third in the race.

5. J. A. Carvill (3½ Triumph), first single-cylinder. Carvill's time was 4h. 16m. 49s., equal to a speed of 43½ m.p.h.

The Kilometre Speed Trials on Tuesday.

The flying kilometre trials were run off on Douglas Promenade in a depressing drizzle, and in the presence of fully 40,000 spectators. The wet made the concrete track extremely tricky, and the officials wisely cancelled the second half of the programme in which the competitors were to take a return run in the opposite direction. Notably Harry Martin lost a good deal of time through the rather haphazard manner in which the signal that the competitors had passed the finishing line was given. De Rosier made a good burst of speed, but was never all out, and he started cutting out a hundred yards before the line. In stopping he had to correct a decided wobble.

The times were as follow:

CLASS B.

	Time.	m.p.h.
D. C. Bolton (2 Martin-Jap) ...	39s.	57.35
H. V. Colver (2½ Enfield) ...	43½s.	51.54
P. Weatherill (2½ Zenith-Gradua) ...	44½s.	50.6

CLASS C.

J. T. Bashall (4 Bat-Jap) ...	35½s.	63.34
W. H. Bashall (4 Bat-Jap) ...	35½s.	62.48
S. A. Newman (3½ Ivy-Precision) ...	36½s.	61.45

CLASS D.

J. De Rosier (7 Indian) ...	29½s.	75.57
H. D. Shaw (7 Indian) ...	31½s.	70.34
J. J. Cookson (7 Matchless-Jap) ...	36s.	62.13

OUR ARTIST'S IMPRESSIONS OF THE TOURIST TROPHY RACE.

CLUB NEWS.

Oxford M.C.C.

The hill-climbing competition advertised to take place at Kop Hill on Saturday has been postponed.

Glasgow M.C.C.

The results have now been declared for the twelve hours' trial, which was held on June 24th. The following qualified for gold medals:

	Marks lost.
H. W. Ballardie (3½ Triumph) ...	0
R. M. McCulloch (3½ Triumph) ...	3
W. Deans (3½ Rudge) ...	1
G. W. Orr (3½ Ariel) ...	3
F. Blair (6 Zenith) ...	0

York County M.C.C.

The second Quarterly Trials were held on Saturday last over a 94 mile course to Austwick and back. The following made non-stop runs, qualifying for silver medals: W. E. Asquith (1910 Triumph), R. W. Glenn (1911 Triumph), J. C. Mitchell and Miss J. Mitchell (1911 3½ h.p. Premier and sidecar).

Derby and District M.C.C.

In the flexibility hill-climb held on Hazlewood Hill on Saturday last, and decided upon greatest difference in fast and slow times, the winner proved to be A. Ainsworth (3½ Rudge), E. G. Boissier (3½ h.p. H. and M.) being second, and C. Foley (3½ h.p. Bat) third.

Club News.—

Liverpool A.C.C.

On the 9th inst., there will be a speed-judging contest for ladies in sidecars, meet at the Stage, at 11 a.m., while the following week, on the 16th, a run to Kendal has been arranged, meet Sefton Arms, at 10 o'clock.

North Middlesex M.C.C.

The open hill-climb on July 15th includes a division for amateurs only, and also another for ladies, so that a bumper entrance should be assured. Entries close July 9th, and further particulars can be obtained from A. V. Deacock, "Sonning," Highgate Avenue, N.

Cork and District M.C.C.

A gymkhana was held at Garryvoe Strand on June 22nd, but owing to the wild and wet weather only two events could be run off. Results:

Tilting at the Ring.—1. P. A. Egan (3½ h.p. Triumph); 2. M. J. Chambers (3½ h.p. Rudge).

Flying Half-mile.—1. R. S. Russell (3½ h.p. T.T. Matchless), 35½s.; 2. L. Dobbin (3½ h.p. T.T. Rudge), 36s.; 3. R. Atkinson (3½ h.p. Rudge), 36½s.

Nottingham and District M.C.C.

His Grace the Duke of Portland has again kindly lent the track at Clipstone for the next meeting on August 19th. There will be seven open events for various classes of machines, and entries close on August 10th. Particulars from J. King, 8, Shakespere Street, Nottingham.

Willesden Green C. and M.C.C.

There will be a reliability trial and speed-judging contest on July 16th, the course decided upon being from headquarters to Coventry and back. All entries must be sent to J. C. Ball, 166, Chapter Road, Willesden Green, before July 10th. The first and second prizes are a pair of Kempshall tyres and a Whittle belt respectively, presented by the manufacturers.

Pontefract M.C.C.

The hill-climb for the Robson trophy took place at Minscliffe last Thursday, the winner being Col. J. R. Shaw, J.P., the club's president, on a 4 h.p. Scott. W. Bentley and H. Marshall, riding 3½ h.p. Triumphs, tied for the second place. Fastest time, T. Dunk (T.T. Triumph). A knock-out competition was won by A. H. Burnell (T.T. Triumph).

A group of competitors in the Sydney M.C.C.'s hill-climb at Eastwood, N.S.W.

THE COAST RIDE.

IN our last issue we briefly referred to the completion of F. Dover's ride round the coasts of England, Scotland, and Wales. Exigencies of space prevented the publication of many interesting details last week, and doubtless many of our readers will be interested to read a few additional particulars which it was impossible to include in the daily reports sent to us by post, these naturally being of the shortest possible description, owing to the fact that they had to be hurriedly written at the completion of the day's journey and posted the same night.

State of Machine and Accessories.

When our representative strolled round to Lawrence's Hotel, Liverpool, on June 26th, at noon, and in a deluge of rain, Dover and Sawyer (his riding companion for the last four days) rode into the Square looking fit and well. The 3½ h.p. Premier, beyond being very dirty (it had not been cleaned during the whole of the ride), was in excellent order. The footrests were bent, the speedometer out of action, and the horn dented, but nothing else was amiss.

With regard to the tyres, the front one still had the Clincher Dreadnought pattern on the tread, and had been punctured once. The back cover had been replaced at Bridlington. There were eight patches on the back air tube, but both tubes were still in order. Two Lyso belts were carried, the new one being used during the wet weather as a precaution against belt slip. The old one still looked good for a lot of wear.

With regard to the seals, those on the engine and on the frame were intact, but that on the front wheel forks had broken off through vibration. Those on the back wheel forks had to be removed to replace the tyre. With regard to the engine, Mr. Dover informs us that the sparking plug was never taken out or the exhaust valve removed, and it was pulling as well during the last twenty miles as at the commencement. No attention was paid to the carburetter, and no tools were used on this portion of the mechanism, neither did the Bosch magneto receive any attention whatever, except for lubrication at different periods.

Dover's tales of the North-west of Scotland will not encourage the motor cycle pastime there, for he says he

averaged one hundred dismounts per day, most of them to enquire the way. The usual answer to this query was "Nae sae far," an estimate that often proved to be thirty miles. Time moves so slowly in these districts that the inhabitants have no idea of expedition as we know it. On one occasion a funeral party was disturbed, who were carrying all their food and utensils for a long journey, and they could not have travelled less than fifteen miles on foot from the nearest place from which they could have come. In many places the crofters ran away when they heard the machine's approach, and in some of the villages the inhabitants were so frightened by the engine explosions that they would not go within ten yards of the machine.

In some of the wild parts of Scotland the sheep ran in front of the machine for miles till they could run no longer, when they lay down exhausted, and the rider was able to pass. The horses in some instances ran till they were tired out, and then, pressing their heads into a bush or hedge, trembled until the machine had passed.

At one place in Scotland, after suffering eighteen spills in one day owing to the loose state of the road surface, Dover decided to cut that bit out and take the steamer to Thurso. Upon making enquiries, he was told that the steamers ran often, but this proved to be once a month, and as the steamer had left three days before his arrival he was compelled to finish the journey by road.

Ready to Go Again.

Dover told us that, with the exception of the North-west of Scotland, he was ready to go over the whole journey again. He summarises the whole trip by saying that he would not undertake it again without a companion. The long journey is too lonely, and the long distances mean all riding and sleeping, with no time to look round and admire the various points of interest en route. For a long tour of this description, Dover thinks that one hundred miles per day is quite sufficient, provided one takes an intelligent interest in all the architectural and scenic beauties of the route.

THE TITAN SOCIABLE CARETTE.

THE little three-wheeler of which we give two illustrations was lately brought before our notice by the makers—the Titan Motor Wheel Co., Far Gosford Street, Coventry.

Outwardly this vehicle is built very much on car lines, being fitted with a hood and artillery wheels. Every care has been taken by its makers to provide for the comfort of the passenger and driver, and the Titan is said to be capable of a speed varying from four miles to forty miles per hour.

effected by threequarter pitch roller chains. The change of speed is controlled by two pedals, and whichever gear is required the pedal for same must be depressed and held down by the foot. When both pedals are released free engine results. Only very slight pressure is required to keep the pedals down, and as they are placed in a comfortable position they serve as footrests. The frame is made of armoured wood laterally supported by steel cross members. Laminated elliptic front springs and grasshopper

A rear view of the Titan carette.

The three-wheeler, of which we give a description, ready for the road.

The motive power is a single-cylinder $5\frac{1}{4}$ h.p. water-cooled engine with B. and B. carburetter; the ignition is by high tension Ruthardt magneto. The epicyclic two-speed gear box is bolted to the crank case and driven by gear wheels from the engine crankshaft, and the speeds provided are in the ratio of 6 and 9 to 1 and transmission to the rear wheel is

inverted rear springs ensure easy riding. The steering is by rack and pinion, and the wheelbase is six feet, the track being four feet. Two internal expanding brakes are fitted to the rear wheel only, one operated by foot and the other by hand. The engine is controlled by the throttle only, the lever for which is on the steering column.

REMOVING CARBON WITHOUT DISMOUNTING CYLINDER.

A FEW weeks ago we had an opportunity of witnessing a demonstration of the Watkins patent internal carbon deposit remover, the results obtained being excellent in every way. The apparatus consists of a cylinder of oxygen, connected to which, by means of a flexible connection, is a length of copper tubing. The valve caps being removed and piston placed at top of compression stroke (both valves closed and cylinder walls swept by piston now being covered), the oxygen is forced into the cylinder and a light applied. The terrific heat obtained completely burns away all carbon deposit in a very short time. Messrs. T. J. Sully and Co., of Old Town, Clapham, are, we understand, the only people possessing the necessary appliances, and are willing to clean a single-cylinder motor cycle engine thoroughly by the above method in under fifteen minutes at quite a nominal charge. What a boon this invention will be to the motor cyclist who will be able to obtain a clean engine in so short a time with practically no trouble and at a low figure.

A part of the erecting shop at the Scott Engineering Company's works. The three machines in course of erection are the T.T. models ridden by E. Myers, F. A. Applebee, and F. Philipp in the Senior Race on Monday.

A NEW INFINITELY VARIABLE GEAR.

By the courtesy of Messrs. Rudge-Whitworth, Ltd., we had an opportunity last week of examining a new infinitely variable gear which is extremely simple and not particularly costly to manufacture, and which, on account of its efficiency, promises to be very successful.

Briefly, the gear consists of an expanding pulley on the engine-shaft with a correspondingly expanding belt rim on the rear wheel. The operating mechanism for contracting and expanding the two pulleys is interconnected, so that when the engine pulley is expanded the belt rim contracts, thus taking up the slack of the belt, an arrangement of the leverage compensating for any variation in the opening of the flange. It will readily be seen that, owing to the difference in the diameter of the two pulleys, it is necessary to provide a compensating arrangement of this nature, otherwise the tension on the belt would be variable, whereas with the device under review the belt tension remains constant. The gear ratios vary from $3\frac{1}{3}$ to $5\frac{3}{4}$ to 1.

The engine pulley has a fixed and a loose flange, the latter being the one nearest to the crank case. Surrounding the pulley is an aluminium case, similar to the clutch cover already fitted to the Rudge-Whitworth machines. This has cams formed on its face: a disc with corresponding cams lies against the edge of the case, and the disc is suitably connected to the loose flange. Ball races are provided to take up the thrust, and a coil spring keeps the washers in position

Sectional view of the engine pulley. The black portions represent the movable flange and the cam disc.

and also prevents any possibility of the balls dropping out. To operate the cam disc a long flat lever is suitably fastened to it, working in a quadrant on the tank. A rod is attached to the disc and extends to the rear hub operating mechanism, so that when the cam disc is partly rotated the motion is communicated to the hub mechanism, and the two work in unison. The rear wheel is built up with a special hub over which slides a sleeve. The fixed portion of the belt rim is attached to the wheel spokes, but the loose flange is spoked to the sleeve. Five studs in the sleeve pass through slots in the wheel hub and into a bush, so that the drive on the loose flange is partly taken by the spokes of the wheel hub and partly by the studs. The bush is connected to a rod passing up the centre of the hollow axle. When the rod is operated by a lever pivoted on to the chain stay, the loose flange of

the belt rim moves outwards, and allows the belt to drop further down the groove. The lever, as already mentioned, is connected to a rod passing to the cam

Part sectional end view of rear hub and belt rim. The sliding flange is shown black.

disc of the engine pulley, so that one movement of the hand lever expands one pulley and contracts the other and *vice versa*. A coil spring is provided in the hub, which keeps the loose flange at the lowest gear position.

At the time of writing several of these gears were being made for use by the private owners of Rudge-Whitworth machines who had entered for the T.T. Senior Race. We think it worthy of mention that it was only on the morning of June 23rd that the drawing office work on this gear was commenced; the drawings were handed to the works on Monday, June 26th, and the first machine fitted with the gear was on the road on June 28th. By working night and day the firm was able to send complete gears to the Isle of Man by the following Thursday, June 29th, a record in rapid construction which we think would be difficult to emulate and hard to beat.

One of the T.T. Rudge-Whitworths fitted with the new infinitely variable gear described in the accompanying article.

Occasional Comments "by Ixion"

SEJ

The B. and B. Variable Jet.

I am now busy testing the B. and B. variable jet carburetter, and am absolutely charmed with it. A case of spare jets is well enough, but it is an awkward job to change loose jets. To make their sockets petrol tight is not always easy, and if a speck of dirt be left on the fibre washer there will be a leak, while these fibre washers are delicate and brittle, often breaking in process of detachment.

With the variable jet you can make a toolless adjustment from the saddle, and get precisely the aperture you want. With the aid of a few file marks on the butt of the spray chamber you can further return at any instant to any adjustment that you have found useful for a particular purpose in the past.

Before long three or four differentiated settings will be punched on the outside of my carburetter, and whether I am competing in a petrol consumption trial or a speed test my carburetter adjustment will only demand a second or so in the making.

Cutting out the Float.

The meaning of the above headline may not be obvious at first sight. It refers to a practice I adopted in racing work on twin-cylinder machines some years ago. When the engine was running at a very high speed I discovered that a few extra miles an hour could be obtained by pressing down the float tickler, and so letting the petrol run straight through from tank to jet without any intermediate cut-off at all. In more than one event I beat the trade rider of my machine simply and solely by means of this device. I never quite worked out the theory of the notion to my satisfaction. One would have thought that if the float chamber were never allowed to fill up with spirit, owing to the savage suction on the jet, no extra supply could have been gained by mechanically holding the float out of commission, but, anyhow, the fact of extra speed was indubitable. Of late years I have ridden single-cylinders almost exclusively, and for several seasons past I have tried the same plan on them without the least success. Not long ago I particularly wanted to outstrip a rival machine in an all-out sprint, and the makers told me to hold my float down when I had worked up speed. I complained that both hands were required to keep this particular machine on the road, for speeds have gone up since the time when I first adopted the notion. The makers replied that it was only necessary to hold the float down for a second or two. The r.p.m. would immediately rise, *and would remain at the higher figure*, which is distinctly curious. I tested their information, and for the first time in my experience I found the plan paid with a single-cylinder. I have performed one or two experiments, *e.g.*, riding without a float at all, and keeping the petrol tap closed until the speed has risen. Finally I got a Bowden carburetter tickler and fitted it permanently to my machine. The engine will do somewhat over a mile a minute for short distances. When it is

travelling at this speed I cut out the float for a few seconds, and the speed immediately rises two or three miles an hour, and does not drop again when the float is released. Readers might send their views or similar experiences to the Editor.

Hill-climbing and the Scottish Trials.

By all accounts the Scottish Trials will not be a mere picnic on the level, even though the trade desire for decent surfaces has influenced the promoters to cut out Amulree and Cockbridge Hills. I hear that Cairn o' Mount is no ordinary pimple. It is over two miles in length with a decent gradient all the way, and in the upper portion there is a S bend resembling the Devil's Elbow on Cairnwell, but consisting of an infinitely stiffer gradient. We have to go north of the Tweed nowadays to find hills which really test motor cycles without throwing the burden of trick riding on the jockeys. Excessive length, combined with a rational degree of twistiness and a sustained gradient, are the excellent features of the Scottish climbs.

Explosive Puncture Sealers.

I am all of a tremble. On June 15th I gave a recipe for a home-made puncture sealer, alleged to be popular in America. This week a writer, signing himself "Chemist," remarks that this recipe produces a most powerful explosive; should a tyre so filled hit a large stone at high speed the result of the impact would be

"Sailing, sailing up into the blue,

Front wheel and back wheel and motor cycler too!"

I have not had time to verify this remark as yet, but let me hastily ejaculate that I can only be seen at the office by special appointment.

The trio of Frenchmen in the Junior T.T. Race who were entered on Alcyons: Francois Sain, Michel Canale and J. Garbero. The Alcyon machines are gear and chain driven.

Service Tweed Caps.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters should be addressed to the Editor. "The Motor Cycle," 20, Tudor Street, E.C., and should be accompanied by the writer's full name and address.

"Records."

[5707.]—The present glut of records is very depressing reading, particularly law-breaking six days' rides, and I beg to enter a protest against such records, and hope motor cyclists will join in a movement against them.

This sort of thing is bringing the sport into great odium, is highly dangerous to the public, and is certain to lead to more systematic and constant police traps all over the country.
G.C.

The Vicious Dog.

[5708.]—Quite lately, while the dog trouble was at its worst, I made application for membership in the A.A. and M.U., asking them at the time of writing whether they could lend a helping hand in this matter. A most kindly reply came from Mr. Stenson Cooke, stating that they would be perfectly ready to act if I sent in the name of the owner of any dogs who should on more than one occasion in the future cause me trouble.

While heartily endorsing the remarks of "GP 5684" regarding the necessity of legislation, it would be far better to obtain the assistance of the existing societies rather than inaugurate any new institution for the purpose.

W. A. DOUGLAS-HAMILTON.

The Coast Ride.

[5709.]—In looking over Fred Dover's log, I see he has an entry for June 12th, "John-o'-Groat's to Fraserburgh, no hills," which is a little strange if he took the proper coast road to Fraserburgh. We have not more than nine miles away the famous Pennan Hills, or Braes as we Buchan people call them, and, owing to their very steep nature, the cart wheels have to be spragged on descending, and the road surface is very bad on tyres.

We have a good few motor cyclists in the Broch, who own first-class 1911 machines, and when they require them tested to the fullest they can get that done on Towie and a great many others quite as stiff as Rest and be Thankful or the Devil's Elbow, on the coast road between John-o'-Groat's and Fraserburgh.
BROCHIER.

Saddle Comfort.

[5710.]—I feel it my duty, in the interests of motor cyclists, to write and ask you to put before your readers the following experience.

I ride on an average some four to five hundred miles a week, and until about nine months ago never felt that the various saddles I tried were quite what they ought to be from a point of comfort. I then tried one of the XL'All anatomically moulded and cantilever sprung saddles. The difference this saddle made to one's comfort is difficult to imagine. I can now ride 150 to 200 miles at a stretch without feeling any discomfort.

At Whitsuntide I was persuaded to try one of the same company's pan saddles. I rode this saddle in the Birmingham to Land's End and back competition, doing 288 miles at a stretch without any discomfort whatever; in fact, the saddle gives one the sensation of sitting in a comfortably padded armchair minus the arms only.

I have absolutely no interest whatever in the makers, and it is simply because I wish the virtues of this type of saddle to become known to fellow motor cyclists that I ask you to publish this letter.

R. VERNON C. BROOK,
Hon. Secretary Birmingham M.C.C.

Tyres Blowing off Rims.

[5711.]—We notice from time to time mention of tyres blowing off rims, and lately have seen cases where riders have had their holiday spoilt through this fault. It may interest some of your readers to know that three or four layers of tape put round the inside of the rim is an almost certain cure. We have had so many cases of this trouble brought to us that we are surprised this tip is not better known.

CROYDON CENTRAL MOTOR CO.

A Combined Handle-bar and Lamp Bracket.

[5712.]—We notice in the issue of June 22nd that a Mr. Milne has patented a carrier for lamps and generators. We have already made, advertised, and sold such a carrier in an improved form to the one your correspondent refers to.

Your correspondent has one fatal error in his drawing, and that is the generator socket has a slot in it which will become squeezed with the tightening up of the whole carrier. It will then be necessary to loosen the carrier to detach the generator. There are only two machines on the market as far as we know at present that could use your correspondent's style of carrier at all.

HALL AND SONS, LTD.

Still Another Conversion.

[5713.]—I enclose a photograph of a 6 h.p. Singer tricar which I have converted into a sociable. I thought it would be of interest to you and your readers. Practically

The cost of converting this tricar to a sociable was about £7. (See accompanying letter.)

I have rebuilt it myself, and reduced the weight by about 1 cwt. It is most comfortable, and far exceeds my expectations in running. No doubt other readers will repay themselves in a similar way, the cost not being heavy—between £7 and £8.
JONAH BADGER.

Great Reforms in the Scottish Six Days' Trial.

[5714.]—Mr. Pratt's letter [No 5678] on the above calls for some little comment.

Although the route this year will possess a better set of road surfaces, this does not mean that it will be no test, as Mr. Pratt seems inclined to think, and it is not easy to understand his attitude in hoping for increased severity.

In the matter of hill-climbing, Mr. Pratt must not forget how all the change speed mounts were completed "outed" at Arrochar.

I think, in all fairness to the other competitors who did so well on hills, that this should be pointed out.

J. DONALDSON.

An Experience of a Two-jet Carburetter.

[5715.]—Noticing several enquiries recently regarding the Binks two-jet carburetter for motor cycles, I thought a little account of my experience would not be amiss.

I have one fitted to my $3\frac{1}{2}$ h.p. two-speed Humber, and find it a very great advantage both for flexibility and power. There is only one lever to manipulate, whilst for slow running only one jet is in operation, for fast work the two jets are brought into play, the result being that a much finer mixture is produced in this way.

The difference is particularly noticeable on my Humber—whereas the explosions used to be woolly, they are now more crackly. This enables me to mount hills which were hitherto impossible on the top gear.

There is also a noticeable saving of petrol, as for slow and ordinary running only the small jet is in operation. The carburetter is very flexible, and engine picks up much more rapidly without knocking than any other that I know of, also it is wonderfully easy to start.

A. C. ROBBINS.

Change Speed Gears and Sidecars.

[5716.]—In reply to your correspondent under the above heading, I have ridden and driven motors of various makes since 1902, and purchased my first Scott in the early spring of last year, and purchased a 1911 model this year. I used my last year's model almost exclusively for sidecar work. The machine was always ready for its work, and took me over a very considerable portion of the English counties.

My sidecar was the Millford spring wheel, and when on tour with my wife we carried over 60 lbs. of spares and luggage.

I never knew I had a two-speed gear except for occasionally giving it a kick when requiring to change speed or starting. Starting was in itself a pleasure instead of a task, as with a simple kick of the starting lever after having flooded the carburetter, I was able to sail away much to the astonishment of the usual crowd.

As for your correspondent's statement that we only use our sidecars for two or three days a week or for a sixty miles spin, I went a tour on mine last year, starting eight miles south of Hitchin, running right up to the Lakes with

one stop for the night at Boston Spa, and on next day with one stop for lunch at Kirkby Lonsdale to Portinscale.

Whilst in the Lake District I climbed every hill which came in our rounds, including Red Bank, which is about 1 in $3\frac{1}{2}$ (but on this particular hill I had no luggage and had to drop my passenger), and after a fortnight's running round I motored back here with one mechanical trouble near Ilkley. That in itself is not a bad record for a machine I was warned was not prepared for the heavy work it had to tackle.

NORMAN HODGSON.

[5717.]—In your issue of June 15th I notice a letter on the above subject. I consider I am qualified to answer several points raised therein, for the following reasons. I reside in a remote corner of the British Isles, where the best roads average 6 to 10 feet wide, full of deep ruts, boulders and holes, sharp angles, and gradients from 1 in 4. Against the unanimous advice of all who ought to know, I purchased a sidecar. My mount is a $3\frac{1}{2}$ h.p. two-speed P. and M. I have driven the sidecar about 2,500 miles in this country, and I think for severity of gradient, etc., this district (Shetland) would be hard to beat in the United Kingdom.

The result of my experiences is as follows. I had much difficulty in getting into the steering, but it is now perfectly simple. I find the combination comfortable to both passenger and driver. The frame stands the strain, and wear on tyres is not at all excessive. When engine, etc., is tuned up and gears gripping well and road conditions good, I can take a ten or twelve-stone passenger up a long 1 in 6 or 1 in 7 gradient. With delicate handling I can work up a short 1 in 4 gradient.

But (and this is the crux of the whole business) to get any satisfaction out of such a combination, the machine must be kept up to concert pitch. I clean my cylinder out every five or six hundred miles—a three or four-hours' job. Grease is apt to work on to the rings and cause slipping of the gear. This must be carefully attended to. I never drive all out, the average with sidecar being fifteen or sixteen miles an hour. I cut down all weight to the last ounce, and do not like a heavier load than ten stones, preferably less. This simply means I have to tune up my machine as if for a race every five or six weeks, and is certainly a drawback, but what would you have? You cannot have it all one way. I cannot afford a car, and I want to take my wife and children out for an occasional spin. To do so I must give my machine constant and assiduous attention, which I do ungrudgingly.

I have had none of the trouble experienced by your correspondent, and can only suspect that he has been expecting too much and has not been giving his machine proper care and attention.

CHAIN DRIVE.

[5718.]—Sitting disconsolate in an hotel in a small town in Somerset I turned for solace to *The Motor Cycle*, dated June 15th, which had just been forwarded to me on my tour. In it I read letter No. 5676 from "Never Again" on the unreliability of change-speed gears. The latter might have been written by myself, so completely am I in sympathy with the writer.

After ten years of India, I had looked forward to this holiday with eager anticipation. The idea was to get a motor cycle and sidecar and take my wife for a prolonged tour, lasting three months, through Britain. I had had three years' riding experience with $3\frac{1}{2}$ h.p. machines and sidecars, but my district in the Punjab was as flat as a pancake, and the roads excellent.

The advice of several well recognised experts in England was to get a high-powered machine fitted with a change-speed gear for this country with its hills and dales. Behold me then with an 8 h.p. machine of well-established reputation fitted with a two-speed gear, which, though usually fitted by the firm, is not of their own make. The fixed sidecar was also made and supplied for the machine by the firm, the combination costing over £100.

We started, and for 300 miles all went well. From that time to this we have done in all 2,500 miles, but never more than 200 without more or less serious trouble, in nearly every case due to the two-speed gear.

A fortnight ago our troubles came to a climax. The gear seized up ten miles from anywhere, and the combination had to be conveyed in a cart to the nearest garage. On being taken down the balls in the gear bearings were found to be double cone shaped and the spindle hopelessly fired. The gear was returned to the firm, who sent me a new

A prettily-decorated motor cycle which was seen at the Eastbourne Coronation festivities. The machine—a $3\frac{1}{2}$ h.p. Triumph—is the property of Lionel O. Hudson of that town.

RELIABILITY

2,025 MILES IN SIX DAYS

ON THE

DOUGLAS

Vibrationless Lightweight

H. V. Swift, who, riding a 2½ h.p. Douglas covered 2,025 miles in six days.

Six Days' Ride on a Lightweight.

H. V. Swift, of the Sheffield and Hamshire M.C.C., completed his six days' ride on a 2½ h.p. Douglas at 9.30 p.m. on June 21st, having covered 2,025 miles. The daily distances, routes, etc., were given last week, see page 626. In a telegram handed in at Sheffield within a few minutes of the completion of the ride, he says: "Finished 9.30 p.m. 2,025 miles in six days. Little Douglas stood the great test remarkably well." Mr. Swift was checked by members of his club and timed by a member of the staff of the *Sheffield Daily Telegraph*.

Lightweight Long Distance

For further proof is necessary as to the efficiency, comfort, and reliability of the Douglas we refer readers to the remarkable results achieved in the **M.C.C. LONDON-EDINBURGH RUN** in which **SIX DOUGLAS'S** entered and gained **SIX GOLD MEDALS**; four returning obtained **FOUR SPECIAL GOLD MEDALS** while Mr. Eli Clark secured **SECOND PLACE** for the **CHALLENGE CUP** with a total variance of only **7 mins. 5 secs.** being only a difference of variance of 2 mins. 39 secs. from the winner; a 3½ h.p. machine. Then there is the **END-TO-END LIGHTWEIGHT RECORD STILL UNEQUALLED**—you are missing the joys of motor cycling until you ride a Douglas. Let us prove it to you to-day.—Write

Reg. No. 547527.

spindle, but disclaimed all responsibility, saying that lubrication was at fault. I knew this was not the case, as the gear had been freely lubricated before every run. However, I accepted what they said, and off we started again. The gear bearings on this occasion were packed with grease, but, nevertheless, twenty-five miles had not been covered before the gear had seized again, leaving us unfortunates with five miles to the nearest town, and here we are again for an indefinite period with the gear once more returned.

Oh for a reliable variable gear! I feel hopeful, however, that your advocacy and this year's T.T. race will bring it. It will find an eager purchaser in
PUNJAB.

[5719].—In reference to "Never Again's" letter, when I first thought of investing in a sidecar machine I had visions of similar troubles with a heavy twin, and so finally decided on a 3½ h.p. two-speed Humber, to which I fitted a light Rey sidecar, and I have no reason to regret my choice. In four months I have covered close on 3,000 miles, and as most all of my journeys have been between 150 and 300 miles, I think "Never Again" will agree that this is genuine touring.

I think that a motor cycle that will pull a sidecar from Manchester to Aberdeen through rain and snow in March in twenty-two hours is all that can be desired; the distance between these two cities is 333 miles.

As for the two-speed gear, I have found this well up to its work, and it requires very little attention.

Like "Never Again," tyres and belts are my only trouble; they wear out far too quickly.

The other points raised in his letter I think are rather exaggerated, or else he has been very unlucky.

For myself I believe the 7 h.p. and 8 h.p. engines will in the future only find favour on quad cars.

B. LEE SUTCLIFFE.

Insurance.

[5720].—With regard to Mr. Priestley's letter [5703] respecting my previous letter [5666], there is no "peculiar clause" in my policy beyond the statement, "number of persons carried, one," and as this is evidently intended to be a condition of the policy, the fact of carrying two persons upsets this condition.

The policy referred to is an A.C.U. policy, and I accepted the decision of the insurance company that they must repudiate liability for the reason stated above. I judged it advisable to make the fact known in view of the increase of "carrier seats" one sees on the road.

ADSUM.

Long Distance Runs.

[5721].—It would appear that we are to witness a surfeit of long distance runs, and I write to ask you if you do not think that such runs are absolutely unconvincing and totally misleading to the public?

Such runs should be officially observed, and so we should know exactly what has been done to the machines whilst the rider is asleep. I write in no carping spirit, but I venture to think that were a car to start on such a test both the motorcarist and the press would scarcely take any notice of it. Nowadays any runs not observed by the R.A.C. bear no weight, for a very good reason. I met a friend of a rider who recently made an attempt to beat a long distance record, and he told me that every night as the rider finished two friends collared his machine, and ripped off the cylinder, ground in valves, or fitted new ones, and generally overhauled it, so that the rider practically started on a new machine every morning.

Pratt has hit the right thing in arranging his trial under A.C.U. observation.
HARRY G. BELL.

The London-Edinburgh Run.

[5722].—As a sidecar passenger in the above run I shall be glad if you will insert this letter. There were no fewer than a score of cars entered in this M.C.C. event.

The cars started immediately behind the sidecars, and several of them being high-powered, they, of course, caught up the sidecars very quickly, very often passing at a high speed, thereby raising a cloud of dust, which, beside being very unpleasant for the competitors, was, in the majority of instances, highly dangerous, as it was impossible to see anything for some time after they had passed.

One or two of these cars would pull up by the roadside, and shortly after come tearing up again with another cloud of dust in their wake. This, I may add, happened the whole way to Edinburgh.

We heard no end of grumbling at Edinburgh by the sidecar competitors, and also by the back motor bicyclists. If the car owners want a reliability trial let them organise one on their own, and not interfere with the motor cycle trials.

PULVIS.

Power and Sidecars.

[5723].—Referring to the correspondence which has from time to time appeared in your columns regarding power necessary for sidecar work, I thought you might be interested to know that I had the pleasure the other day of a ride in a sidecar propelled by a little single-cylinder engine of only 65 mm. bore, geared about 6 to 1. This tiny engine will with two up attain a speed far above the legal limit, climb steep gradients without pedal assistance, throttle down to four miles an hour, firing regularly, and even take ordinary gradients at this low speed. It was a revelation to me, and will doubtless surprise those of your readers who champion tremendous twins. The little machine weighs over 140 lbs., and the weights of the driver and the writer were 10 stones and 11 stones respectively.

H. F. HENDRY.

[5724].—In view of the correspondence in *The Motor Cycle* from time to time on hill-climbing sidecar machines, etc., the enclosed photograph may be of interest. It depicts my 1911 3½ h.p. two-speed Premier and sidecar on the steepest part of Sutton Bank. I made two clean ascents, with an eleven-stone passenger, as in photograph, on June 22nd. The combination is most satisfactory, as besides its hill-climbing

J. C. Bennett Mitchell, who climbed Sutton Bank on a 3½ h.p. two-speed Premier with sidecar attached.

powers it has a very decent turn of speed on the flat, and is economical to run. Moreover, it is a fairly low-priced outfit.
J. C. BENNETT MITCHELL.

SUMMARY OF CORRESPONDENCE.

H. Lutwyche wishes to thank a fellow motor cyclist who offered him the use of a cover to ride home with, although he was a perfect stranger to him.

NOTICE.

The Editor disclaims all legal responsibility in any way for loss of copy in the form of manuscript, drawings, or photographs submitted to him. Rejected manuscript, drawings, and photographs will only be returned provided a stamped addressed envelope is enclosed for the purpose.

The Wall Tricycle.

To distinguish the tricycle chassis illustrated on June 22nd from other products of the Roc Co., it will be marketed under the title of the Wall tricycle. The frame, fork, clutch, and gear are all covered by patents or registered designs.

Agencies Wanted in South Australia.

A firm already representing a fair range of motor cycles in South Australia is on the look-out for new agencies. Manufacturers of motor cycles and accessories who are not represented in this portion of our Empire can obtain the name and address of the firm in question on application to the editor.

How to Cross the Channel

We are informed by the Borough Engineer of Folkestone that the Zealand Steamship Line on the Queenborough-Flushing route now only runs day steamers, the night boats now running from Folkestone leaving that town for Flushing at 10.45, and arriving at Folkestone from Flushing at 5.30 a.m. Return ticket (available for eight days): First-class 26s., second-class 15s. Single fares for motor bicycles 7s. 6d., motor tricycles 15s., double-seated motor tricycles 30s.

The Brooks Sparking Plug.

The name of "Brooks" being practically a household word among motor cyclists, they will be interested to know that the Brooks sparking plug, which we reviewed a short time ago in these pages, is giving universal satisfaction. Among its merits may be mentioned its ability to withstand the hottest spark, the finest glazed steatite being used in the manufacture of the insulator, and the electrodes are produced from pure nickel. Another advantage of this plug is that it is perfectly gastight, its construction being such as to render leakage impossible. No packing is used, and the body of the plug—which is made throughout of steel—is rendered rust-proof by a special process. Readers who are on the look-out for a first-class plug should make enquiries from the makers, J. B. Brooks and Co., Ltd., Great Charles Street, Birmingham.

A pillion basket seat which can be fitted in four different positions. It is made by Messrs. Henderson, Camden Street, North Shields.

Making Joints and Stopping Leaks.

Conrad W. Schmidt, Limited, Carpenters Road, Stratford, E., sell a large number of preparations which will especially appeal to motor cyclists. "Coverole" is a material for stopping leaks in petrol tanks, pipes, unions, etc. Any preparation which will cure trouble of this kind should be heartily welcome. "Jointilak" is a specially prepared gold size for making oil-tight joints on crank cases, etc.

Goggles for Short-sighted Riders.

An exceedingly serviceable pair of goggles has lately been placed on the market by Messrs. Jaquemin Brothers, Hatton Garden, E.C. The lenses, which are of chlorophyll glass, and obviate

The useful pair of motor goggles made by Messrs. Jaquemin Brothers.

all irritating effects of the sun's glare, are oval in shape, and are of ample size. The goggles, which are compact, dust-proof, and well ventilated, adequately protect the eyes and fit comfortably over the face, and possess the advantage of being capable of being worn over pincez or spectacles, a fact which will strongly appeal to all short-sighted riders. Being made by a firm who have had a long experience in the manufacture of goggles, those under consideration are optically perfect, and, in consequence, cannot injure the eyesight. They are sold in a neat and compact case.

New and Second-hand Mounts.

An interview with Mr. Webster, of the Holborn Auto Exchange, Ltd., 1991, High Holborn, W.C., elicited the fact that the company was doing a brisk business in second-hand machines. The company has also a very good stock of new models, including Bradbury, M.R., and Douglas machines, and one of its specialties is the H.A.L., a smart little machine fitted with either a 3½ h.p. J.A.P. or Peugeot engine; the fittings throughout are Chater-Lea. The machine has also Druid spring forks, and the wheel-base is shorter than the usual motor bicycle. One of these machines gained a gold medal in the London to Edinburgh run.

Speed and Voltage.

It is not generally known that the H.H. battery used by F. A. McNab is a 6 volt one, and it is interesting to record that he used this system of ignition in one of his recent record performances. He hopes to use it again in an attempt on the hour record which he will shortly make.

When Sending Repairs.

We are asked by S. Hall and Sons, 18-20, Swinton Row, Edinburgh, the makers of the F.R.S. lamps, to caution readers when sending repairs to write their names and addresses fully on the labels and to pay carriage. A lamp has been delivered at their Birmingham depot bearing a M.U. and A.A. badge, but there is no address on the label, and the firm have received no letter of instruction. The railway labels are marked Hazel Grove. Will the owner kindly communicate with them?

Repairing Cracked Horn Bulbs.

R. Surridge, 28, George Street, Camberwell, S.E., has introduced a device known as a "horn bulb patch." This is a rubber covering designed to the shape of and made to fit over the horn bulb. It prevents the bulb from wear,

and will enable a cracked one to be used. It is quite effective, as we have tried one personally, and it possesses the advantage of being considerably cheaper than a new bulb. It is sold by the Service Company, Limited, 292-293, High Holborn, W.C.

Catalogues Received.

We are in receipt of the latest booklet issued by the Union Rubber Co., of Manchester, and 4, Great Eastern Street, E.C. In it are found references to the latest type of Turco tyres and every kind of rubber accessory, including repair outfits, tyre plasters, gaiters, motor soap, carbide, waterproof clothing, and numerous other useful accessories. It may be had on application to the firm.

New Pattern Goggles.

W. and R. Jacobs, 39c, King William Street, E.C., inform us that in response to the suggestions made to them by users of the Le Grand Reflex goggles, they are now making the front lens in two pieces, divided in the centre, with a small metal fixing clip. In this way fracture of the glass is extremely rare, as there is a certain amount of "give" in the centre of the frame, while in the remote case of breakage the cost of a new half lens is, of course, half of what the complete fitment would be.

ROVER

MOTOR BICYCLES.

**The Choice of those
who "know."**

The best points of all other Standard Machines, and the many exclusive, common sense improvements devised by ourselves, combine to make the **ROVER** $3\frac{1}{2}$ h.p. Motor Bicycle

The Most Practical All-Round Machine on the Market.

Men with actual road experience—whether they ride for pleasure, for business, or to win—choose the **ROVER**, because they know that for Reliability, Comfort, Economy, and Speed, it stands alone.

At any of our addresses, we shall be pleased to demonstrate the many practical points of this serviceable machine, or Catalogues will be sent on request.

**Throw away your present torturer
and R.I.P. evermore.**

This Week's Testimony—

Cox's Motor Garage, St. Andrews Hill, Cambridge,
Gentlemen,
The representatives of the — Motor Cycle firm have
seen my XL-ALL Saddle. I told them they ought to fit
them as Standard. You will hear from them I am certain.
I have shown it to another Motor Agent, Mr. —, and he
is delighted with it. Can you let me have the agency.

Yours truly, Y. T. COX.

Birmingham Motor Cycle Club,
June 28th, 1911.

Gentlemen,
I am writing to tell you how pleased I am with your
Pan Saddle. I rode this saddle in the Birmingham-Land's
End-Birmingham Competition, a distance of 288 miles at a
stretch each day, and at the end of the run was as comfortable
as if I had been sitting in an easy chair. I suffered neither
soreness nor backache, both of which were common to other
riders in the competition. I am quite confident that your
saddles are The Only Saddle. I am continually urging my
friends to have one. Wishing you every success.

Yours faithfully, R. VERNON C. BROCK, Hon. Sec.

IT SPRINGS MORE THAN ANY
OTHER MAKE.

IT NEVER VARIES ITS TILT
LIKE ALL OTHERS.

IT SPRINGS AT THE PEAK
AS MUCH AS AT THE BACK, WHICH
NO OTHER WILL DO.

A LOWER SEATING POSITION
CAN BE OBTAINED THAN WITH
ANY OTHER.

THE SPRINGS ARE ADJUST-
ABLE TO ALL RIDERS, WHICH
CANNOT BE DONE IN ANY OTHER.

Our output has trebled in 6
weeks, yet not a single saddle is
in stock, so order early to get
quick delivery.

XL-ALL, LTD., 6 & 7, Moseley St., BIRMINGHAM.

Are you
aware that the

"N.F."

MAGNETO

**can be fitted or dismantled
even by inexperienced hands**

Other features which should not be overlooked are the following :

The "N.F." Magneto, by reason of its simple construc-
tion and few wearing parts, has a much longer life
than other makes. The armature cannot burn through
even when considerably overloaded, on account of
a very special insulation and suitable spark gaps.
Space does not permit of mentioning other im-
portant features, we therefore ask you to
send for a booklet, post free on request.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 14 words or less 1/6, and 1d. per word after. Each paragraph is charged separately. Name and address must be counted. In the case of Trade Advertisements a series of thirteen insertions is charged as twelve.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," Coventry, or London (20, Tudor Street, E.C.), by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should state distinctly under what heading and in what issue the announcement appeared.

CLASSIFICATION BY LOCALITY.

For the convenience of purchasers of second-hand motor cycles, the advertisements are classified into districts, as many readers like to know what machines are for sale in their immediate neighbourhood before going further afield.

Plan showing division of England into Sections.

Phone: 5777 Holborn.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, 2d. will be charged for registration, and three stamped and addressed envelopes must be sent for forwarding replies. Only the number will appear in the advertisement. Replies should be addressed, "No. 000, c/o 'The Motor Cycle,' Coventry"; or it "London" is added to the address, then to the number given, c/o "The Motor Cycle," 20, Tudor Street, E.C.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but if not we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions exceeding £10 in value, a deposit fee of 2s. 6d. is charged, when under £10 the fee is 1s. All deposit matters are dealt with at Coventry, and cheques and money orders should be made payable to Thife and Sons Limited.

SPECIAL NOTE

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

.. ALBANY ..

Motor Cycle Clothing

A grand Coat if you are Camping Out.

"ALL-SEASON" JACKET.

Guaranteed absolutely waterproof. In Grey-green Double-texture Cloth to match "Special" and "Standard" Overalls. Double-breasted and fitted with best Detachable Fleece Lining. You may put away that Leather Waistcoat and Jacket, which are very bulky and far too heavy. The Fleece Lining will keep you warm in the coldest weather and if too hot can easily be detached. It is light in weight but very warm. An ideal Jacket for Touring.

Price **25/-**

ALBANY "STANDARD" SUIT.

Guaranteed absolutely waterproof. In Grey-green or Fawn Double-texture Cloth.

JACKETS only. Double-breasted, deep storm collar and adjustable strap to exclude rain and dust from neck. Inside and outside wind cuffs, etc., etc.

18-LEGGINGS only. Leather adjustable boot straps. V-shaped gussets and patent dome fasteners to keep out dust, rain, and wind. Extended gaiter, etc., etc. No tireless buttons. Easily slipped on and off. **8/-**.

Complete Suit **25/-**

The Albany 'Special' Leggings.

A new design to protect stomach from wind and rain. Made in Grey-green Cloth to match "All-Season" and "Standard" Jackets, and also in Fawn. These Special Leggings include every desirable improvement. They come well up over the stomach and have Leather Adjustable Boot Straps, also Gussets and Patent Fasteners. Without Seat, **13/11**. With Seat, including fly and special convenience, **15/11**. Our correspondents tell us these are the best designs and value on the market.

These Leggings, together with an "All-Season" Jacket will protect you from the severest weather.

VULCANISING & RETREADING.

Don't throw your Old Tyres away because they have burst. Send them to us and we will examine them and let you know whether they are worth repairing. No charge will be made for advice given.

Terms, nett cash with order. Goods, if stock sizes, sent by return. Send chest measurement and length desired for Jacket, and inside leg measurement only for Leggings. Send now for Catalogue & samples of cloth to

What the T.T. Races Teach.

“WHAT a farce it is to call the race a *Tourist Trophy*!” was an expression occasionally heard in the Isle of Man, the critics proceeding to enlarge upon the freak character of the machines which contested the two thrilling races.

The secret history of the Junior T.T. gives the lie direct to this criticism. The Junior Race has simply been forced upon a very largely reluctant industry by the wisdom and firmness of the A.C.U. It is simply an educational experiment, brilliantly planned and executed by a coterie of individuals, whom some critics term “unpractical.” Twelve months ago the trade was almost entirely concentrated upon the $3\frac{1}{2}$ h.p. touring roadster. Good business was being done, and if certain firms considered that another type of machine might secure an even larger demand they dared not face the certain cost and possible disappointment which go with the designing, the advertising, and the popularising of a novel type. Here the A.C.U. stepped in. They believed that a variably-gearred mediumweight would in time secure an even larger riding public than the best 180 lb. single gear could ever hope to command. They knew that the individual firms in the trade dared not experiment. They knew that any bold pioneer, ploughing a lone furrow, might fail, and even if he did not fail, was sure to make ground slowly. So they planned a special race for variably-gearred mediumweights, and the hands of the trade were more or less forced. A few firms were already selling machines conforming roughly to Junior T.T. outlines; their rivals had to enter the breach in self-defence. We do not suppose that any of the A.C.U.

prophets expected half such a brilliant success, and we doubt if so many entries were anticipated. The winning machine's average speed of nearly 42 m.p.h. over so stiff a course has surprised everybody, and the most sanguine anticipated that the inevitable variable gears would be freakish in design, and unreliable in the race. Now that the race is over, you have to hunt for the A.C.U.'s critics with a searchlight. For the fastest Juniors—riding variably-gearred mediumweights—beat more than half the field of the Seniors for sheer *speed*, and so far as reliability goes, in the Junior event, 21 starters out of 34 finished four laps, *i.e.*, 61.80%, and in the Senior event, 33 starters out of 60 completed four laps, *i.e.*, 64.51%. The race has, therefore, shown that over as difficult a course as can be found the variably-gearred lightweight is the equal of the standard touring roadsters, the advantages of the latter being increased speed and power for passenger work.

Compared with the Junior event, the Senior Race can only claim a sporting interest. Its technical and evolutionary value is small by contrast. The “ashes” have gone to America, and if there is a Senior Race next year, it will give British manufacturers an opportunity to recover lost kudos from foreign shores. America has always concentrated on the big twin. We in England plump for the ultra-efficient $3\frac{1}{2}$ h.p. single. America thirsts for speed before all else; we rank touring efficiency and convenience foremost, and racing is the pastime of a small minority. A remunerative share of our motor cycle market can only be secured and kept by thrashing us with the $3\frac{1}{2}$ h.p. single-cylinder, and the Americans have a very long furrow to hoe before they can approach us in that direction.

The T.T. Races Reviewed.

An amateur, H. Lister Cooper (Triumph) ninth to finish, descending Bray Hill, which is situated just outside Douglas. The starting and finishing point is seen below the X.

AFTER the Tourist Trophy Races a leading manufacturer asked what in our opinion was the most striking feature, and we did not hesitate to reply the wonderful efficiency of the small twin-cylinder engine, and the advantage derived from a good but light change-speed gear. Think of it, the winner of the Junior Race, using a twin engine of only 339 cubic centimetres capacity, averaged $41\frac{1}{2}$ miles per hour (included in this are three stops), and the winner of the Senior T.T., with a twin engine of 584 c.c., averaged $47\frac{1}{2}$ miles per hour, with only one stop. The comparison is most certainly favourable to the lightweight, and in using the term we should like to make it clear that the twin Humber was as much a lightweight as any machine in the race. It may not be generally known that some of these so-called juniors weighed fully 180 lbs.—more, in fact, than the weight of a T.T. single-gear $3\frac{1}{2}$ h.p. From a study of the valuable tables published in our last issue, giving the specifications of all the machines used by the survivors, together with the individual lap times, some interesting and instructive data are obtainable. Four belt-driven machines led the vanguard in the Junior T.T., and, what would cause no consternation to those lucky enough to possess them, all four had Armstrong-Triplex gears. The next three machines in order of speed had two ratios, two of these employing chains

for the transmission. It is clear from the results that the present day single of 300 c.c. is no match for the twin of 340 c.c., for eight of the first nine machines were twins, and seven of these were of the V type.

The Originality of the Winning Humber.

Four of the eight were by no means of conventional design, and in view of the superiority which they demonstrated, it gives one furiously to think whether there is not more in the off-setting of the cylinders than the average motor cycle manufacturer supposes. We all know the wonderful efficiency of the 2 h.p. single-cylinder Humber, and the makers ascribe a great deal of its successes to the *désaxé* cylinder, and consequently adopted it in connection with their new twin. Another reason why I admire the Humber victory so much is the fact that the engine is a genuine tourist—in other words, a broken valve head would not necessarily fall into the cylinder as in the case of most overhead valve engines—and, further, each valve is independently and much more readily removable when placed side by side. As we pointed out last week, flat faced valves are a feature of Humber engines, and here again one must pause for a moment and consider whether valve troubles are not the very least source of trouble with Humber engines. They certainly did not go through the practising without over-

The T.T. Races Reviewed.—

hauls and replacements being needed, but no case of valve breakages came to our ears. A single piston ring. Why are more ever used? queries the reader. Well, there is this to be said, that, although admittedly more efficient, a broken single ring would place a machine *hors de combat*, but with a reserve ring the loss of compression would be less noticeable. We have not yet exhausted the original features of the Humber engine, for the connecting rods are mounted in a manner different from those of other engines of the same type. One of the rods has side supports formed on it to receive the bearing of the other rod. Thus a double bearing is used, and although the bearing surface is increased the crank pin bearing can be much narrower, and the crank case more compact as a consequence. The Humber engine is the work of a clever young designer in H. H. Rush, who is also responsible for the Humber quadcar.

The double-hinged bearing of the T.T. Humber.

drive, and the remaining two were chain-driven throughout.

On the mountain road. J. T. Bashall (4 h.p. Bat-Jap) is seen approaching the "goose neck." J. T. took no risks, as, although accomplishing a non-stop, he was beaten by his brother Harry, who had three stops to change belt.

The Winning Senior Machines Reviewed.

Like the Junior Humber, the two-speed $3\frac{3}{4}$ h.p. Indians were specially designed and built for the T.T. Race. Hitherto it has been impossible to buy a two-speeded twin Indian under 7 h.p., so that this fulfilment of a general demand may be directly ascribed to the adoption of the Snaefell course—always so strongly urged by this journal. It is not going too far to say that in the seven months which have elapsed since the mountain course was decided upon, three years' pro-

A. H. Alexander ($3\frac{1}{2}$ h.p. water-cooled Rex) on the outskirts of Kirkmichael.

gress has been made in the change-speed gear movement, taking the former rate of advance as a basis. Why only two single-gear lightweights finished the race, and neither of them gained gold medals! In the Senior Race there were eleven single-gear machines among the twenty-eight which survived, and the first one was seventh in order of speed. In direct opposition to the Junior event, chain transmission scored decisively, three of the four fastest machines having chains. Although disqualified, we must take C. R. Collier's times into account in this treatise, as they must remain for all time, and the fact that he stopped six times for petrol and tyre troubles, yet was only sixty-three seconds slower than O. C. Godfrey, proves how fast he travelled when on the move. Seven in all of the twenty-eight employed chain transmission.

Singles v. Twins.

In the battle of the cylinders, the twin easily won, and created no surprise, for it was long ago realised that the single-cylinder was too heavily handicapped. It is a strange fact that, although each year the capacity of the multi-cylinder machines has been reduced, the speed has been increased in inverse proportion. Another year it is felt that equal cylinder capacity will provide a most sporting race, and Mr.

At full speed on the mountain road from Ramsey—J. D. Corke ($2\frac{1}{2}$ h.p. A.J.S.) leading, followed by V. Wilberforce ($2\frac{1}{2}$ h.p. Douglas.)

The T.T. Races Reviewed.—

Eric S. Myers (4 h.p. Scott) at the famous hairpin bend on the Snafell road.

M. J. Schulte, managing director of the Triumph Co., mentioned to me in conversation that in his opinion the twin would have to give the single-cylinder an advantage in a year or two. It is an open secret that the average twin of 1909 was hopelessly inefficient, and it is only in recent years that this type of engine has received the attention it deserved.

The Bore-stroke Ratio.

Turning to the ratio of bore and stroke, we are forced to the conclusion that there is little or nothing in it. I have heard Mr. S. F. Edge say that he considered speed was governed solely by cylinder capacity, and he thought little or nothing was to be gained in this connection by adopting a long or short stroke. And his remarks are absolutely confirmed

by the result. In the past, it has usually occurred that a short stroke engine led, with a long stroke engine a close runner up; this year the conditions were reversed. Further, though a 70 by 76 mm. engine won, a 74 by 62 mm. engine accomplished the fastest lap, and but for trouble might have kept the lap times consistent, but we desire to contradict the statement that Frank Phillips's retirement was due to trouble with his timing gear as reported to the press steward, Mr. F. A. Hardy! Again in the Junior Race there is a perfect medley of bores and strokes. A twin of equal bore to stroke won, a short stroke single was second, and a long stroke twin third. It is worthy of mention that for the first time on record a two-stroke twin proved itself the fastest machine.

In a nutshell, the small twin-cylinder engine has received a magnificent advertisement. Change-speed gears have demonstrated their worth, and, above all, their reliability—of a 75% proportion the troubles with gears did not total half a dozen. There are few other striking lessons. Take, for instance, the burning question, which is the best position for a change-speed gear? In the Junior Race, the first four had three-speed gears in the rear hub, but the designer would pardonably waver in his mind on turning to the Senior Race, in which the winner used a counter-shaft two-speed gear, the second to finish a variable engine pulley (as opposed to the *adjustable* engine pulley), the third and fourth counter-shaft two-speed gears, fifth and sixth variable engine pulleys. Finally, the go-anywhere mediumweight is among us, and threatens to become a rival to the 3½ h.p. s.c. single-gear mount. G.S.

SOME OF THE TEAMS IN THE T.T. RACES.

(1) The victorious Humber riders—S. Wright, D. Brown, P. J. Evans (winner), F. P. Johnson, and A. G. Fenn. (2) H. Martin and D. C. Bolton (three-speed Martin-Jap riders). Bolton won his class in the kilometre speed trials. (3) H. A. and C. R. Collier with their Junior T.T. Matchless-Jap machines. (4) The Douglas team: G. L. Fletcher, W. W. Douglas, V. Wilberforce, and E. Kickham. (5) The N.S.U. riders—K. Gassert, W. Heaton, A. Boldt, R. Drechsler, and J. F. Sirett.

COMPETITORS IN THE TOURIST TROPHY RACES, AND INCIDENTS CONNECTED THEREWITH.

- (1) W. W. Douglas. (2) H. A. Collier. (3) Hugh Gibson. (4) A signaller. (5) Fraceois Saio. (6) A pretty gate ornament. (7) Lord Razlan.
 (8) V. Wilberforce. (9) The winner of the Junior race. (10) R. Drechsler. (11) D. Bolton. (12) O. C. Godfrey, winner of the Senior race, crossing Quarter Bridge.
 (13) C. R. Collier. (14) Petrol tanks make good seats. (15) A German rider refreshing himself. (16) D. Brown pushing his machine past the post.
 (17) A Senior T.T. competitor grazing the footpath at Quarter Bridge.

Valve Position.

One detail received further enlightenment in the T.T. Races. It has long been a commonplace of motor engineering that the "overhead" type of inlet valve makes for greater engine efficiency, and some critics have wondered why some of our leading firms retain the side-by-side type on their touring engines. The answer was plain to any observer in the Isle of Man. If anything goes wrong with the exhaust valve, it is much simpler to remove a cap than to extract an overhead valve and its top hamper. One or two riders, using side-by-side valves, rectified slight exhaust valve troubles inside three minutes. Others, who had to unfasten a petrol pipe or inlet pipe, a valve dome, and a long tappet, spent nearly a quarter of an hour over the same job. Moreover, the side-by-side valves are more getatable; present designers, therefore, make their selection between convenience and efficiency.

The Open Frame.

Somebody said last year that the Scott machine "stuck to the road at racing speeds like a postage stamp." This is a slight exaggeration, as anybody who saw Frank Philipp with both wheels clear of the ground for ten feet at Ballig Bridge, or heard the thump with which he landed, can testify. Nevertheless, there is no doubt these open-framed machines do not bounce and buck like the diamond, and one wonders why other firms do not experiment with similar patterns. The open frame has very obvious advantages from the winter clothing aspect; the Scott outlines prove that it need not look freakish or ugly, and its smooth travel seems to claim pronounced comfort for it. Who will be the first to give us an open-frame four-stroke?

Success of the Armstrong Hub Gear.

For ten years past the industry has been trying to produce an epicyclic two-speed hub, which should be absolutely reliable; and though of late years a few hubs, such as the Roc, Nala, etc., have made good, as the Americans call it, yet there still exists a distinct prejudice against internal hub gears, bred of the troubles of the past.

If anything could slay this blind unreasoning prejudice, the giant-killer should be found in the T.T. Races. In the Junior event no fewer than sixteen Armstrong hubs stood up so well in practice that they were used, and used successfully, in the race. Six of the hubs also figured in the Senior Race, although when first brought out the makers only recommended the gear for use with small engines.

During the race a certain rider was slow in appearing on one of his laps, and a voice was overheard to speculate that his Armstrong hub had gone amiss. An Armstrong director immediately offered to bet the voice £20 to £1 against hub trouble being the cause of the disappearance. This sporting method of denial shows the confidence existing in the minds of those who are responsible for the production and sale of the gear.

Junior Weights.

Several publicists were doing their level best to persuade the gentlemen at the head of firms which figured well in the Junior T.T. to publish the actual weights of their victorious machines. One wily person asked leave to have a certain machine weighed to settle a heavy wager he professed to have made, but apparently his astuteness went unrewarded, for nobody seems to know at all accurately what the "light-weights" really scaled. This concealment is really rather foolish, for the heavier any particular machine weighed, the more creditable are its speed and hill-climbing.

Nobody supposes the Junior machines weighed as little as 80 lbs.; probably no single mount used in the race came within measurable distance of 120 lbs., unless maybe the Alcyons—they looked—and "hefted"—light. Probably the average was a solid 155 lbs. at least. It was a distinct omission not to weigh all machines entered for both events, though without fixing a weight limit. Next year the A.C.U. will probably insist on the weights being verified and published, even though no limit is imposed.

Petrol Reserves.

A refinement which deserves more attention is the safeguarding of the petrol supply. In these long distance days no motor bicycle can be said to carry as much fuel as is desirable; and since a huge tank disfigures a machine, it is well that some method of warning the rider that his tank is nearly empty should be universally adopted. Several three-way petrol taps have been patented, but you will have to search hard to find one on a standard make. One machine is fitted with a small trap-wall in the petrol tank, which holds up a few ounces of petrol; the idea is that when the engine stops, you lift the front wheel in the air, the reserve petrol overflows the dam, and you go on rejoicing to the next garage.

Relying on this fitment in a trial run the other day, I neglected to verify my petrol, and my engine stopped only six miles from a garage. But the patent trap only trapped enough petrol to take me four miles.

Spider Quads.

Our correspondents appear to concentrate their attention on the commercial and manufacturing aspects of this problem. The argument surely is that there is and always has been a steady and extensive demand for a vehicle which does not skid and which provides better protection from the weather than the average motor cycle. The desire to accommodate an extra passenger also is a factor in the question. These three demands cannot well die out, and my own impression is that they will continue to press the idea of a three or four-wheeled motor cycle upon the trade until sooner or later a capitalist and an engineer succeed in solving the serious technical problems involved. There may be delay—long delay, possibly—but the demand will some day create a supply.

Dutch Motor Cyclists' Visit.

THE party of Dutch motor cyclists who visited this country for the Tourist Trophy Races have now returned to their native land, and on their way to Harwich we were afforded an opportunity of again meeting them, this time at the Enfield Cycle Co.'s works at Redditch, where they had been invited by the directors to make a halt in their journey from Liverpool to Cambridge on Wednesday of last week. Soon after eleven o'clock in the morning the advance guard from Kidderminster rode in at the works gates. The remainder journeyed from Newport (Salop) and Chester, and arrived later. The names of the riders and their machines are:

A. Citroen (6 Matchless-Jap)	N. Ruyter (2 M.R.)
J. Ferwerda (5 F.N. 4-cyl.)	P. Raymakers (2½ Vulkaam)
J. C. Neurdenburg (3½ Rudge)	J. M. Bergmans (4 Simplex)
A. J. Kerbert (2½ Douglas)	A. Mannheim (3½ Humber)
G. Eweg (4½ Minerva)	C. W. Wilson (3½ P. and M.)
H. de Vos (5 F.N. 4-cyl.)	

One of the F.N. machines has the carrier specially strengthened with wood supporting stays, to enable a very heavy touring bag to be carried; otherwise the machines presented no special features. The Vulkaam is a Dutch machine with Z.L. engine, and the Simplex is also Dutch with a 4 h.p. German engine. One member carried a small cinematograph apparatus, and several had hand cameras.

C. W. Wilson is the captain of the Cambridgeshire M.C.C., and met the Dutchmen at Cambridge on the outward journey, and accompanied them right through.

A. Citroen is the hon. secretary of the Dutch M.C.C., which has about four hundred members out of the 3,000 motor cyclists in Holland. He told us the party thought the tour the finest they had undertaken, and the roads were a great improvement on those they were accustomed to ride on. Greatly to their surprise, they found the steepest hills in

Douglas, and nowhere on their route in England did they find the steep hills which they had read about in *The Motor Cycle*. We explained that these hills were exceptional, and if they had had to cross Wales or Scotland to get to the Isle of Man they would have told a different tale.

Questioned regarding the T.T. Races, our friends from Holland said the most surprising thing to them was the high speed of the Junior machines, and the great popularity of the change-speed gear in both events. The smoking concert at the Selton, where they met the A.C.U. members, was much appreciated, and they wished to thank through the medium of these pages all who had assisted them in connection with their tour; on all sides they had met with the greatest kindness.

After exchanging cards and greetings, the guests were conducted over the clean and well ordered Enfield factory by Messrs. R. W. Smith and J. W. Davis (directors), and appeared to take a keen interest in all that was shown them. The track was also visited, and trial runs were made on a 2½ h.p. chain-driven Enfield, whilst some tried their hand at batting in the centre of the track, the bowling being performed by an ingenious machine which has been made at the Enfield works to ensure a middle stump every time!

At the luncheon, which was served in the board room, Mr. Davis proposed the toast of "Our Dutch Visitors," and said how pleased they were to see them. Mr. Citroen replied, and called for a Dutch cheer, and a responsive "Hiep, hiep, hoera" immediately followed. The menu card was printed in the Dutch colours, and among the items were "chickens from our own 'En-field'"—a little joke which was fully appreciated.

Soon after 3 p.m. a start was made for Northampton *via* Daventry, where we bade goodbye to our Dutch *confrères*, who crossed from Harwich to Amsterdam next day.

Six members of the Dutch M.C.C. at the Enfield Cycle Co.'s Works on their return journey from the Isle of Man. The party consisted of ten in all.

THE MOTOR CYCLIST'S MECCA.

A WEEK IN THE ISLE OF MAN.

By B. H. DAVIES.

I AM coming to regard the Isle of Man as the motor cyclist's Mecca. What a contrast it provides with England. As I rode up from Northampton to Birkenhead on the Wednesday before the race, my T.T. Rudge won many a sour look along the road—the dust it kicked up, the nervous tremor its healthy bark sent quivering down the spinal cords of horses, the peculiar confusion its mere presence on the highway occasioned in the timid bosoms of elderly ladies; we felt we were only tolerated on the roads, and that a majority of the populace would possibly welcome our entire suppression. This was especially the case in Cheshire, where every point policeman took our time and number—most unwelcome attention, for I had broken an inlet valve, and a large circular piece blew clean out of Geoffrey Smith's back tube and completely disappeared, so that we had to hustle to catch our boat. It is true the voyage across is an unpleasant business; it grieves the heart to see thirty or forty machines chucked in a bristly mass against a bulkhead, and roughly lashed together. It is an odious business to lug a heavy machine up a hundred steep steps at low tide, and haggle with a surging crowd of cadging Manx porters. But once landed, one forgets the disagreeables. The sporting islanders welcome us with enthusiasm, and tacitly suspend their speed laws for

our benefits. They *prefer* us to roar through their villages at forty miles an hour; the buxom Manx wives kiss their hands, the men cheer, the kiddies wave.

P. J. Evans (2½ h.p. Humber), the winner of the Junior T.T., at Ballig Bridge. It was noticeable that the bigger machines jumped much further than the lightweights.

At the examination of the competing machines. We need hardly say that the paper which the group in the centre (which includes the brothers Collier) are busily perusing is "The Motor Cycle."

They *prefer* us to remove our silencers, so that they may know from the clean sharp bark of the exhaust what tune our engines are in. The horse drivers keep to their proper sides—even the pigs seem anxious to apologise for that defect of temperament which makes their progress at times a trifle wayward. Yes, the Island is the motor cyclist's Mecca, and T.T. or no T.T., I hope I may often revisit it. I am a patriot to the backbone, and my old friend Billy Wells will pardon me for saying I should like to have seen an English machine first as well as an English rider; but one crumb of comfort we all got from the red Indian's smashing victory—there had been talk of bringing the T.T. series to an end; but now, after its licking, the English trade cannot decently dispense with at least one more race.

The Procedure on Landing.

Once landed in the Island, there is much to be done in the intervals of waiting for the great day. The younger and more sportive visitors remove all impedimenta from their carriers, tie a gaudily coloured cushion thereon, and spend their leisure giving free pillion rides to dashing little flappers from the card-rooms of the Lancashire cotton mills, who spend their "wakes" week in Douglas, and have susceptible hearts where a handsome youth in gaiters is concerned. I leave it to my colleague "Road Rider" to prepare some useful hints on this subject before 1912. I will

The Motor Cyclist's Mecca.—

only mention two incidents. One youth secured his fair passenger in Atholl Street, and having no free engine, was fain to first of all seat her on the carrier, then push off, step on his foot-rest, and throw his right leg forward over the tank. In this process he

SCENES DURING THE ASCENT OF SNAEFELL.

Picking up speed after rounding the "gooseneck."

A fast stretch of road, near the Bungalow Station Hotel. The gradient at this point is approximately 1 in 15.

A twisty section of the mountain climb. The beads are just too severe to be taken at full speed. The coast line is discernible in the background.

the probable winner. We went the round of the quiet depôts far from the madding crowd, and were granted secret peeps at weird fakements and at portentous pistons, resembling the Irishman's coat.

An Experience with Wired-on Tyres.

On the Saturday I had an instructive road experience. I was using wired-on tyres, and my Rudge was in her best "sixty" form, and just about all out, when "bump, bump, bump," betokened a back wheel puncture. As everybody knows, a wired-on cover spins round in the rim like a Gnome engine as soon as the tube is deflated, and before I could pull up, the cover had worked round for 180°, and the place where the valve of that tube used to grow was a long and fearsome slit. Perhaps that is why the Colliers seldom if ever use one. A passing Triumph courteously fetched me a new tube from the Rudge depôt. I fitted it, and began to make up time. Within a mile the same thing happened again, and a passing Motosacoche fetched me yet another tube, to the great amusement of the Rudge

was a long and fearsome tusk, which projected frightfully from an otherwise no doubt beautiful mouth. So, "Road Rider," before the next T.T., publish a few notes about the superior safety of sidecars, and the wisdom of surveying Lancashire lassies by daylight before putting a carrier at their disposal for a week!

More sedate and elderly riders like myself found other modes of occupation. We had our half-dozen "blinds" round the course. We foregathered with old acquaintances from every corner of England, Scotland, Ireland, and Wales. We visited the lovely glens of the Island. Each—if you can trust its proprietor—is "the beauty spot of Mona." We saw the early morning practice, if we woke in time. We went hill-climbing along freak by-roads; we talked till all was blue about

kicked his handle-bar. He flew off towards the port side, she towards the starboard, and the bicycle continued alone, though not for far. Remounting, an Irish terrier fetched them both off again within ten yards. But the sporting lassie fra' Lancashire did not mind in the least, and when I next sighted the intrepid couple they were taking a beautiful toss at the Ramsey hairpin in an effort to surmount Snaefell. Another rider of repute was foolish enough to make the acquaintance of a lady of the shuttle late one night during the fireworks; and when they met next morning by daylight, he discovered her most striking feature

The Motor Cyclist's Mecca.—

mechanics. Friday's race has already been reported in great detail, and is now stale history. I will only say with what glee a veteran variable gear enthusiast saw the long-delayed apotheosis of the multi-speed machine. The riding was of a much higher class than has ever before been witnessed. Most of our races have been disfigured by the presence of a lot of mad young fools who expect to win at record speed the first time of asking. This year nearly every man rode as though he wanted above everything to finish. The restraint at the corners was magnificent. I am still quite undecided as to the best method of viewing the race. I always adopt the policy of mobility, and using my machine along the by-roads contrive to see the race from half a dozen different points each year: this pays from the spectacular standpoint, but if the race is as tight as Monday's event, it is difficult to be quite sure what is happening. To follow the race with certainty, one must squat opposite the scoring board at the start.

Unequal Conditions.

The great disappointment of Monday's race was that the twins had not been handicapped down to the level of the singles, as practice had already warned us. Some people say the singles were quite as fast uphill as the twins, and that the twins only scored on the level and downhill by touching seventy or seventy-five, as against the sixty of the singles. I am personally quite certain that the twins snatched a few seconds wherever *acceleration* was demanded, especially on the uphill corners, such as the "Goose-neck" and the hairpin. I have seldom heard such a heart-breaking exhibition of conking as some of the quite fast singles gave at the hairpin, and even at some of the flat corners. There was a very marked difference in pick-up between the two types. My contention is rather borne out by the times taken in the flying kilometre on the promenade. The entries were few, but the twins did not show a very marked superiority in speed on the level. I believe they scored in the race almost exclusively by dint of superior acceleration; and, if this is so, the twins may continue to win even if they race against singles of equal cubical capacity. One point deserves mention, which is that the roads were distinctly faster on Monday than on Friday. In the Senior event they were practically perfect throughout;

in the Junior event several quite long patches were not dry until after a couple of laps, and a skid was quite feasible on one or two portions of the mountain road, and along three avenues of the Kirkmichael to Sulby road, where interlacing trees meet overhead for a mile at a time.

A Tribute to Jake de Rosier.

In the Senior event, I think Jake de Rosier showed himself to be as fine a rider as there is in the world. He handled his machine magnificently, and his riding position is absolutely perfect. We must remember it is rather a task to ride in a foreign land, through crowds of spectators who would obviously prefer to see their own countrymen victorious, and Jake put up a very fine race. In two points he has something to learn. He is by no means as good a cornerman as many of our own boys, for his speed experience has mostly been gained on the track, and he seems to know very little about "cutting in," though in wide work he is probably faster than any English rider who takes his bends far out. It further struck me that he is more of a rider than a mechanic. It may be unfair to judge a man on a performance accomplished when he has said good-bye to all chance of a win which he has travelled thousands of miles to gain, and when he is physically exhausted by four trying laps at 45 miles an hour, but Jake's work in the endeavour to put two or three very trifling details to rights at the Ramsey control was very poor. He fumbled and muddled and lost a deal of time that might have been saved. His flying kilometre on the Wednesday morning ridden against the wind was a great deal better than 75 m.p.h. sounds, riding on a narrow curving track slippery with rain. His famous 7 h.p. "No. 21" is a beautiful machine, lighter than most low-powered touring machines, and wheeling with extraordinary ease when the valve lifters are in operation.

This year I made the experiment of travelling by the midnight boat. It is only to be recommended when necessity compels it. The bar is situated at the end of the sleeping saloon, and there is apt to be noise, while in hot weather the atmosphere is intolerable. If the night boat is used on the return journey, some arrangements should be made for petrol at the landing stage, for all Liverpool is asleep when the boat gets in. It would pay a wideawake garage to send a cartful to meet the returning night boats next year.

work.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and should be accompanied by the writer's full name and address.

The Motor Cycle in Ceylon.

[5725.]—Motor cyclists do not know what they are missing by not touring in Ceylon. The hills, scenery, and places of interest in this beautiful and prosperous island would well pay anyone to make Ceylon their holiday resort. Petrol is kept at a good many of the rest-houses *en route*, and I could furnish a list of petrol depots to any intending tourists.

A. M. WRIGHT.

Ceylon.

Stolen Machines—A Suggestion.

[5726.]—Reading letter 5705 in the issue of June 29th, I came across your footnote in which I see you raise an objection to have numbers on the crank cases as suggested by your correspondent. I think his idea sound, and send you a method which we used to employ at a small foundry where I worked. Some of our castings were numbered, and to do this the numbers were carved separately, and gummed lightly on to the pattern for the casting, so that to change from No. 11 to No. 12 all we had to do was to remove the "1" and fasten a "2" in its place, and so on. Might not this idea be applied to motor cycle crank cases?

H. C. TREHERNE, R.N.

Vulcanising Inner Tubes After Punctures.

[5727.]—I have read with interest the remarks of your contributor "Ixion" on the necessity of vulcanising inner tubes after punctures, and beg to differ. For the last three years I and two friends have never used anything but Chemico solution and pieces of old inner tube, and have never had trouble from patches working loose, and we have had our share of punctures. We cover from 4,000 to 8,000 miles each per annum on the following machines: 2½ h.p. De Dion and trailer. 3½ h.p. Matchless-Jap and sidecar. 5 h.p. Matchless-Jap and sidecar. I think you will admit that this list is fairly representative.

J. CAMPBELL.

Lady Motor Cyclists' Performances.

[5728.]—I notice that comparisons are being made in the press between two performances by ladies on motor cycles, the first being the record set up by Mrs. Baxter at New Brighton race track, the other being a performance at Clipstone.

Without going into the question of the power of the machine or the advisability of ladies entering such events as these, I think it would be fairer and better taste if the comparisons mentioned above had been omitted when the reports were sent to the papers. If the comparisons were necessary, it should have been stated fully that, whereas Mrs. Baxter's performance was made on New Brighton track (on which male motor cyclists are not accustomed to travel at speeds much over forty miles per hour), the second performance was made on a straight road, without the bends and other dangers attending the track performance.

Personally, I do not think that such performances will increase the popularity of motor cycling. I trust, however, that you will find room to insert this letter in fairness to Mrs. Baxter. I may say that my only interest lies in the fact that we both live in Liverpool. I have only met the lady once, and have no other interest whatever.

S. W. PHILLPOTT.

Insurance.

[5729.]—Quite recently I had an accident to my motor cycle and sidecar through slipping and running into an obstruction when starting.

I advised my insurance broker, Mr. Ernest Bass, of Bishop's Stortford, next day, and he immediately came and saw me, with the result that an estimate which I had in the meantime got from a firm of repairers, amounting to £8, was passed, and I received the cheque the following morning.

E. LEWIS.

A Dastardly Trick.

[5730.]—Myself and friend had a slight accident on the Knutsford Road between Pickmere and Tabley which necessitated our leaving the machine and sidecar for the night, and when we went for it the following morning, the engine, which was a 1911 twin J.A.P., was removed from the frame and found in a field a quarter of a mile away.

Every wire was cut, the petrol and oil pipes were torn in two, and various other parts were strewn about the road. In fact, the machine, which was a 1911 Zenith-Gradua, was a complete wreck.

Trusting you will give this a prominent place in your paper, as a warning to any other motor cyclist who may be obliged to leave his machine, to place it under lock and key, or otherwise remain with it if at all possible,

P. E. TETLOW.

P.S.—A reward of £5 is offered for information which will lead to the arrest and conviction of the offender or offenders.

Arnold Keyzer, our Cape photographer, who won the first open hill climb promoted by the Cape Peninsula M.C.C., on the Red Hill, gradient 1 in 4. He used a 1910 Scott, but now has a 1912 model on order

Great Retorms in the Scottish Six Days' Trials.

[5731.]-In your issue of the 29th ult., I notice a letter from "T.S. 345," *re* hill-climbs. "T.S. 345" states that immediately after the six days' trial riders had passed over Amulree, J. W. Adamson, of Perth, made a clean ascent with a passenger on the carrier. J. W. Adamson got as far as the hairpin bend, when his passenger dropped off, and Adamson finished the ascent alone. I believe Adamson is quite capable of taking the hill with a passenger, and would have done so on that occasion, but I think his passenger's nerves must have got the better of him, and he decided he had had enough. When J.W.A. is well exceeding the limit—especially round corners—it is not quite a picnic for his passenger.

AD SUM.

Change-speed Gears and Sidecars.

[5732.]-I enclose two photographs of my sidecar combination, which I think might be of interest to a section of your readers. The machine is a 6 h.p. N.S.U. I have owned this machine for eighteen months, and driven it in all weathers over all sorts of roads, and I cannot praise it or its N.S.U. two-speed gear too highly; in fact, nothing ever does go wrong with it except a new clutch spring now and then costing a few pence. Tyre troubles and belt slip are practically all my worries, and it is not surprising, seeing that the combination is weighty, and very often there are three full-sized people on board.

I often think, when reading in your paper of disappointed users of two-speed gears, that they have not had experience of the N.S.U. gear. I have never met any but satisfied owners of it as yet.

My sidecar is a Montgomery; the body I built myself. The top lid lifts up on hinges, carrying the wind screen (celluloid) and the horn with it; there is a side door allowing easy entrance for passenger. It is very roomy inside, contains two large cupboards for spare tubes, etc., and is padded all over, making it very cosy in cold and rainy weather. The screen is adjustable up or down. I can easily do 40 m.p.h. (by the Cowey) on the level.

I suppose it is hardly necessary to say I am only interested in the N.S.U. and Montgomery Companies to the extent of being a very satisfied private owner. Wishing your paper the best of luck,

A. BAKER.

[5733.]-In your issue of June 15th there appeared a grumble about two-speed gears and high h.p. machines used with sidecars.

As I have ample experience of above combination in an 8 h.p. Matchless and rigid type M. de L. Montgomery sidecar which I had delivered to me in March, I think in justice I should relate my brief though varied experience.

I have ridden a considerable distance since then (two to three thousand miles), and that over the worst roads in Christendom (as admittedly some Irish roads are), without the slightest mechanical trouble. In particular the two-speed gear fitted on my Matchless is a very fine piece of mechanism, enabling me to glide off with a full load of from 3 to 4 cwt. from low speed as smoothly as the most efficiently clutched car I know. The change to top when under way is a very simple and convenient procedure, and with the high horse-power one can run almost constantly on top even in fairly hilly parts—a great advantage.

I have had no trouble from slipping on top, and as this gear is arranged I don't see how slipping could take place. *Re* tyres. Your correspondent's experience is not mine, having had a car. I grant you the non-skid tread wears off smartly, but with a sidecar there is no danger of skidding. I would remind your correspondent that there is a difference in the strain of 14 to 15 cwt. (weight of most small cars) coming down on a tyre in a pothole in the road and the 3 cwt. of bicycle and sidecar.

A 30

Re transmission. To my mind the twin belt of the Matchless is perfect, no slipping, and in wear it equals a single belt machine of half this h.p. In short, it fully justifies any claim laid down for it by Messrs. Collier. My wife and two children, who frequently accompany me, are not acrobats, and for my part I consider the steering smoother than that of a car.

As a medical man I use my machine night and day, and in all weathers and on all roads.

F. C. WRIGHT.

The Tourist Trophy Races. Are they Instructive?

[5734.]-It is such an easy matter to moralise and be after-wise, that if it did not seem essential one would not like to refer to the fatal and other serious accidents in the practice for the T.T., but it is quite time we asked ourselves the question, "Is it worth the risk?"

That we have derived much benefit by road racing in the past and that experiences thus gained have helped to evolve the present motor cycle no one can deny. There is, however, no further need to take such risks, and such spectacles as these are only for the morbid. What the would-be motor cyclist wants is not to know if a certain make of machine, properly faked and as much unlike a

A 6 h.p. N.S.U. with two-speed N.S.U. gear and special Montgomery sidecar, belonging to Mr. A. Baker, of Brighton. (See accompanying letter.)

standard machine as possible, can peg along at sixty to seventy miles an hour for a short distance, but if a standard machine with full touring kit will take him anywhere at a good average speed.

It only requires a good lead from motor cyclists for the A.C.U. to doom such misnamed sporting events as the T.T. and to support in a whole-hearted manner the genuine attempt to bring out the best in all makes of machines in such genuine competitions as the A.C.U. Six Days' Trial.

G. PHEBY.

[We publish our correspondent's letter as an evidence of what some motor cyclists think about the T.T. races. With regard to the accusation respecting standard machines, we refer readers to our leaderette page in this issue.—Ed.]

Riding in Long Coats—A Warning.

[5735.]-Perhaps this letter may be of warning to other motor cyclists, who, like myself, wear long macintoshes or coats. I have ridden thousands of miles with a long coat, and always preferred it to a short one, and I did not think they were dangerous. The other day, while returning home *via* Saxmundham, I was sailing along when without the slightest warning my coat tail caught in the chain (5 h.p. Indian) and I was hauled off the motor backwards, and had a very bad spill. Should have been in a very poor plight if it had not happened near some cottages, as motor was on top of me, and I was pinned to the ground and quite helpless. I should like to thank the rider of a Triumph who helped me in every possible way, as he must have stopped some considerable time in effecting repairs to motor.

Trusting this letter will act as a warning,

IL 126.

Change-speed Gears and Sidecars.

[5736].—Anent the correspondence with reference to the power and reliability of machines for sidecar combinations, I am running a $3\frac{1}{2}$ h.p. N.S.U. for touring work with every satisfaction. The engine is 80×80 mm., thus being somewhat smaller than this year's model and most of the standard $3\frac{1}{2}$ h.p. machines. The sidecar is a rigid Millford. The weights of passengers are 11 stones and 8 stones respectively, to which must be added a small luncheon basket, a photographic outfit, and frequently a kit-bag weighing close on 2 stones when packed, while the dog weighs a stone and a

The $3\frac{1}{2}$ h.p. sidecar combination referred to, by H 8376.

half. I can do 20 m.p.h. on good average give and take roads, and riding recently from London to Ross-on-Wye, the only hill I could not climb to the top with full load was Dashwood Hill. Returning, the long hill out of Stroud necessitated discharging the passenger, and White Hill, on the London side of Henley, had to be negotiated by running alongside the machine for the last half of the climb.

A friend has a $3\frac{1}{2}$ h.p. two-speed Humber with sidecar which he has used extensively for nearly two years, and he finds only an occasional hill he cannot climb. The other day we rode from Brighton to London together in the rain and with heavy roads, and he had a total load of 28 stones. There are times when we should welcome a little more power, but on the whole we score in the matter of simplicity and economy. Belts seem the heaviest item, an inch rubber belt only doing about 1,000 miles. Regular lubrication is essential, and thick engine oil is preferable to grease for gear lubrication.

H 8376.

Conduct in the Isle of Man.

[5737].—I cannot help referring to the disgusting and dangerous conduct of many of the motor cyclists attending the T.T. meeting in the island—conduct which must eventually close to us the only roads open for speed trials.

The way the promenade was crowded with mad motorists was certainly most dangerous, but luckily no accidents occurred to those immodest women who seemed to let all decency fly.

Possibly these motor cyclists will remember that the Sahara Desert will soon become the only speed trial ground left to us if such conduct is persisted in. Where were the police?
SUNLIGHT.

Foreign Machines and English Riders.

[5738].—The success of three American machines in the T.T. race must be rather a disappointment to natives of Great Britain. It certainly is to me, and on looking at the results I find that the riders are all English, and that the American machine ridden by Americans did not make nearly so good a show.

As a designer of things myself, I would be sorry to belittle the winning machines. They must have been good to succeed; also I would give any credit for their riding ability to the pilots of them, but greatly regret that their patriotism is not in the same class. If a foreign machine ridden by a foreigner of any nationality can win, by all means let us congratulate him, and then learn what we can from his victory, but for our best riders to select such machines for their mounts to assist the astute Yankee to sell them here, instead of allowing him to demonstrate their merits himself, is poor patriotism and commercial lunacy.

Let us hope that by next year a few new stars will have arisen with equal ability and more love of their own country, and I am sure their success will be applauded as it will deserve.
A. C. DAVISON.

Acetylene Gas as a Fuel.

[5739].—In your issue of the 15th ult. we find some very interesting remarks under the heading "Acetylene Gas as a Fuel."

We would like to point out that the fears expressed in your footnote are a little over-stated. There are dozens of stationary engines in this and other countries which have been working for years with acetylene alone, and they work quite satisfactorily. The reason why acetylene has not been adopted on a much larger scale for motors is simply one of cost, elaborate experiments having shown that the cost for the fuel is 50% to 100% more than if petrol or petroleum be used. The high temperature obtained through the combustion of acetylene, while making it an economic medium of light, does not play so important a rôle when used in explosion motors.

R. Campbell, who made fastest time on his $3\frac{1}{2}$ Triumph.

M.C.C. Third Race Meeting at Brooklands.

Competitors speeding round the track in the first lap of the club championship race for touring motor cycles.

BEAUTIFUL weather, which was at times almost intolerably hot, especially to those whose point of vantage was the shelterless fork, favoured the M.C.C. third race meeting and gymkhana which was held at Brooklands last Saturday. The meeting provided good fun to a very creditable number of spectators, the principal attraction being Jake de Rosier's successful attack upon world's records, and there was also some excellent flying during most of the afternoon and evening. The programme embraced altogether no less than thirteen events, including three gymkhana competitions.

Jake de Rosier, who had been sitting in the shade of the judge's box, and viewing the events with a non-committal complacency, got his 7 h.p. Indian "21" out shortly after 6 o'clock, when the sun had been robbed of most of its penetrative powers, and there was little or no wind. It was announced that he would make attempts upon world's record times for the flying kilometre, flying mile, and flying five miles. The two former were timed over the railway straight, and in order to give the spectators at the fork a show of speed Jake de Rosier got a start some little distance up the track and came past them all out.

At the first time of asking it was perfectly clear that his machine was in good fettle, and he skimmed over the track with a musical purr that to the practised ear indicated plenty of power and thorough lubrication. Taking the bank under the members' bridge fairly high up he got a fine down-hill start on to the straight, and with his helmeted head tucked well down upon the handle-bars disappeared from view behind the railings, only to reappear again in a remarkably short space of time in the neighbourhood of the aeroplane sheds. This preliminary effort was apparently abortive as Jake de Rosier fell a victim to his besetting sin of bumping his chin upon the handle-bars, and as soon as he arrived at the fork several handkerchiefs were tied round the bars and another round the rider's chin to act as a buffer.

Owing no doubt to the fact that in the programme Jake de Rosier was merely announced to go for world's record, the majority of spectators failed to realise the exact nature of the kilometre trial, and were quite under the impression that

he would go all out for several laps, instead of which, he, of course, slowed down immediately after passing the kilometre finishing line.

With the improvised protection over his chin he was soon off again, and this time got going thoroughly well, and succeeded in covering the kilometre in 26½s., or at the rate of 85.32 m.p.h. As soon as these figures had been put up by Mr. W. H. Wells upon the blackboard there was quite a considerable outburst of cheering, and it was realised by the "doubting Thomases" that the great Jake was fairly in earnest and meant doing things. This was further

Jake de Rosier (7 h.p. Indian), who broke three world's records at Brooklands last Saturday, the highest speed he reached being 87.38 m.p.h.—the best ever accomplished on a motor cycle. When confirmed, this performance will supersede Henri Cissac's long-standing record of 87.32 m.p.h., made on a machine of greater capacity.

M.C.C. Third Race Meeting at Brooklands.—

Lining up for The start of the 560 c.c. handicap race.

ensured by the next run round, in which, after getting away past the spectators, he went out for the flying mile. Evidently his motor was improving rapidly, for under the same weather conditions as he had for the kilometre he succeeded in covering a mile in 41½s., or at the rate of 87.38 m.p.h. From the spectacular point of view, the five miles was the best distance of any, as de Rosier came twice past the fork at full speed. Crouching low over his machine, and sitting it as though riveted to the saddle, he flew along as if the track were as smooth as a billiard table. The engine, although very highly-gearred, was fairly humming round, the machine leaving behind it a faint trail of blue smoke. In an incredibly short space of time he again passed the spectators, and, bearing towards the inside of the track, was hugging the railings on the big banking.

The five miles was covered in 3m. 43s., giving a speed of 80.72 m.p.h. The 7 h.p. "21," with the exception of the latest type of spring forks, looked for all the world as though the big twin engine had been planted in the frame of a path racing push cycle. Only such things as are absolutely necessary find a place on the machine, and there are no throttle or brakes. The engine is standard in every respect except that the valve tappets are lighter and not adjustable, and that auxiliary exhaust ports are drilled in the cylinder walls.

Jake's costume is also worthy of note. He wears a padded steel helmet, a brilliant blue sweater, black tights, brown leather gaiters, and black sand shoes. He used the American Blue Streak tyres.

The Touring Machine Classes.

The first event on the programme, the Class A motor cycle race for ordinary touring machines with single-cylinder engines not exceeding 560 c.c., brought out seventeen starters, the distance being three laps of the track. The result was:

Rider and machine.	Handicap.
	m. s.
1. E. A. Colliver (3½ Zenith-Gradua) ...	1 15
2. G. T. Gray (3½ Rudge) ...	0 18
3. G. E. Purchase (3½ Triumph) ...	0 18

A. W. Brittain (3½ Rudge) ran into second place, but was disqualified for not using mudguards. Class B race was for touring mounts with engines between 400 and 1,000 c.c., for the same distance. There were only two starters, Dr. C. J. Stanley (5 h.p. Indian) giving 18s. to C. Percival (6 h.p. Zenith). The latter won by 300 yards, after a good race.

Any Type Class.

The next event was for single-cylinder motor cycles, any type, not exceeding 560 c.c., for three laps of the track, and open to any member of the M.C.C. McNab, on a 3½ h.p. Trump-Jap, looked like winning this race, but towards the end of the last lap the belt rim picked up a stone, which caused the belt to jump off. The first three positions were:

Rider and machine.	Handicap.
	m. s.
1. A. Baker White (3½ Trump-Jap) ..	0 21
2. Alan Hill (3½ Rudge) ...	0 36
3. Rex G. Mundy (2 Alcyon) ...	2 54

The fifth event was an inter-varsity race, Oxford v. Cambridge, but, unfortunately, no Oxonians were present to defend their *alma mater*, and the competition became therefore a two-lap "scrap" between half a dozen Cambridge men, the winner being A. E. Sheppard, with — Gray second.

Class E motor cycle race was an open event for motor cycles with multi-cylinder engines of between 400 and 1,000 c.c. capacity, distance four laps. There were only three starters, and the result was S. Tessier (5 h.p. Bat-Jap), scratch, easily beat V. Oisson (8 h.p. Oxted-Jap).

The ten-lap club championship, for the "Harry Smith" Gold Challenge Cup, open to ordinary touring motor cycles, under handicap, produced twenty-two starters.

B. M. Mariani (2½ h.p. P. and M.), O. L. de Lissa (2½ h.p. Motosacoche), and J. Holroyd (2½ h.p. Motosacoche) were given a liberal handicap, and went a considerable distance before anyone else started. At the end of the first lap, de Lissa was just leading Mariani, but a lap later both the Motosacoche had dropped out of the race. N. D. Slatyer (2 h.p. Alcyon) went very well, but the lap and a half he had had to give to Mariani was more than he could pick up.

A big bunch of singles went off at 5.40 p.m., or nearly a quarter of an hour after the first lightweights, and of these A. W. Brittain (3½ h.p. Rudge) was easily the fastest, and travelled very consistently. The scratch man was Arthur Moorhouse (7 h.p. Indian), who was giving some minutes away to S. T. Tessier (5 h.p. Bat-Jap). Moorhouse immediately got going at a tremendous speed, and overhauling competitor after competitor easily came home first. Result:

Rider and machine.	Handicap.
	m. s.
1. A. Moorhouse (7 Indian) ...	SCR.
2. B. Mariani (2½ P. and M.) ...	19 30
3. L. A. Baddeley (3½ Brown) ...	5 40

Brittain ran into third place, but was again disqualified.

Breakdowns were extremely common, and a bare half of the starters completed the distance.

After the racing was over there were three gymkhana events. The first was a motor cycle "Life Belt" race, in which the competing machines were placed on a line, the driving belt having been removed to the satisfaction of the judges. The competitors, starting from a line of about one hundred yards from their machines, had to run to them, carrying the driving belts and their fittings, refitting the belt, and riding the machine back to the finishing line. Some extraordinarily quick work was seen. The result was: 1. H. A. Cooper (3½ h.p. Bradbury); 2. A. W. Brittain (3½ h.p. Rudge); 3. W. F. Guiver (3½ h.p. Kerry-Abingdon).

Arthur J. Moorhouse (7 h.p. Indian), winner of the M.C.C. club championship, which carries with it the "Harry Smith" gold challenge cup.

THE greatest event of the year in the motor cycle world is the International T.T. Race, which assembles the cream of the best competition riders from all parts of the United Kingdom, as well as riders from Europe and America. The course of 37½ miles has to be covered five times, and competition is so keen that many of the entrants spend a fortnight or even more in so accustoming themselves to the course that they can take corners and bends at almost twice the speed that the average tourist ever attains in similar circumstances.

A Practice Day.

A few words on a typical day's work during this preliminary practice. Our headquarters are in a quiet little hotel close to the course, but away from the bustle and distraction of town life, so that rest can be obtained after strenuous work, for, as Jake de Rosier remarked, practising for the T.T. Race is no "tea party." Roused by the Boots at 3 a.m., wet or fine, we growl and go to sleep again. The unrelenting Boots, however, returns just as one is enjoying a few minutes' "cosy," and you have to get up muttering unkind anathemas against this rude disturber. A few minutes for dressing and donning racing cap and goggles and we are soon down in the workshop; machines are quickly wheeled out, with a hurried glance to see that everything is in order, and we are on the course, petrol and oil tanks having been filled overnight.

On the Mountain Road.

It does not take long to reach the foot of Snaefell, the mighty hill that everyone thought no single-gear machine hot from racing could climb. The hairpin corner soon comes into view, and speeds are slackened to about 15 m.p.h., safely to negotiate the bend. Just as I am gathering speed again the sound of an overtaking machine reaches my ear, and it passes in a few seconds at a good pace, for is it not one of the machines fitted with two or three gears, which can do such splendid corner work on account of the "pick up" on the low gear? But I know my machine is fast and well up to its work this morning, and before another mile is travelled I have passed this rider, and have the road to myself again. The "Goose-neck" is the next difficult corner to get round, but by keeping well out till half-way round and then cutting close in it is soon conquered, and then for the next few miles the mountain road is narrow and very loose, but after several days' practice little notice is taken of the surface. The fog or mist which is frequently met with on the mountain is very disconcerting, and unless great care is taken one finds oneself approaching an acute bend in the road "all out"—brakes have to be jammed on in a most uncomfortable manner, and the corner taken with perhaps a nasty skid, which may or may not result in a fall.

Leaving the mountain past the last gate, where the gatepost on the left seems to stand out in the middle of the road, the fastest part of the whole course is reached, and the machines tear down the hill at speeds close on 70 m.p.h. The single-gear engines are literally shrieking as they revolve at tremendous speed owing to the comparatively low gear used to make the ascent of Snaefell possible.

However, pumping in oil every four or five miles, one lap of the course is completed, and I stop where my timekeeper

is located, who reports still further progress, and I am pleased to find that another two minutes have been docked off my previous best.

There is no riding at high speed on the road after six o'clock, as farmers' carts, cows, and sheep are about, and so make practice dangerous. There is, however, time for another lap to be done at medium speed, just to get used to the course, with sundry stops here and there to greet old acquaintances. The morning's work is, however, not yet done, as the hotel yard is quickly filled by other competitors arriving, and is transformed into a crowd of workers, all striving their utmost to make their engines just 1 m.p.h. faster.

Hence an hour or so is spent in cleaning and making adjustments to the machine, and the gong goes for breakfast, which of all meals throughout the day is the most acceptable.

The forenoon is occupied, as a rule, in taking off and examining cylinders, cleaning pistons, and truing up valve seatings and other odds and ends, although sometimes the greater part of the day may be occupied in remedying a bad mechanical breakdown. Such is an average day's work whilst preparing for the race.

The Race—Starting.

The eventful day at last arrives, and as the start does not take place until 10 a.m. we decide, as our machines are quite ready, to remain in bed until 7.30 a.m., and get all the rest we can to prepare for the coming ordeal. After a good breakfast and one or two sandwiches taken to the start, to be consumed before the race commences, by 9.30 o'clock we are on the road at Quarter Bridge, which presents a scene of animated excitement. Some competitors, of a nervous temperament, are still busy adjusting their machines and tinkering here and there, and all is hurry and bustle.

At last, thank goodness 10 a.m. arrives, and the first two men are despatched with a hearty send off.

A few minutes elapse before I get the word to go, but it nevertheless seems a lifetime; at last, however, the signal is given, and with one final look at the machine I am soon off amid cheers from friends and well-wishers, but before I have thoroughly got going, the brakes are jammed on and speed reduced to about 10-15 miles an hour to enable me to get round the right angle bend at Quarter Bridge. Once over this and the race has begun in earnest, for the road is fairly straight up to Ballacrairie Corner.

My engine is behaving splendidly and is pulling well. I endeavour to catch the man that started half a minute in front of me, and so get at least one position better. Giving the engine a good pumpful of oil and crouching low down on the machine, the engine begins to roar and I soon overtake the one in front, which proves to be a single-cylinder of a different make from my own but fitted with a gear.

Passing and repassing each other for the next few miles, I am at last able to show him my back wheel for good, past Ballacrairie Corner, which is taken in the opposite direction to that of last year. Through Glen Helen I tear at almost full speed, for I know this part of the road well, being part of the old course. After Ballig Bridge, where the machines are thrown into the air, comes the ascent of Creg Willey; the bottom corner is taken with care, for the

The T.T. Races from a Competitor's Point of View.—

fatal accident to Surridge during the practising is remembered, and we are determined to run no risks.

The Intoxication of Speed.

The road down hill to Kirk Michael corner is very fast with a good surface, so down this portion I grip the handle-bars, hold the tank with my knees, and tear along with engine doing over 3,000 revs. a minute. I begin to wonder whether the engine will really stand it, so great is the pace.

The sensation is superb and yet appalling, for the intoxication of speed is on me as I am launched forward like a human projectile, but I have full command of my senses, and know that the perils of this very race for life, so to speak, are like skating on the thinnest of ice.

On and on, rounding a bend in the road and almost skidding round a corner, I proceed, passing a competitor here and there by the way side, until Sulby Bridge is reached, where brakes are frantically jammed on, pace slowed down as the bridge turning is made, and, bearing to the left, speed is again increased. Another pump of oil and we come to what is perhaps the roughest part of the road, that leading into Ramsey for about four miles.

My front wheel is jumping all over the road, caused by the potholes—veritable death traps—but wrists are strong. Ramsey is reached at last, and turning to the right and again quickly to the left we are soon past the depot, where supplies of petrol and oil will be taken in on our next round.

At the foot of Snaefell I am wondering how I shall be able to take the hairpin bend and also the goose-neck further on with a hot engine. However, these are conquered in succession, and the rest of the mountain climbed, swerving first to the right, next to the left, and slowing down to a bare 20 m.p.h. for some of the corners on this wild mountain road among the clouds.

Further down the other side can be seen a gate, the post of which stretches well into the middle of the road, and necessitates a slackening of pace. Hark! what is that crackle in the rear that gradually seems to get nearer and nearer as I race down the mountain helter-skelter, full of forebodings. It passes, and I see it is one of the Indians with their two-speed gears, ridden by Jake de Rosier. On top gear the machine is several miles an hour faster downhill, but nearing the bottom I hold him for the next mile or so on the straight and uphill, but later he gets clear.

A Keen Eye and Steady Nerves.

In the distance is a bend in the road that I know from previous practice can be taken all out, but this is where careful judgment and cool nerve are required, for the miscalculation of an inch or two means the end of all things.

On and on I go, until I reach the start again. Shall I finish another four laps? Rounding the Quarter Bridge and giving another pumpful of oil to the engine, I again get ready for another few miles of speed work on towards Ballacrine Corner, and on again through Glen Helen, up Creg Willey's Hill, down again to the corner in Kirk Michael, where last year so many spills were recorded. This year we take an easy bend to the right instead of the difficult turning to the left, and then on through the narrow streets, of which the houses appear almost to touch both sides as I tear through at fully 55 m.p.h. I feel sure of myself and the road, for have not notices been sent round to all those living on the course that all children and domestic animals must be under proper control, under the penalty of a heavy fine? Sulby Bridge again is heralded by three large red banners across the road at intervals to warn competitors of its extreme danger.

It is just here that I am passed by another twin rider who has been hanging on for a mile or two. He was not quite so fast on the flat, but has evidently had some practice on the corners, for he takes the corner beautifully, and is away in the distance before my machine can pick up its speed. This does not worry me unduly, for it is only the second lap, and I may meet him again on the roadside doing a repair job. Who knows?

Over the bumps again, one sits tight for very life. The front wheel jumps over the road, and only with herculean strength is it every time brought back to its correct track.

Who is it that thinks it does not require an athlete for T.T. racing under these conditions? The palefaced, over-nicotined youth who spends his spare time in the billiard saloons or in front of hotel bars would not stand ten miles

of this gruelling. A broken arm or leg is easily earned, and it requires the teeth to be set hard and a watchful eye kept on the road at every moment if life and limb are to be preserved and a finish well up in the list to be achieved.

Rounding the bend at Ramsey we remember that a stop has to be made at our depot and petrol and oil are quickly taken in. At the same time the chance is taken to remove a slipping belt.

With cheery words from my helpers I again make a start and soon reach the foot of Snaefell, and further along the mountain we come up to our friend on the twin who has landed himself into the ditch by taking a corner too fast and going wide. A mile or two of this searching, bumpy, perilous riding over the rough mountain roads and all at once I detect some slight irregularity of running which soon slows the engine, and as the machine races down the side of the mountain I can hear an occasional and annoying misfire. What can it be? Is it an inlet valve spring weakened? a seating warped or cracked? or perhaps it is a defective plug? It becomes worse. Quickly jamming on brakes and dismounting, the plug is examined first, and though almost red with heat it is extracted with gloved hands and examined. The central electrode has given way under the furious battle of flame, so another one is inserted, and I am on once more, retarding the spark a shade to prevent that ominous "konk" that engines will give when their load is great at starting and they are tired. Fingers gradually advance the ignition lever, and the engine is once again coaxed to put forward its best—a pumpful of soothing oil is given and it responds. Further along the mountain top come the bumps which nearly throw one clear of the bicycle altogether.

The Desire for Sleep.

Passing through the last gate on the mountain which is taken with caution, we give a furtive glance at the spot where a number have collided with the bank.

On and on, passing one after another, till the procession grows thinner, the weaker ones falling out by the roadside. Past the start again, the course seems to get harder and bumpier: the muscles soften and tingle as the thoughts of welcome rest and sleep force themselves upon me, but bracing myself together and steeling my nerves for one more dash, putting desire for comfort and sleep on one side, the corners and bends are taken with a little more recklessness, and visions of houses, hedges, people, etc., scurrying past in their headlong flight come to me as I am launched forward for the last time through Glen Helen and over the bumpy Ballig Bridge, which is taken with a daring leap right into the air, landing on the other side with a sickening thud. The tired engine is not emitting that healthy crackle of the exhaust denoting perfect fettle, but its note seems to the rider more like one long drawn out sigh, as though it would fain take a long, long rest, but it turns over and over, still as fast as ever, obeying the will of its master.

One or two riders pass me on this lap, but as I have also in my turn passed many I know I am still holding a good position. Will my trusty steed take me through the next twenty miles? I have great confidence in it, for it rarely plays me false. After rounding Ramsey corner for the last time, the brake is jammed on, and the machine is brought obediently to a standstill for more petrol. Supplies are taken on in a few seconds.

Quickly making a start, I am sure my wrists are beginning to feel the strain, though they are good for more hard work before they give out. A sharp corner on Snaefell is taken too fast, and my heart leaps into my mouth as I ride for several yards on the edge of a ditch, but lifting the valve has slowed the pace and enabled me once more to gain the right track. After this the next corner is taken a shade slower, for I am riding to finish, and the slightest swerve may put me *hors de combat* at any moment.

Two more miles and with luck it will be over and the race run. One last pump of oil is given, soothing the bearings of the engine already very very tired, the valves badly charred and burnt and their springs robbed of all their vim, softened by the punishing work they have done. Up the last hill we tear, and finally hurl ourselves past the winning post. Friends rush forward to shake hands, machine and rider are carried away amid cheers from the crowd. We enjoy the feeling of perfect rest for some minutes, whilst refreshments are tendered and eagerly taken.

And so ends the T.T. Race. The reward—a gold medal! Hurrah! Thus is the curtain rung down upon the ever memorable battle of cylinders in 1911.

PETROL.

CURRENT CHAT

SPECIAL FEATURES.

M.C.C. RACE MEETING AND GYMKHANA
AT BROOKLANDS.

THE T.T. RACES REVIEWED.
NEW LADY'S MODEL.

Police Traps.

Caution should be exercised in Walsall and district; the police are active owing to several accidents which have occurred lately.

Thieves at Work Again.

A 1909 8 h.p. Matchless with Nala two-speed hub gear was stolen from a garage at Croydon on the evening of the 30th ult. The owner is R. Snee, 18, Canning Road, Croydon, who will be glad to have information respecting it.

Sidecars and Change-speed Gears.

The Enfield Cycle Co. are placing a 4 h.p. sidecar machine on the market for next year, but have not yet decided whether this will have a twin or single-cylinder engine. However, the Enfield change-speed gear and chain transmission will be used, which are particularly suitable for passenger work.

First Open Hill-climb at the Cape.

The first open hill-climb organised by the Cape Peninsula M.C.C. was held at Red Hill the usual A.C.U. formula being adopted. The distance of the climb was 1,600 yards. The competition resulted in a win for A. Keyzer (4 h.p. Scott), the second being J. Thornton (3½ h.p. Bradbury).

Proposed Record Attempt.

In preference to riding in the T.T. S. A. M. Witham has been spending his time tuning up for a record a 5 h.p. twin Bat-Jap. It is much on standard lines, except for a huge petrol tank. This rider is also expecting delivery shortly of a new pattern 8 h.p. overhead valve Matchless-Jap. The bore and stroke of the engine on this new machine are 90 x 77½ mm.

Lyons M.C. Race Meeting.

The Motor Cycle Club of Lyons held a meeting at the Velodrome Lyons on the 2nd inst., which resulted as follows:

Hour Race (quarter litre).—Escoffier (Magnat-Debon), 61.3 kilometres = 38 miles.

Club Championship (five kilometres).—Debeaune (René Gillet), time 3m. 55½s. = 47¼ miles per hour.

Hour Race.—Mazue on a machine of his own construction, with engine not exceeding .333 c.c., succeeded in covering just under 46 miles in the hour, which does not compare very favourably with the British hour record for 350 c.c. engines (52 miles 1,650 yards) made by Colver on a British-built Matchless.

A Correction.

The lady in the photograph published last week on page 696 is Madam Frasseti. We offer our sincere apologies for the error in the inscription, and for any annoyance which may have thereby been caused.

Spanish Road Trial.

At Tarragona, on the 2nd inst., the Sama Cup, which was competed for in a road trial, was won by De Vay on a 2½ h.p. Magnat-Debon in five hours, distance 210 kilometres, equivalent to 130.4 miles.

TIME TO LIGHT LAMPS.

July 13th	9.10 p.m.
" 15th	9.9 p.m.
" 17th	9.7 p.m.
" 19th	9.6 p.m.

Slow Vehicles in London Traffic.

A draft byelaw has been prepared by the London County Council which will render it compulsory for slow-moving vehicles to keep to the left or near side of the road.

Speed Limits.

Local Government Board inquiries into the applications for ten-mile speed limits at Stony Stratford (Bucks) and Rhayader (Radnorshire) were recently held. Representatives of the R.A.C. and A.A. and M.U. who were present were ready to concede a portion of the main Holyhead Road in Stony Stratford where there are cross roads, but the remainder of the application was fought on the grounds that the conditions existing did not justify the imposition of a reduced limit.

With respect to Rhayader the application was strongly opposed, but finally an agreement was come to between the applicants and the objectors. Two portions of roads in Rhayader regarding which the applicants and objectors could not agree were left to the discretion of the L.G.B. inspector.

Our series of photographs "Married Couples who Motor Cycle" have created much interest. The above photograph depicts the Rev. J. Moreom Taylor and his wife and children, of Scarborough, on their 1911 Motoscoches. They ride a great deal, and often carry their children on cushions on their carriers for some distance, the children taking hold of a belt round the rider's waist.

Number of Motor Cycles in France.

According to the latest returns the total number of motor cycles in France in 1910 was 27,057, against 26,140 of the previous year, an increase of only 917.

World's Record Speed.

Only for the second time in England was 87 m.p.h. exceeded on a motor cycle last Saturday. Henri Cissac was the first motor cyclist to attain such a speed, when at Blackpool on July 27th, 1905. he covered a flying kilometre in 25 $\frac{3}{4}$ s. = 87.32 m.p.h. Cissac rode a 12 h.p. Pengeot. Last Saturday, Jake de Rosier, riding a 7 h.p. Indian, was timed to cover a mile in 41 $\frac{1}{2}$ s., which is equal to a speed of 87.38 m.p.h.

French Road Race.

The Grand Prix des Motocyclettes, organised by the Moto Club de Marseille, will be held on August 27th on a fifty kilometres course, which has to be covered four times, making a total distance of 124 $\frac{1}{2}$ miles. The event will be divided into four classes—Class I., machines with engines not exceeding 250 c.c.; Class II., 333 c.c.; Class III., 500 c.c.; and Class IV., engines of any power.

A Novel Track Racing Event.

During the first week in August the Sutton Coldfield A.C. will hold a race meeting on the Aston track for light-weight machines complying with the T.T. regulations as regards size of engine. There will be scratch races and handicaps, and the principal event of the day will be the half-hour efficiency race, prizes for which will be awarded for the best performance on a formula which will take into consideration the four following factors: Total weight of machine and rider, distance travelled, size of engine, and petrol consumption. The last-mentioned event should arouse a great deal of interest, for it is believed to be the first of its kind ever held.

British Imports and Exports of Motor Cycles.

For the last three years the value of French imports of motor cycles and parts were:

1909.	1910.	1911.
Motor cycles—		
£5,413	£6,389	£5,973
Parts thereof—		
£1,951	£4,615	£4,144
£7,364	£11,004	£10,117

The exports during the month of June in each year are represented by the following figures:

1909.	1910.	1911.
Motor cycles—		
£3,293	£7,859	£13,408
Parts thereof—		
£2,258	£3,569	£3,731
£5,551	£11,428	£17,139

The Figures for Six Months.

For the six months ended June 30th the imports showed a total of—

1909.	1910.	1911.
Motor cycles—		
£23,624	£26,974	£28,528
Parts thereof—		
£11,736	£28,344	£33,413
£35,360	£55,318	£61,941

FUTURE EVENTS

July 13—Irish End-to-end Run.
 „ 15—North Middlesex M.C.C. Open Hill-climb.
 „ 15—B.M.C.R.C. Open Race Meeting.
 „ 15—A.C.U. Mid. Centre Open Hill-climb at Much Wenlock.
 „ 22—A.C.U. Quarterly Trial (Northern).
 „ 22—Torbay and District M.C.C. Open Hill-climb.
 „ 22-23—Bradford M.C.C. Open Reliability Trial to Dunbar and back.
 „ 24-29—Scottish Six Days' Reliability Trial.
 „ 29—Bradford M.C.C. Third Annual Open Hill-climb.
 „ 29—R.A.C. Associates' Gala Day at Brooklands. Cars and motor cycles.
 Aug 7-8—Dublin and District Open Two Days' Reliability Trial.
 „ 14-19—A.C.U. ANNUAL SIX DAYS' RELIABILITY TRIAL. HARROGATE AS A CENTRE.

The British exports are given hereunder:

1909.	1910.	1911.
Motor cycles—		
£19,814	£44,019	£95,878
Parts thereof—		
£16,522	£19,006	£30,393
£36,336	£63,025	£126,271

It will be noticed that the exports for the first half of this year are double the amount they were in 1910.

Yorkshire Open Hill-climb.

The Bradford M.C.C. will hold its annual open hill-climb at Baden Moor, near Easby, on Saturday, July 29th, commencing at 2 p.m. Nine classes are included in the programme, embracing every type of machine. An electrical timing apparatus will be used this year. Entry forms may be obtained from the sec., Albert Bldgs., Victoria Sq., Bradford.

Saturday's Open Hill-climb.

A big and representative entry has been received for Saturday's open hill-climb at Much Wenlock, organised by the Midland Centre of the Auto Cycle Union. Contestants will again race in pairs.

International Motor Cycle Races.

The international match at Brooklands next Saturday between C. R. Collier on a British Matchless-Jap machine, and Jake de Rosier, the American champion on an Indian machine, is creating great interest. Great keenness is being displayed by both riders, and a purse of £130 is being given in addition to other prizes, to the winner of two of the three races over five, ten, and twenty-five miles. In addition to these contests there will be a full racing programme by the British Motor Cycle Racing Club, while, weather permitting, there will be flying by the aviators engaged in the forthcoming £10,000 circuit of Great Britain.

Parties of motor cyclists are being arranged in different districts to travel to Brooklands for the Collier v. de Rosier match next Saturday. There is every promise of a big attendance, and the B.M.C.R.C. deserves all support for its enterprise.

The Barnet Shooting Case.

The mysterious outrage which occurred near Barnet, when S. Splitters, a motor cyclist, was attacked by a pedal cyclist named G. D. Hay, and dangerously wounded, was solved on Saturday last at the Old Bailey. Dr. Dyer, of Brixton Prison, described the case as unique, and in reading extracts from Hay's diary, said he had no doubt he was of unsound mind. The prisoner appears to have been conscious that he was suffering from a mental infirmity, and struggled against it. The jury returned a verdict of guilty but insane, and Hay was ordered to be detained during His Majesty's pleasure.

Essex M.C. Hill-climb at Bottledown. Councillor Leymann changing gear on his twin-cylinder N.S.U. and sidecar.

A Criticism of the New 2 h.p. Lady's Humber.

With a view to giving the new model 2 h.p. lightweight lady's Humber an exhaustive test, Mrs. M. C. Cooke, the well-known Triumph rider, has been riding the machine for some weeks, and has kindly written the brief criticism which appears below. The 2 h.p. lady's Humber will eventually be listed as a standard model.

IT is now some years since I had my first Humber featherweight push-cycle. I little thought then that some evening I should find waiting for me a Humber motor cycle, built on as graceful lines as those of its predecessor. It is said "Everything comes to him

the down tube, and are a marvel of neatness and compactness. The beautiful curve of the down tubes from the steering head to the seat-pillar gives the impression of great strength and gracefulness.

There is little need for me to describe the power unit, for it is exactly the same as used on the now well-known 2 h.p. men's lightweight. The cylinder, which is offset, has a bore and stroke of 60 by 70 mm.

Although single-geared, it is one of the easiest machines to handle, for several of my non-motoring friends (who had not been on a motor cycle before) have tried it, and the ease with which they mounted, started, and dismounted was quite a revelation.

The machine is most comfortable to ride, and runs very quietly and smoothly, while its ability to carry a lady almost anywhere at a speed well over the legal limit, if need be, or even at a walking pace, makes it a most accommodating and desirable acquisition. I understand that future machines will be fitted with the Armstrong three-speed gear.

All the parts are well protected, and there is no danger of getting a dress oily

on the engine. The dressguard on the back wheel is of cord, to which I rather object, as the cord so soon gets dirty and untidy looking. With a little arrangement, however, this can be dispensed with.

Several motor cycling friends are asking if I have joined "the light brigade," and my reply is "to a certain extent, yes," in that I have discarded the push cycle altogether in favour of the lightweight motor cycle. Nine out of every ten ladies who ride a pedal cycle would do the same if they once tried the easier and more modern motor.

On the other hand, those of us who scour the country, sometimes for days together, and whose husbands drive T.T. Triumphs, or other equally fast machines, have to be equally well balanced with them in respect of power for everybody's peace of mind.

In conclusion, may I say that Messrs. Humber, Ltd., are to be congratulated on the excellence of the design, the simplicity of the working parts, and also for their enterprise in thus catering for the ladies.

(Mrs.) M. C. COOKE.

Mrs. M. C. Cooke with the new model 2 h.p. lady's Humber.

who waits." At the Olympia Show last November I had a chat with the designer of the Humber products, and from what I gathered then I formed an idea of what the machine would be like. The first one has been made, and I am not disappointed, nor have I any doubts that when placed on the market it will be the lady's mount *par excellence*.

The model in question is fitted with a 2 h.p. engine, and weighs about 100 lbs. The engine and magneto are fitted under

Showing the neat design of the lady's Humber lightweight.

Essex M.C. Hill-climb.

On Saturday, the Essex Motor Club will hold a hill-climb at Upminster Common Hill (near Harold Wood), starting at 4 p.m. There are five classes on the programme.

Woolwich, Plumstead, and District M.C.

The competition for the President's Challenge Cup took place on the 9th inst., the winner being S. C. Davis (Kerry), 3½ marks lost; 2nd, J. Tassell (6 h.p. Matchless-Jap), 4½ marks lost; 3rd, C. Busbridge (4 h.p. Chater-Jap), 6½ marks lost. The special prize presented by Mr. J. Tassell for the best performance by a passenger machine was won by E. Philpot (5 h.p. M.O.B.M. and sidecar), 16½ marks lost.

British and American Times.

Some months ago when reports from America spoke glibly of speeds of ninety miles an hour on motor bicycles, and more than one competitor riding identical machines were unable to get within ten miles of such a speed at Brooklands, we suggested that probably it was "in the air." O. C. Godfrey, it will be remembered, pleaded that the rough state of the surface at Brooklands was the cause, and offered a wager that the member of our staff who wrote the paragraph could not exceed 76 m.p.h. at Brooklands, although his machine is capable of quite 80 m.p.h. Needless to add, the challenge was not accepted, but an animated discussion followed, a number of readers offering to accept the wager under certain condi-

tions. We are reminded of this amusing incident by a telegram signed "Indian Wells" which reads: "See *The Motor Cycle*, November 25th, it is not the air, it is the engine." Many thanks, Mr. Wells. English people were always sceptical. We are convinced.

Hill-climb on Mont Ventoux.

This famous Continental hill-climb will be held on August 5th and 6th, and a class for motor cycles has been instituted. The entry fee is £2 per machine, and application should be made to the secretary, 9, Place Crillon Avignon, France. The hill is approximately 13½ miles long. The steepest section, near the summit, averaging 1 in 7½ for five furlongs, provides a searching test, after climbing for nearly thirteen miles.

Mechanical Details of T.T. Models.

WE continue our description and illustrations of the special mechanical features of Tourist Trophy machines used in the Isle of Man.

As we have already indicated, practically all the T.T. machines were provided with a brake pedal, which, instead of being mounted on the footrests, and therefore standing a chance of being thrown out of action by a spill, was arranged quite separately. The old arrangement of carrying the brake pedal on the footrests was adhered to in the Matchless machines, but in order to prevent any damage a special stay was

Matchless girdered footrest, to prevent damage in case of a fall.

arranged, as shown in fig. 1. The same sketch also shows how the foot brake was applied through a rocker arm working on a pivot carried inside the pedal bracket of the frame.

New Model M.R.

The little 4 h.p. M.R., whose rider deserves very special mention for his remarkable corner work, was a new model full of good points. Perhaps the chief feature of interest was its lightness, weighing, as it did, only 110 lbs. ready for the race. Unlike the smaller twin Moto-Rêve, which has its valves arranged one above the other, the 4 h.p. engine has both valves in the head, where they are worked by adjustable rocker arms and tappet rods, as shown in fig. 2. The

Overhead valve gear on the new model 4 h.p. M.R. ridden by A. Berlie in the Senior Race.

attachment of the cylinder to the frame tube by means of the lug shown is most unusual, and we are inclined to doubt its advantages if the clip be held tightly, as there is no means of allowing for the expansion of the cylinders. However, it proved no disadvantage in the race itself, and the little engine kept buzzing along

M.R. trakes operating on both sides of the belt rim.

with most commendable regularity, and it was only belt troubles which prevented Albert Peirie from getting a higher place than twenty-fifth. The engine has a bore and stroke of 63×80 mm., and a total cubic capacity of 499 c.c., so that compared with other twins it was at a decided disadvantage. The arrangement of the hand and foot brakes is shown in fig. 3. Both of these are extremely large, and work upon the external and internal sides of the belt rim respectively. Both are applied by means of Bowden wire, the hand brake employing a bell crank lever which pushes forward a plunger

M.R. belt tensioning lever.

on the end of which is mounted the brake shoe. The drive is by means of a V belt, which passes over a jockey pulley, a free engine position being obtained by slackening the latter so that the belt slips over the engine pulley. The lever for this purpose is illustrated in fig. 4 and is provided with a very neat internal pawl which engages with the ratchet shown.

The new Alexon carburetter is shown in fig. 5. This is of the single jet type, with the main air inlet below the jet, and an additional inlet above. The throttle is of the plain butterfly type, and is contained in the short inlet pipe. It will be noticed that the main air is drawn through a series of holes drilled round the base of the jet chamber, and not as is the usual practice, through a semi-annular orifice around the base of the jet.

Features of the T.T. Scott.

We have already described some of the innovations on the 4 h.p. Scott which put

Alexon carburetter.

up such a remarkable performance in making the fastest lap. Figs. 6 and 7 illustrate the principal points. The first is an exterior view of the carburetter, and illustrates the control in which both air and throttle levers are worked from one side, and both are worked from the handle-bar. There are two separate jets, each of which has its own independent

The carburetter control mechanism on the T.T. Scott.

automatic air valve which abuts on the further side of the engine. It will be seen that for greater security the spring-on inlet pipe is held down to its seat by a small thumb nut. The illustration also shows the end plate of the rotary distributor, the arrangement of which is shown in more detail in fig. 7. It is contained in a casing cast on to the cylinders, and is driven by a light chain. We are not at liberty to explain the distributor in full detail, as we understand the patents are not yet completed, but the principal point is that its use allows a very rapid opening of the inlet ports. At all events it appears to work

The new distributing valve used for the first time on the T.T. Scotts.

extremely well, to judge by the manner in which the Scott negotiated the mountain. The lubrication of the distributor is effected very simply, as it draws in its own lubricant when the tap connecting its casing to the oil tank is opened.

A Long-distance Ride without a Toolbag.

Punctually at 9 a.m. on Monday last, W. Pratt, on a P. and M. motor bicycle, started on his long distance ride which he hopes to accomplish without the use of any tools. Punctures do not count. Mr. Martin Duncan observed on behalf of the Auto Cycle Union, and followed the rider in a car lent by the Kempshall Tyre Co.

At the time appointed for the start the weather was cool, but later the sun shone forth, and the remainder of the day was ideal for the purpose.

On Tuesday morning Pratt continued his ride *via* Watford, Aylesbury, Aynho, and Banbury, to Leamington, where a halt was made for lunch. The ride throughout was undertaken in a blazing sun, and there was no incident. The afternoon run was *via* Stratford, Oxford, and High Wycombe to Uxbridge.

On Wednesday, Tuesday's route was retraced to Enstone, where the left-hand road was taken for Broadway, Evesham, to Worcester for lunch.

AN ATTEMPT TO RIDE 1,000 MILES WITHOUT A TOOL.

W. Pratt ($3\frac{1}{2}$ h.p. two-speed P. and M.) who is this week attempting to cover 1,000 miles without a toolbag.

In the official car are Mr. M. G. Duncan, the A.C.U. official observer, and Mr. F. A. Hardy, the press representative.

The first day's route selected by the Royal Automobile Club was *via* Rickmansworth, Watford, St. Alban's, Hatfield, Hertford, Ware, Standon, Bishop's Stortford, Quendon, Newport, Great Chesterford, Cambridge, Huntingdon (where lunch was taken), Caxton, Godmanchester, Royston, Baldock, Stevenage, Welwyn, and Hatfield back to Uxbridge, the total distance being 155 miles.

Pratt found the road very dusty after the recent dry weather. A remarkable feature of the first day's ride was the regularity with which Pratt kept to scheduled time in spite of the fact that he carried no speedometer.

Lunch was taken at Huntingdon, which was reached at 1.15 p.m., and a stop for tea was made at Hatfield.

Several motor cyclists turned out on the route to give Pratt a cheer. Apart from this the ride was without incident, and the first day's run was accomplished without the aid of a tool of any description. The petrol consumption for the day's run of 155 miles was just under one and a half gallons. The P. and M. machine is fitted with Kempshall tyres.

Leaving the Chequers Hotel yard, Uxbridge, followed by the official car.

SIX DAYS' LIGHTWEIGHT RIDE.

The six days' lightweight record, held by H. V. Swift ($2\frac{3}{4}$ h.p. Douglas), who rode 2,025 miles, has, we understand, been beaten by James Merton ($2\frac{3}{4}$ h.p. M.R.), who rode 2,157 miles—132 more than the former total.

Merton started at three o'clock on Saturday, the 1st inst., and finished on Friday, the 7th inst., at three o'clock. The route was in the Eastern Counties, starting from London to King's Lynn, Yarmouth, Newmarket, Cambridge, etc. Merton, who finished in very good condition, had not previously ridden more than 200 miles in one day. The distance covered on the first day was 410 miles—an excellent performance.

Merton's M.R. was fitted with Simms magneto, Amac carburetter, Hutchinson tyres, Stanley Dermatine belt, Bluemel plugs, Cowey speedometer, F.R.S. lamp, Middlemore saddle, and a Clair silencer. The engine was lubricated with Wakefield oil, and Pratt's spirit was used.

BRISTOL CLUB'S RELIABILITY TRIAL.

The results of the Bristol B. and M.C. reliability trial held on the 8th inst. to Bath *via* Gloucester, Birdlip, Cirencester, Faringdon, and back through Faringdon, Cricklade, and Malmesbury, were:

	Points lost
1. Eli Clark ($2\frac{3}{4}$ Douglas)	2
2. E. Kickham ($3\frac{1}{2}$ Rudge)	3
3. { W. W. Douglas ($2\frac{3}{4}$ Douglas)	4
{ G. L. Fletcher ($2\frac{3}{4}$ Douglas)	4

On the outward journey the competitors had to ascend Birdlip Hill, a task everybody was able to accomplish.

C. R. COLLIER'S NEW RACER.

In his match with De Rosier at Brooklands next Saturday, C. R. Collier will use a new type 8 h.p. J.A.P. twin engine on his Matchless, with a bore and stroke of 90 by 77.5 mm. The speed capabilities of this machine are not yet known exactly, but are enormous.

An Irish Lady Motor Cyclist.

Mrs. K. G. Townsend, of Ballyshannon, gives her Experiences.

A few months ago had anyone told me that I should shortly be riding a motor cycle I should have jeered at him or her with scorn and derision.

Now, having become an enthusiast, I wonder how I possibly managed to do without one for so long.

My husband is a civil engineer, with a practice extending into six counties, and railways here being few and far between, he does practically all his work by motor cycle. I often wished to accompany him and explore the country, and did try once or twice on my ordinary bicycle, but found it too hard to keep up at even slowest speeds when pedalling by myself, and too dangerous to be towed along owing to the bad road surfaces.

It was after one of these attempts that he first suggested a ladies' motor cycle, and I was horrified at the idea of attempting to ride so complicated an animal.

However, after turning it over in my mind (the idea, I mean, not the motor) for a few weeks, I finally ventured to sit on my husband's machine in the hall while he started the engine, and showed me how to manipulate the levers. I soon learned how to do this and then longed to try it on the road. Having arrived at this stage, it did not take long to induce me to order a motor cycle for myself.

My First Experience.

This arrived in due course by passenger train, and after having unpacked it and filled up the tanks with petrol and oil, I started off within an hour of its arrival for a run with my husband. We did twenty miles straight off, and I returned home simply charmed with the machine. The sensation of sitting still on the saddle and being hauled up and down hills without having any pedalling to do was delightful, and the levers which looked so complicated were really very easy to manage.

The next day being a holiday (St. Patrick's Day), we started off for a whole day's run to Killybegs and back, 66 miles. Altogether, during the first week the machine was in my possession, I did 300 miles without any trouble and with only one puncture, caused by a sharp stone.

I am sure more ladies would take up the pastime, if only they knew how easy it is to learn to control the machine, and how cheap it is to run. A gallon of petrol, which costs one shilling and twopence, will carry one from 120 to 140 miles, and the wear and tear of the machine is very small.

The Machine for Ladies' Use.

I am much interested in the discussion going on in *The Motor Cycle* between Miss Berend and

others anent the suitability of a lightweight or heavyweight motor cycle for ladies to ride, and with all due respect to Miss Berend, who rides a $3\frac{1}{2}$ h.p. Brongh heavyweight, I think that for ordinary everyday riding, a 2 h.p. lightweight, if suitably geared, is the proper mount. My machine is the new 1911 2 h.p. Motosacoché, weighing (unladen) about 90 lbs. It is geared seven to one, and with this gear I can get up any hills about here (and it is a hilly country with abominable road surfaces) without pedalling at all, not even the L.P.A., so frequently jeered at by heavyweight enthusiasts, and I can comfortably average over fourteen miles an hour on long runs; and, after all, what more does a lady want?

The Wearing Qualities of Lightweight.

With regard to the oft repeated statement that

Mrs. K. G. Townsend on her Motosacoché.

lightweights lose power badly after having run about 500 miles, my husband's experience shows very much to the contrary. He rides a lightweight Motosacoché, and his present mount is the third one he has had of this make, and they have proved most satisfactory. He is out in all weathers and frequently does 120 to 140 miles in a day. He has never yet been left on the roadside by his machine, and he finds two or three thousand miles make no difference worth speaking about to the pulling powers of the engine; it is still full of life. His machine is also geared to seven to one, and he can comfortably average eighteen miles an hour, and very rarely has to pedal on hills. I think also a lightweight must be a great deal easier to manage in grease. I have no difficulty at all in keeping mine going over the greasy limestone roads of Donegal, and they are very greasy, and there is no comparison between the ease of pushing about a heavyweight and a lightweight. I have tried both.

The Clothing Question.

The question of suitable clothing for ladies when motor cycling is very simple. On long rides I usually wear a short thick skirt, a flannel blouse, and over all an overcoat, about three-quarter length, made of blanket cloth, and in case of being overtaken by rain I have a light waterproof coat strapped on to the carrier. For head covering I wear a tweed hat and motor veil.

The large shields which enclose the engine on my bicycle are most effective in protecting my dress from oil and grease. Altogether, I am very pleased with my venture, and am looking forward to long tours all over Ireland this summer.

CLUB NEWS

Cumberland County M.C.C. (Western Section)

The postponed reliability trial of the above club will take place on July 16th, starting from Piel Wyke.

Westmorland M.C.C.

Next Saturday, speed trials are to be held in Lowther Park, Penrith, by favour of the Right Hon. the Earl of Lonsdale. Good prizes are offered for the three classes, and the proceedings commence at 4.30 p.m. prompt.

Mansfield and District M.C.C.

Twenty-two members turned out for the club's second run on the 1st inst. to Matlock *via* Chesterfield and Baslow, and back by way of Ambergate and Alfreton. With a membership of thirty-three, the club promises to be a flourishing institution.

York County M.C.C.

Awards in the Leeds-London and back run held on 24th and 25th ult. were: Langton (Triumph), silver cup; Grinstead, gold medal, and Moorfoot (Rex and sidecar), silver medal. The two days' run to Edinburgh and back will be held on July 15th and 16th.

Inverness and District M.C.C.

The first hill-climb was held at the Leachkin, a prominent ridge on the west side of the canal nearly half a mile long with two steep pitches well within single figure gradient and a water splash which required to be crossed with circumspection. The formula used was $\frac{W}{G \cdot T}$, and the winners were declared as follows: 1. R. Milne (Triumph); 2. R. Campbell (Triumph); 3. Jas. Marr (B.S.A.) R. Campbell was first on time with P. Douglas (8 h.p. Bat) second.

Hull and East Riding A.C.C.

A very successful hill-climb was held on Saturday last at High Drenton Hill, South Cave. There were eight classes and a very good number of entrants. Messrs. Plewes (3½ h.p. Calthorpe), Slingsby (3½ h.p. Rudge), and Ellis (3½ h.p. B.S.A.) made very fast times. The results are not yet to hand, having still to be given out by the committee.

Oxford M.C.C.

Social runs will be held on July 13th and August Bank Holiday to Deddington and Howberry Park respectively. In the first instance the club will be entertained by a vice-president, Mr. G. Horatio Jones, and in the second by the president, Mr. Harvey DuCros.

Essex M.C.

For the annual members' hill-climb next Saturday, on Upminster Common Hill, competitors must be ready to weigh in at three o'clock.

The 200 miles non-stop competition, postponed from June 24th, has been changed to 100 miles, and will be run off on July 22nd. Further information can be obtained from Mr. E. Bass, Bishops Stortford.

Ayr and District M.C.

On July 5th a speed-judging competition without watches or speedometers was run off from Cocker's garage to a point near Mauchline and back. First prize was awarded to Geo. Cocker (5 h.p. Rex), who drew 16½ m.p.h. and arrived 1m. 5s. late. Second, Jas. Gilchrist (3½ h.p. Triumph), 11½ m.p.h., 1m. 10s. too soon. Third, W. Lawson (3½ h.p. Triumph), 18 m.p.h., 1m. 15s. too soon.

The Coronation hill-climb postponed to the 28th of June owing to the inclemency of the weather, was held at Brae Avenue, and took the form of a flexibility test, the awards being two heavy non-skid tyres presented by Messrs. The Kempshall Tyre Co., Ltd. Electrical timing with supplementary telephones was used, and the results on the formula

$$\frac{T \times D^2 \times N \times \sqrt{S}}{W} \quad \text{and} \quad \frac{S - F}{F + S} \quad \text{are as follows:}$$

SINGLE-CYLINDER CLASS.

	Fig. of Merit
1. Jas. Senior (3½ Rudge)6039
2. Mat Brown (3½ Rex)5499
3. Wm. Allan, jun. (3½ Triumph)5496

TWIN-CYLINDER CLASS.

1. Miss May Senior (2½ two-speed Douglas) .5141
2. Geo. Cocker (5 Rex)4795
3. Alf. Sommerville (5 Rex)4724

Miss Senior was privileged to use a reduction gearing (about 10 to 1), the rest of the members having to use a direct drive.

Club News.—

Measuring out the fuel allowance in the Edinburgh M.C.C. Petrol Consumption Test on Saturday last.

Mersey M.C.

The following riders won silver medals for non-stop runs in the 100 miles non-stop reliability trial held on the 9th inst.: F. C. Jones (Bradbury), V. S. Horsman (Bradbury), J. Morley (Triumph), S. W. Carty (N.S.U.), H. Kershaw (Douglas), S. W. Phillpot (Humber), and A. Mason (N.S.U.).

Purley and District M.C.C.

The result of the flexibility hill-climb, held last Saturday at Tilburstowe, was as under:

	Difference.
1. R. G. J. Charlesworth (3½ Zenith) ...	4m. 15s.
2. D. H. Ebbutt (3½ Precision) ...	3m. 56½s.
3. S. H. Routley (3½ Bradbury) ...	3m. 23s.

Zigzagging was allowed, and was largely responsible for Mr. Charlesworth's slow climb, although he had probably the lowest gear of any.

North-west London M.C.C.

The reliability trial for the Thomas challenge cup was held on the 1st inst., the course being through Guildford, Farnham, Basingstoke, Oxford, Buckingham, Cambridge, and Biggleswade, finishing at Jack Straw's Castle. Fifteen competitors started, of whom two retired—Williams (8 h.p. Chate-Lea and sidecar), engine trouble, and Printz (5 h.p. Bat). There was a very close finish, three competitors losing only one mark each; but F. A. Rose kept nearest to schedule time. Results:

1. F. A. Rose (Triumph), one mark lost, cup and gold medal; 2. G. H. Hollis (2½ h.p. Douglas), one mark lost, silver medal; 3. Hal Hill (5 h.p. Bat), one mark lost, silver medal; 4. Glynn Rowden (Triumph), two marks lost, silver medal.

Lincolnshire A.C. (Motor Cycle Section).

The hill-climb held on Walsby Hill last Saturday attracted an exceptional entry. The results were:

CLASS A. SINGLE-CYLINDERS.

	Position on time.	Position on formula.
W. J. S. Bament (3½ Rudge) ...	1	1
G. O. Brunwin Hales (3½ Triumph) ...	3	2
F. Richardson (3½ B.S.A.) ...	2	3

CLASS B. MULTI-CYLINDERS.

A. B. Gould (5 V.S.) ...	1	1
A. Sutcliffe (2½ Douglas) ...	3	2
W. Richardson (5 F.N.) ...	2	3

The formula used was $\frac{C \times T^{1.5}}{W}$

The prizes won during the present year will be presented at a social meeting to be held at Skegness on the 23rd inst.

Coventry and Warwickshire M.C.

The twelve hours run to Bath and back will take place next Saturday, starting from Station Hill, Coventry, at 7 a.m. There are over a score of entries. The awards are *The Motor Cycle* 50 guinea cup (to be held for one year) and a replica in silver presented by the Triumph Cycle Co., Ltd. Second, Humber gold medal; third, club gold medal; fourth, Rex silver cigarette case. The route is *via* Evesham, Cheltenham, Gloucester, Birdlip, Stroud, Nailsworth, and the total distance 200 miles.

Herts County A.C.

On August 5th-7th the successful precedent of last year will be repeated in a tour to the Lakes, combining with it a reliability competition for each of the six classes of entrants. Members desiring hotel accommodation at Kendal and Barnard Castle should at once communicate with the secretary, from whom full particulars of the route and conditions can be obtained.

Dublin and District M.C.C.

A series of speed trials was held on Saturday at Portmarnock, the three races resulting as follows:

One Mile Handicap.—1, C. Pardo Kird (3½ h.p. Triumph), 160 yards; 2, J. A. Carvill (3½ h.p. Triumph), 130 yards; 3, C. E. Murphy (3½ h.p. Triumph), 150 yards.

Four Miles Handicap.—1, P. Brady (3½ h.p. Rudge), 45s., time 5m. 32½s.; 2, J. Healy (3½ h.p. Rudge), 35s., 5m. 25s.; 3, C. E. Murphy (3½ h.p. Triumph), 35s., 5m. 28s. Won by 2s., there being 3s. between second and third.

Twenty Miles' Handicap.—1, P. Brady (3½ h.p. Rudge), 5m., time 28m. 11½s.; 2, J. A. Carvill (3½ h.p. Triumph), 4m., 27m. 26s.; 3, T. Green (4 h.p. Waverley), 4m. 27m. 43s.

Glasgow M.C.C.

The fast and slow hill-climb was held on Saturday last at Gaitshake, near Dumbarton. The results were:

CLASS I. Singles.

	Slow.	Fast.	Fig. of Merit.
J. S. Grant (3½ Triumph) ...	10.51	32	3.04
— Wilson (3½ Singer) ...	9.41	27.7	2.94
D. S. Baddeley (3½ Rudge) ...	8.57	24.83	2.89

CLASS II. Twins.

— Hunter (7 Indian) ...	8.83	53.5	3.79
W. Deans (3½ Singer) ...	10.29	32	3.11
D. S. Baddeley (3½ Rudge) ...	10.69	29.4	2.79

M.C.C. Brooklands Race Meeting.

E. Mariani (2½ h.p. P. & M.) finishing second in the club championship ever

Club News.—

Streatham and District M.C.C.

The hill-climb fixed for Saturday has been postponed till August 5th in consequence of the B.M.C.R.C. Collier v. de Rosier match at Brooklands.

Woolwich, Plumstead, and District M.C.

Club runs for the month are as follow: July 16th, to Ashdown Forest and Brighton; July 23rd, to Winchelsea-on-Sea; July 30th, to Pulborough.

Surrey M.C.C.

The petrol-economy competition on July 5th, over a triangular course of 16½ miles (Guildford, East Horsley, Ripley, Guildford), which had to be covered twice, resulted as below: 1, E. Cox (3½ h.p. Zenith-Gradua and sidecar), 91½ m.p.g.; 2, F. Smith (3½ h.p. Zenith-Gradua), 133 m.p.g.; 3, H. R. Owtram (3½ h.p. Triumph), 140½ m.p.g.

Wolverhampton M.C.C.

At a most enthusiastic meeting of local motor cyclists at the Victoria Hotel, Wolverhampton, on the 29th ult., the formation of this club was decided upon. Any who may be interested are invited to attend a general meeting at the same place on the 14th inst., when officials will be elected and rules submitted for confirmation.

Worcestershire M.C.C.

The "President's Cup" 150 miles reliability trial resulted as below, subject to confirmation by committee:

	Marks	lost.
1. F. G. Boddington (4½ h.p. two-speed Precision) ...	0	0
1. S. Lewis (5-6 h.p. two-speed Rex) ...	0	0
1. J. Dudley (2½ h.p. three-speed Hobart) ...	0	0
2. H. E. Bryant (3½ h.p. T.T. Triumph) ...	1½	1½
3. F. Smart (3½ h.p. T.T. Rudge) ...	2	2

North Staffordshire M.C.C.

The result of the hill-climb held at Sandon on the 25th ult. was:

	Fig. of Merit.
1. H. J. Scale (3½ T.T. Scale-Jap) ...	73.1
2. A. Cotterill (3½ Zenith-Gradua) ...	76.68
3. R. J. Ashton (3½ Scott) ...	79.46

Scale was awarded a gold medal, together with I. W. Bentley (8 Dot-Jap), who made fastest time.

Westmorland M.C.C.

Teams of six each are being selected by the Newcastle, Lancashire, Bradford, Cumberland, and Westmorland Motor Cycle Clubs to represent their respective counties in the hill-climb on the Greyhound, near Kendal, on August 5th. There are to be no conditions. Valuable medals are to be presented to the winning team, and further information may be obtained from C. B. Robinson, hon. secretary, Ferney Green, Kendal.

Putney and District M.C.C.

The results of the reliability trial to Salisbury and back on the 2nd inst., for a pair of Kempshall tyres, and a Haslam belt presented by the manufacturers, were as follows in order of merit: 1, P. R. Shackel (8 h.p. Matchless and sidecar); 2, M. G. Drew (3½ h.p. Triumph); 3, A. Verdon Roe (3½ h.p. Humber); 4, H. H. Buckmaster (3½ h.p. Triumph). There were eleven starters.

The Motor Cycling Club.

The 100 miles non-stop run was held on the 29th ult., over a very stiff course, starting at Hatfield, and thence through Hitchin, Barton, Sharpenhoe Hill, Aston Hill, Princes Risborough, Missenden, St. Albans, and back to Hatfield. As the route was entirely unmarked, the competitors who did not know the course were at a considerable disadvantage. Of the twenty-nine entries, twenty-four started, and the following gained medals:

Motor bicycles. P. H. Bentley (3½ h.p. Triumph), R. B. Clark (5 h.p. Indian), R. C. O. Wells (3½ h.p. Bradbury), J. P. Le Grand (5 h.p. Rex), A. G. Peppercorn (3½ h.p. Bradbury), H. Karslake (4 h.p. Dreadnought), G. T. Gray (3½ h.p. Rudge), H. E. Davison (5 h.p. Rex), W. F. Guiver (3½ h.p. Kerry-Abingdon), and C. C. Cooke (3½ h.p. Triumph). C. S. Lake (2½ h.p. Arno), had one stop, petrol tap automatically shut off.

Sidecars.—C. F. Halsall (5-6 h.p. Clyno), B. A. Hill (3½ h.p. Rudge), and C. Percival (6 h.p. Zenith-Gradua)

Western District M.C. (London).

The results on formula of the Dashwood hill-climb held on the 14th ult. have been worked out as follows: 1, A. C. Robbins (2 h.p. Humber); 2, W. Tyndale (3½ h.p. Triumph); 3, E. Kennedy (3½ h.p. Triumph).

Chesterfield and District M.C.C.

The awards on the A.C.U. formula in the Hardwick and Amber hill-climbs were:

Hardwick Hill.—1, Lawrence Smith (3 h.p. N.S.U.); 2, J. S. Wilcockson (3½ h.p. Bradbury).

Amber Hill.—1, W. Wood (3½ h.p. Triumph); 2, B. Cutts (3½ h.p. Bradbury).

The next hill-climb is on Stanage Hill on the 19th inst., the programme including a sidecar class and a flexibility climb. For entry forms, apply the hon. trials sec., J. J. Kelly, Olive Mount, Newbold Road, Chesterfield.

Leeds M.C.C.

Below are the results of the Leeds to London and back reliability trial, which took place on the 1st inst. Fourteen of twenty-four starters finished in schedule time:

GOLD MEDALS.—1, T. Bullus (P. and M.), lost 18 points, wins Langton Cup; 2, F. K. Langton (Triumph), lost 25 points; 3, R. Ellis (B.S.A.), lost 26 points; and 4, A. C. Gray (Rover), lost 59 points.

SILVER MEDALS.—T. H. Dunstan, Doncaster M.C.C. (Rudge), lost 76 points, and E. Goult, Doncaster M.C.C. (Triumph), lost 77 points.

BRONZE MEDALS.—S. J. Woolley (L.M.C.), lost 81 points; S. Crossley (Rover), lost 86 points; J. Mackay, Harrogate M.C.C. (Singer), lost 86 points; J. Davis, Harrogate M.C.C. (Triumph); J. McConnochie (Rex); and A. Lunn (Rover).

SIDECAR CLASS.—C. Foster (Rudge and sidecar), lost 77 points, wins Kelly Cup, and W. Grinstead (Rex and sidecar), lost 86 points.

This invitation run included teams from a number of clubs in the North, the winning club being the Doncaster M.C.C., two of its members being placed fifth and sixth.

Pocklington and District M.C.C.

There was a large gathering of the club's supporters and their friends at the hill-climb at Kilnwick Percy last Thursday. Two events comprised the programme—(1) for single cylinders of under 500 c.c. and (2) any machine, and in both of these Dr. Fairweather, on a 3½ h.p. Triumph, made the fastest time, being followed in each case by G. Whitworth on a 3½ h.p. Zenith-Gradua in the first and 2½ h.p. Enfield in the second. The final results remain to be worked out on formula.

Dr. Angus Fairweather, who made fastest time in two events of the Pocklington and District M.C.C. hill-climb. Dr. Fairweather also owns a Napier car.

SOME QUERIES FROM MANXLAND.

IS IT TRUE——

THAT the Indian came home with a beltful of scalps?
That a certain well-known artist ran over a hen?
Or that he had only burst a carrier cushion?

That the Manx tradesmen were sold out of big straps and large cushions by Thursday, June 29th?

That the fair visitors could tell you why this famine arose?

That to get a skirt in the belt rim is a finer brake than the best rim shoe?

That some of the riders devoted more attention to tuning themselves than their engines?

That champagne proved less helpful to these riders than carborundum to a valve seat?

That our visitors from the Dutch club were real sports?

That for once Bowen was able to turn within the radius of the coast line?

That therefore his engine trouble was real, hard luck?

That the Bashalls have restrained themselves wonderfully, and might win outright next year?

That the Colliers will use bigger tanks in future?

That Murphy is advertising for a reliable sparking plug?

That some motor cyclists' affections are quite as inflammable as petrol?

That in response to Collier's latest protest everybody who finished has been disqualified?

That some engines used enough oil to add five per cent. to Price's 1912 dividend?

That Brooker smiled visibly whenever he saw the oil-squirts squeezed into a lubricating tank?

That we don't think anything of Ballacrairie now?

That Sulby Bridge wants rebuilding?

That the mountain road was laid out by an intoxicated corkscrew manufacturer?

That if you have no free engine you should carry nothing tenderer than a spare belt on your carrier?

That the Armstrong hub is rather more reliable than a saddle?

That a certain twin engine (by no means last to finish) was built up during the night preceding the race?

That another competitor could rattle the "innards" of his engine about by grasping the engine pulley?

That the brothers Collier had the thirstiest and fastest J.A.P. engines ever made?

That thieves pilfered the toolbag of a competing machine whose rider had been taken to hospital?

G. L. Fletcher (2½ h.p. Douglas) negotiating the awkward turning at Quarter Bridge.

That Norton is a tough old sport, and has the Old Age Pension?

That John Gibson treated Sulby Bridge with great respect on his third, fourth, and fifth laps?

That Triumphs cannot overheat easily if they can career round the new course all day on a 4½ gear?

That de Rosier's kilometre at 75 m.p.h. on a wet and crooked track was marvellous?

That one of the Bat riders had a bad back wheel skid in the kilometre at 60 m.p.h., and kept upright?

That Humber shares were freely wired for on Friday night?

That a racing lightweight can bark like a 1,000 c.c. if you know how to tune it?

That Arthur Moorhouse is the finest amateur rider in the country.

That not one single-cylinder machine finished the Senior Race without an involuntary stop?

That in race week the lower deck of the Manx steamer looks like a marine stores?

That our bicycles must be pretty tough to survive such heartless treatment?

That for three men to carry a 7-9 h.p. Indian and sidecar over a 2ft. gangway and up seventy-three steps is worthy of Sandow?

THE KILOMETRE SPEED TRIALS ON THE DOUGLAS PROMENADE.

(1) Jake de Rosier, who accomplished the best speed—75.57 m.p.h.—in the kilometre race on the Douglas promenade, riding his famous 7 h.p. Indian brought specially from the States.

(2) H. A. Collier (Matchless-Jap) crossing the finishing line.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All queries should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately for ease of reference. Letters containing legal queries should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

A Loss of Power.

? I am in trouble with my 5 h.p. twin King motor cycle, about six years old, accumulator ignition. It ought to do about 45 m.p.h., but it does not seem to go any more than about 20. The valves are right, everything seems right; machine fires regularly, and yet no power. Why? I have just fitted a B. and B. carburetter, h.b. control, but no difference is apparent. Could the piston and cylinder heads be covered with carbon?—H.R.L.

We should say, first of all, that the lift of the inlet valves is slightly too large; also, probably the valve springs are too weak. You should also take off the cylinders and remove the carbon deposit. You might get far better results out of the machine if magneto ignition were fitted.

Excessive Carbon Deposit.

? I am having some trouble with carbon deposit. About two months ago I cleaned the top of my piston thoroughly, and now I find quite a quarter of an inch of carbon deposit upon it. (1.) Does over-oiling cause this? (2.) Would new piston rings improve or stop it? for I noticed when I moved the piston up and down oil began to appear on the top of the piston. It worked past the side of the piston head and the cylinder. (3.) How often should the carbon deposit be

removed from average machines? (4.) Is there anything I can apply to the piston to stop the accumulation?—S.W.H.

Not only over-oiling, but the exceedingly dusty nature of the roads would cause the excessive amount of carbon deposit. A very large percentage of this deposit is road dust. All you can do is to clean the cylinder, from time to time. Some engines will carbonise as quickly as every 1,000 miles. New piston rings might mitigate the trouble to some extent.

Overheating.

? The 3½ h.p. White and Poppe engine on my tricar is giving me some trouble. After running a few miles, the exhaust pipe and the part around the valve gets very hot, and when a small hill is encountered the engine stops altogether through overheating. I have had new inlet and exhaust valves put in, and there is splendid compression. The top of piston head and end of cylinder have been cleaned, and are quite free from carbon. After current is switched off, engine continues to fire for quite a time when heated up. It is a Longuemare carburetter, and it will not take very much air. Can you suggest a remedy?—W.R.J.

We should be inclined to think that the trouble is due to too weak an exhaust valve spring. Be careful also to use a

spark plug, the points of which do not project too far into the cylinder, and use only the best quality lubricating oil. Too weak a mixture is also quite as likely to cause overheating as too strong a mixture, and you might try a slightly smaller choke tube, also check lift of exhaust valve.

Timing Exhaust Valve, etc.

? I have a 2½ h.p. motor cycle, accumulator ignition, plain coil, automatic inlet valve, and should be obliged if you would kindly answer me the following questions: Please give directions for timing exhaust valve of above. Will one platinum on contact breaker work with, say, a Jehron point, or must they both be alike? Does it matter if the points separate more than ¼ in., as in the case of a magneto? When the points make contact a spark appears between them as well as at the plug. I suppose this will burn away the points? How can I cure this? Of what use is a detachable circuit plug? Will size 7-22 electric cable do to make all necessary connections with? If not, what kind must I use? When retiming the ignition, at what position must the spark lever be?—P.E.M.

Set the exhaust valve to close at the moment the piston is on the top of exhaust stroke. We should advise you to have both contact points on the contact

A private owner, J. R. Haswell (3½ h.p. Triumph), at the first bend at Ramsey, leading to the hairpin bend and mountain climb. Although the Triumph machines had single gears they climbed the mountain each time.

breaker of the same material. With regard to the adjustment of these points you should so adjust them that, while a firm contact is made, it should be no firmer than necessary, otherwise you will have slight loss of speed. The best way to adjust the points is to screw up the contact screw so that a good firm contact is made, start the engine running, unscrew until misfiring begins, turn the screw in the reverse direction half a turn, and then lock it. Yes; the spark will burn away the points. A small amount of sparking cannot be avoided. The condenser in the coil, if it is a good one, will keep down the spark at this point. You are evidently referring to the old type of switch plug inserted in the low tension circuit of a battery ignited engine. When this was withdrawn it prevented waste of current if contact points were touching. For wiring connections use ordinary low tension wire, obtainable from any motor dealer. When retiming battery ignition it is best to have the lever threequarters retarded, and piston on dead centre.

Obstructive Cattle Drivers.

? I shall be very grateful for any information as to the legal responsibility of owners of cattle whose drovers refuse to clear the road for motor traffic. I was recently held up by a herd of cattle, the driver of which absolutely refused to clear the road, and rudely stated that if we found cattle in the road we must stop. I was obliged to do so, and even then he kept his cattle in front of me, and I could not get through, as the cattle were doing the same way as myself. I had a sidecar and passenger and had the greatest difficulty in getting along. This happens constantly, and I want to know whether there is any redress.—(REV.) C.O.R.W.

Our legal adviser writes: "Your correspondent can apply to the police court having jurisdiction for the district in which the cattle were obstructing the road for a summons against the drover for wilfully obstructing the free passage of the highway. If the justices are satisfied that the drover was not using the highway in a reasonable manner, and that he was, in fact, wilfully obstructing other users of the road, they could inflict a fine not exceeding 40s."

Miss Butterfield, of Birmingham, on her 2½ h.p. 62x70 mm. two-stroke Levis. The machine weighs but 85lbs., the wheels measuring 24in. diam.

Liability for Damage.

? I was recently riding on a motor cycle about twelve miles per hour on the left-hand side of the road, when I saw a pedal cyclist coming out of a side street on the same side that I was travelling on. I steered across to the right hand side of the road, and the cyclist went the same way, and a collision resulted. The man was not hurt, nor was the machine knocked over on the ground, but still he says that the impact buckled his rim and knocked his frame out of alignment. He made a lot of bother, so I took the machine to a cycle repairer, and left it there to be put right. I paid the man the price he asked. A few days ago the man I collided with came to my home and said the machine was not right, so he took it to the firm he was

buying it from on the hire system, and they state that it wants a new rim and a new down tube, which will cost probably about £1. If I pay the owner, not the hirer for the job, shall I cease to be liable?—I have heard that the hirer is going to make me pay for loss of time in coming to see me about it. Can he do so?—W.A.

Our legal adviser writes: "'W.A.' seems to have given away any chance he had of successfully defending an action for damages, as he has practically admitted liability by already having had the machine repaired. If the cycle repairer he employed is a competent man, he could see him and enquire whether he considered the cycle was put in as good condition as it was before the accident, and whether a new rim and a new down tube were really necessary. If the first cycle repairer put everything right your correspondent is not liable for any further bill. He certainly ought not to pay the bill for the second repair without obtaining a receipt in full discharge of all liability, and, under the circumstances, it would be best to get this signed by the owner and the hirer. The hirer cannot make your correspondent pay for loss of time in coming over to see him about it."

READER'S REPLY.

Exhaust Whistle or Horn.

I read the query from Mr. P. Mac Cann re the Exhaust Whistle and your reply. I have a whistle which will blow even when I wheel the machine. The great efficiency of this whistle is obtained by having two valves (butterfly), one in the exhaust pipe and the other at the base of the whistle, so that when the one in the exhaust pipe is open the other is closed and *vice versa*. By just pressing a pedal a mellow note is heard; it works just as well when the exhaust valve is lifted, better in fact, because at every up-stroke there is a charge sent through the whistle which makes a practically continuous note.—R. NEVILLE.

EXPERIENCES WANTED.

"C.M." (Birkenhead). The Armstrong and Millennium hub gears.
"G.H.T." (Godalming). T.A.C. 7 h.p. Indian, and Scott for touring solus.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 14 words or less 1/6, and 1d. per word after. Each paragraph is charged separately. Name and address must be counted. In the case of Trade Advertisements a series of thirteen insertions is charged as twelve.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," Coventry, or London (20, Tudor Street, E.C.), by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should state distinctly under what heading and in what issue the announcement appeared.

CLASSIFICATION BY LOCALITY.

For the convenience of purchasers of second-hand motor cycles, the advertisements are classified into districts, as many readers like to know what machines are for sale in their immediate neighbourhood before going further afield.

Plan showing division of England into Sections.

SECTION I.
Northumberland, Cumberland, Durham, and Westmoreland.

SECTION II.
York and Lancashire.

SECTION III.
Carnarvon, Denbigh, Flint, Cheshire, Derby, Stafford, Shropshire, Macclesfield, and Merioneth.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, 2d. will be charged for registration, and three stamped and addressed envelopes must be sent for forwarding replies. Only the number will appear in the advertisement. Replies should be addressed, "No 000, c/o 'The Motor Cycle,' Coventry"; or it "London" is added to the address, then to the number given, c/o "The Motor Cycle," 20, Tudor Street, E.C.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but if not we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions exceeding £10 in value, a deposit fee of 2s. 6d. is charged, when under £10 the fee is 1s. All deposit matters are dealt with at Coventry, and cheques and money orders should be made payable to Hiffe and Sons Limited.

SPECIAL NOTE

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR BIKE

BACK REST

Price
7/6

ACCESSORIES

to meet a long-felt want.

CHEMICO MOTOR-BIKE BACK REST,

as the name implies, has been produced as an antidote to that continual strain that the back is subjected to during motor cycling. The use of this ingenious contrivance will reveal the vast amount of support and comfort it is possible to get from a back rest.

The CHEMICO MOTOR-BIKE BACK REST releases the rider at will, the mere leaning of the body forward being sufficient to detach. Attached or detached instantly. Not unsightly or cumbersome. Undoubtedly a boon to the distance rider.

Price - 7/6 each.

CHEMICO MOTOR-BIKE VALVE GRINDER,

12/6 each.

an ingenious tool for the attention to Motor Cycle Valves, has been designed to supersede the clumsy and bulky devices at present in vogue. Worked upon the ratchet principle, it is possible to work at ease upon the most awkward positioned valves. A cam arrangement enables this tool to be used with a right or left-hand motion at will.

A Booklet further describing these articles can be had free on application and post free.

2,000 MILES

—FOR—

TOTAL 6/6 COST

This is what is possible from a STANDARD "FLASH" TYPE

HELLESEN DRY BATTERY.

Numbers of riders obtain this mileage—you can do the same. Write us and we will give you every assistance.

C. Why pay more for Accumulators and have the additional worry and expense in continually charging them?

COILS

are the most efficient Coils on the market, for the simple reason that they are specially manufactured for use with Dry Batteries which necessitates a low current consumption to obtain the maximum mileage.

SIDECARS; largest stock; best value in England; all built of Chater-Lea fittings; prices, £6/10, £5/10, £4/15; second-hands from £3/15, fitted free while you wait.—O. A. Edgar, 123, Holloway Rd., N.

CHATER-LEA Sidecars and frames.—Don't be deceived by fraudulent advertisers trading from private houses, pawnbrokers' shops, etc., and offering inferior goods as genuine Chater-Lea. When in doubt write Golden Lane, London.

TOTTENHAM.—Sidecars, 1911, nicely upholstered, fit any machine, £3/10/6; quick detachable, £3/17/6; Millford Herald, £6/6; Mills-Putford quick detachable cane body, £11, in stock.—Stamford Hill Motor Co., 128, High Rd., Tottenham. Phone 1982.

THERE is no firm in existence besides ourselves that can build a sidecar throughout of genuine Chater-Lea fittings at £5 and reap a profit. Yet every part of an Oakleigh is guaranteed genuine Chater-Lea. All the profit we get is 10/- on each one. It is the enormous quantity that we build that enable us to do them at £5. Five years' guarantee.—Oakleigh Sidecars, Ltd., 65a, Rosedale Rd., West Dulwich.

PILOT Sidecars are unrivalled as high-class, easy and perfect fitting sidecars; superior in every detail; perfect in every part; we first introduced easy detachable clips, side entrance bodies, and every real improvement in sidecars for years; we manufacture, not assemble or factor them; numerous models from £4; gradual payments arranged; write postcard now.—Pilot Cycle Co., Soho Rd., Birmingham.

COMPARE This Specification with any other, and note the good value you get off me; double cee springs, wicker body, upholstered with cushion, cracked back axle, bringing the car wheel in line with cycle wheel, plated wheel, with 21 tyre, mudguard, quick detachable fittings, best cold drawn mild steel tubing; orders received before July 15th presented with sidecar apron free; complete, £5/5; immediate delivery.—Burgess, sidecar manufacturer, 59, Oldham Rd., Manchester.

The Six Days' Trials Route.

THE detailed description of the Six Days' Trials route which we publish in this issue comes from the pen of a motor cyclist who is intimately acquainted with the roads in the Yorkshire district, and it can, therefore, be accepted as an accurate survey. The article concludes by stating that in his own case the writer has found a 6 to 1 gear very useful at times in covering parts of the course, and this on a $3\frac{1}{2}$ h.p. standard machine. Reading between the lines, those who know what a $3\frac{1}{2}$ h.p. is capable of with such a low reduction will not need to be told that the trials course is very severe. It is hardly to be expected that riders of single-gear machines will attempt to cover the six days' routes with a fixed gear so low as this. They will, therefore, either do one of three things. First, use a higher ratio and trust to skill to aid them in climbing all hills; second, they will stop to adjust the engine pulley to suit the gradients; third, they will use a variable gear. Few will deny that the most suitable method and the one most likely to appeal to the average tourist rider is the variable gear, and the performances of the machines so fitted will be watched with the keenest interest.

There is no question of doubt about the severity of the trials this year, the only query being whether the routes are not a little too stiff. Every motor cycle used for touring purposes should be capable of climbing any hill met under ordinary touring conditions, and the A.C.U. is to be warmly commended for selecting an arduous and trying test, otherwise the machines could not be tested to the point of elimination. There is, however, the weather to be reckoned with, and if

we are unfortunate enough to have a very wet and windy week next month, it is possible that there will be a good many failures. We mention this not with a view to discouragement, but as a forewarning to our readers not to expect impossibilities if conditions are unfavourable.

Agents and Design.

THE comparisons made in an article published under the heading of "Tendency of Design" elsewhere in these pages anent the difference between British and American manufacturers' methods in the settlement of design are worthy of special attention from manufacturers. We should not like to go so far as our contributor and say that no British firms consult their agents, the word agent in this sense meaning the retailer, but we agree that many do not take them into their confidence as much as they might do. When the industry was new, comparatively few agents took any interest in either riding or the sale of machines, but they have all realised their error, and are now keenly enthusiastic. Enthusiasm is always helpful when it does not pass the bounds of prudence, and few, if any, manufacturers can fail to learn something from "the man on the spot." Several firms hold periodical meetings of travellers and agents and discuss future design, but few submit their new models to criticism before our annual public inspection at the Show. Yet how can a designer who restricts his attention to roads and touring conditions in his own district satisfactorily cater for, say, a motor cyclist in the North of Scotland. The man conversant with difficulties is the one most likely to overcome them. We commend the suggestion to those interested with the best of intentions

The Route for the Six Days' Trials.

Illustrations and Description of the 1,000 Miles Trial Course in Yorkshire.

The twisty hill over the moors between Fateley Bridge and Kirkby Malzeard. The surface of this rise is in a very loose condition, rendering dry skids a possibility.

IN a very few days the event next in importance to the T.T. races will be upon us, and although the T.T. races are generally of much educational value, equally so is the Six Days' Trial, but rather in a different direction. Therefore in this issue it may be of some use to run over the ground, not by means of the motor cycle as a power-propelled instructor, but by means of *The Motor Cycle* as a teacher. I also have pleasure in referring my readers to the double page map published in the issue of March 2nd.

The A.C.U. Committee, in choosing Yorkshire as a testing ground, could not have chosen a better centre than that famous inland watering place Harrogate, for the district abounds in good roads, splendid scenery, and numerous steep ascents, both straight and twisty, so that the completion of the 1,000 miles in six days will require a good and reliable machine combined with a competent and careful rider.

First Day, Monday, August 14th—177½ miles

Consideration of each day's runs in detail shows that the competitors will have on the first day—Monday, August 14th—to cover the same route as was used in the April Quarterly Trial—177½ miles—and it would be needless to cover this portion again, except the extra bit, namely, Thirsk to Helmsley, *via* Wass Bank, and Helmsley to Harrogate, which is easy except for Wass Bank. This is a long hill, terminating at the top with an exceedingly stiff ascent of about 300 yards in length and an awkward bend, with the surface often greasy. At the foot lies the pretty Abbey of Byland, and just past it there is a dangerous but short descent ending in a water-splash. The roads there are twisty, with one or two small ascents, but as far as Harrogate are generally to be found in splendid condition.

Second Day, Tuesday, August 15th—170½ miles.

The second day will be more exacting, and likely to cause some trouble unless I am very much mistaken. From Harrogate to Masham there are good roads with one or two minor ascents, but care should be taken at Ripon, as there is an exceedingly dangerous bend into the market place, where a sharp left turn must be taken at the "Clock Tower," and the road is then easy to follow up to Leyburn. Care must, however, be taken at Tanfield, with a turn to left, and at Masham, with one to the right, where there is a nasty ascent into the town. Past Middleham, where a glimpse of the

old castle may be obtained, we go into Leyburn, and, running right up to the "Town Hall," (?), turn to the right, and proceed as if to Richmond, up a rather stiff incline, and just before Halfpenny House turn to the left, and, further on, again to the left to Reeth, where follows a grand stretch of road until the ascent right up to Tan Hill is begun, a matter of about 1,200 feet rise, which may occasion a great deal of fun! The road goes from bad to worse, always ascending.

This road, although a main road, is a mixture of ploughed fields, unrolled stones, and moorland track, and for the A.C.U. to consider for one moment the question of having a hill-climb on it would be the height of folly; much rather had they better have a couple of hours' stop at Tan Hill Inn, and allow the competitors time to rest, refresh the inner man, and visit the proprietor's private coal mine situate within 100 yards of the inn. From this old mine the inn-keeper at present obtains his coal, and he will sell it at the rate of 6s. 8d. per ton, delivery at the pit head. Unless the proprietor is informed early of any intention to stop there, victuals will be very much at a premium. Leaving this famous hostelry, we run down to Barras over vile roads, and take a dangerous corner under a railway bridge, when the road begins to improve, and eventually becomes excellent, a nice run taking us to Appleby, whence we return and take the road to Kirkby Stephen and over undulating roads to Hardraw. A very satisfactory hill is met just after passing over the pretty bridge (which is narrow and must be taken carefully) of Thwaite House, and on to Redmire, after which we tackle a stiff hill, and part of the way up turn to the left under a railway bridge, and then keep straight on, away from the main road, and proceed up a narrow and bad by-road for Scarth Nick, where a hill-climb is supposed to take place. It is said locally that the repair of this hill is rendered impossible by the stones rolling to the bottom. The acclivity is about half a mile long, overhung with trees, and goes through a veritable quarry. Continuing over Leyburn Moor with a turn to the right, atrocious roads drop down into Leyburn, and so on to Harrogate.

Third Day, Wednesday, August 16th—189½ miles.

After the comfortable run to York, the route passes under the interesting Micklegate Bar, and straight on over Ouse Bridge, through the market place, and

The Route for the Six Days' Trial.—

turning to the right in front of the Old George Hotel brings one to another of the famous bars (Walmgate). Three miles further the left turn at the fork roads is taken to pretty Stamford, with its dangerously humped bridge, where one turns to left, then sharp to right, and then again to left. Soon the engines should be primed with oil for tackling Garrowby Hill, with its average gradient of 1 in 8 for nearly two miles.

Fourth Day, Thursday, August 17th—167½ miles.

Another day of sharp corners, possibly clouds of dust, and one brute of a hill. A gentle jaunt over easy and good roads to Ripon, *via* Acomb and Borough-bridge, then to Grantley Bank, which has to be carefully approached by a short sharp descent over a prettily situated bridge and up an incline beautifully overhung with trees, terminating at the top with a slight left hand bend for Pateley Bridge and Greenhow

A very bad corner leading to a steep but short hill after descending Kexgill Pass (fourth day).

From the top we have a delightful down gradient practically to Bridlington, which wet alone can spoil, the roads over the Wolds being made of limestone. From Bridlington is a nice run on undulating roads to Filey, whence there are two routes to Scarborough, one by the coast bringing the riders to the Valley Bridge (½d. toll), then past the station, where, especially in August, there is always a motley assemblage of tramcars, fish carts, waggonettes, and trippers. The other route is the better one, and comes into Scarborough, *via* Seamer, at the top of Falsgrave Road, where left and right turns are taken for the village of Scalby, which is approached by a very dangerous left hand turn. A few miles further on is Cloughton, where turn left at the signpost for Whitby, to avoid the now famous Stoupe Brow, and proceed along the new route up the ticklish little incline of Cloughton Bank and over a switch-back moor road to Whitby. Trouble will be experienced here to find the correct route, but once outside the town the road is very good past Ruswarp and Sleights, and there is a grand climb for over three miles up the famous Blue Bank, which is at present in a very loose condition. Once past Hell Corner (Saltergate Inn), competitors may rejoice, for the road home (*via* Pickering, Malton, and York) is comparatively easy.

Grantley Bank, between Ripon and Pateley Bridge (fourth day).
Dangerous corner at Thoralby (fourth day).

Another view of the same corner which takes the competitors to Otley.

Hill. This, rising nearly 1,000 feet in two miles, is certain to prove unsatisfactory to the unwary. The first portion is very stiff, and is followed by a sharp right corner, and then—on probably the stiffest portion of the hill—a sharp left turn; and competitors who safely negotiate this with plenty of power need have no fear about the rest of the hill, which is a gradual climb up to Greenhow village. A straight run now takes us to Grassington, over the River Wharfe to Airedale, and then Settle, with its peculiar little market place. The road to Hawes from here as far as Ribbles Head is bad, twisty, and narrow, rising nearly 600 feet; on the left hand may easily be seen the mountains Ingleborough and Wharfedale, and on the right Pen-y-Ghent. From Newby Head the road into Hawes is distinctly bad, but leaving Aysgarth there is a

good surface to Thoralby, a village both approached and left by dangerous and stiff descents requiring great caution. A mile or two further is Kidstones Pass, a very stiff climb, with the surface in a disgraceful condition, which the A.C.U. intend to use, among others, as a timed climb. I say without fear or favour that this hill is not a fair test against the watch, as engines will have to be very flexible and in good fettle to climb it at all. This stone-strewed track safely passed,

The Route for the Six Days' Trial.—

care must be taken for about two miles, as the road is one continuous run of wash-out channels, and after Buckden rather narrow lanes through Starbottom on to Kettlewell, where across the river is one of the most beautiful runs in the North, down Wharfedale, past Kilnsey Crag on the right, also Barden Towers, and Bolton Abbey on left. From Bolton Bridge there is a stiff ascent with plenty of corners, then a lovely run down Kexgill, locally called Blubberhouses Pass, delightfully Alpine in its character, and at its foot is a

Micklegate Bar, York, through which the competitors ride on the third and fifth days.

right hand corner up a very stiff but only short hill, which makes anything like speed an impossibility, and then to Otley. To avoid going right into the town, turn to left for Farnley, thence to Norwood Edge, which is a hill with a nasty left and a right hand turning at the bottom. The long climb which follows would prove a good alternative for the timed climb in place of Kidstones Pass, and if from its summit the route ran *via* what is known as the Rough Road and Birk Crag, another nice little hill would have to be surmounted, but I anticipate a run home *via* Skipton Road.

Fifth Day, Friday, August 18th—181½ miles.

The first part of this day's run, from Wetherby to Tadcaster, *via* Wighill and Newton Kyme, is not marked out quite satisfactorily on the maps already published. There is a by-road from Wetherby to Wighill and thence to Tadcaster, and from there to Harewood, *via* Newton Kyme Station (not village, which is away on the right on the banks of the River Wharfe), Boston Spa, and Collingham Bridge, where keep to the right over the river and railway bridge, and up a

long but easy gradient, passing through a fine avenue of trees and coming out directly in front of Harewood Park gates. Turning here to the right, proceed down Harewood Bank, which has a dangerous left hand turn, and continue straight along to Pool, and just through village turn to left and on to Otley, where a very dangerous right and left turn must be taken, the surface here being bad setts. Now a nice run to Ilkley follows, and a real good hill, viz., Keighley Gate, about two miles long, with one very tricky corner, but fairly good surface unless cut up by the dry summer. From Keighley Gate there is a drop down to Keighley into Airedale, through the town and traffic of Bingley, and up to Heaton, a suburb of Bradford, only to encounter a shockingly difficult hill through Heaton Woods. The surface is not of the very best, and with the gradient about 1 in 5 and a corner or two it will be no light work. Descending Hewenden Brow and along to Haworth some fun may be expected on a narrow, very stiff, and roughly-paved road, which is hemmed in by houses, and usually called the main street.

Crossing over Keighley Moor with what is known as Trawden Forest on the left, there is a bad road to Colne, which improves to Settle, *via* Gisburn, but for the occasional setts. Following the same route, but in a different direction from that of the fourth day, we come from Settle to Pateley Bridge, where proceed straight ahead up a hill with numerous corners and partly paved with setts. Passing the old ruined church on the right,

Approach to Grantley Bank, between Ripon and Pateley Bridge (fourth day).

Ripley, cross and stocks, with castle in background. First and second days of trial.

Looking down Greenhow Hill, near Pateley Bridge.

there is a rise of nearly 700 feet to Brownstay Ridge. Thence through Kirkby Malzeard, Grewelthorpe (famous for its splendid cream cheeses), and through very pretty country lanes to Masham, and thence to Thirsk, joining the same route as on the second day.

Sixth Day, Saturday, August 19th—122½ miles.

After the excitement of five days of severe hills, twisty roads, and bad corners, this day's run of approximately 120 miles over good and practically level roads should come as a welcome sedative. There may be extra traffic when passing through York, seeing that it

The Route for the Six Days' Trial.—

is market day, but a passage in the early morning should not be attended with much trouble. Two toll bridges have to be negotiated within a very few miles of one another, one at Selby, and the other at Bubwith.

During the whole of the Trial I should advise the competitors to refrain from "dusts-up" with other riders, for the roads are twisty and the corners in most cases very loose, especially on the moors. With

machines in good trim and the gears low, all the hills can be taken, but some of them, more especially Kidstones Pass, Arkengarthdale, and Searith Nick cannot be rushed. I have practically covered the whole of the course on a 3½ h.p. motor cycle, and found a 6 to 1 gear very useful at times. The Trial should be well supported, and, wet weather or fine, should prove useful and instructive to riders and manufacturers.

H. W. FORTUNE.

There are two roads between Kirkby Malzeard and Masham, one by the Watersplash, the other round by the church down a dangerous little hill. Photograph shows the Watersplash.

The worst corner on Greenhow Hill, near Pateley Bridge.

Showing the shocking state of the surface of Arkengarthdale Hill, leading up to Tan Hill Inn.

Kidstones Pass, which has to be negotiated on the fourth day.

OFFICIAL AWARDS IN THE T.T. RACES.

The following is a complete official list of awards in the Junior and Senior T.T. Races issued by the A.C.U.

The Junior Race.

1. P. J. Evans (2½ h.p. Humber), £30 and gold medal.
2. H. A. Collier (2 h.p. Matchless), £20 and gold medal.
- *3. H. J. Cox (2½ h.p. Forward), £10 and gold medal.
4. D. Brown (2½ h.p. Humber), gold medal.
5. H. Greaves (2½ h.p. Enfield), gold medal.
6. K. Gassert (2½ h.p. N.S.U.), gold medal.
7. W. W. Douglas (2½ h.p. Douglas), gold medal.
8. A. G. Fenn (2½ h.p. Humber), gold medal.
- *9. F. P. Johnson (2½ h.p. Humber), private owner's cup and gold medal.
10. J. Haslam (2½ h.p. Zenith), gold medal.
11. P. Weatherill (2½ h.p. Zenith), gold medal.
12. G. L. Fletcher (2½ h.p. Douglas), gold medal.
13. H. G. Dixon (2½ h.p. New Hudson), gold medal.
14. S. Wright (2½ h.p. Humber), gold medal.

The Senior Race.

1. O. C. Godfrey (3½ h.p. Indian), £40 and gold medal.
2. C. B. Franklin (3½ h.p. Indian), £25 and gold medal.
- *3. A. J. Moorhouse (3½ h.p. Indian), £10 and gold medal.

4. H. A. Collier (4 h.p. Matchless), gold medal.
5. Hugh Mason (4 h.p. Matchless), gold medal.
- *6. J. A. Carvill (3½ h.p. Triumph), first private owner's cup and gold medal.
- *7. W. H. Bashall (4 h.p. Bat), second private owner's cup and gold medal.
- *8. Quentin Smith (3½ h.p. Triumph), gold medal.
- *9. H. Lister Cooper (3½ h.p. Triumph), gold medal.
- *10. J. T. Bashall (4 h.p. Bat), gold medal.
11. H. Reed (4 h.p. Dot), gold medal.
12. W. F. Newsome (3½ h.p. Triumph), gold medal.

* Private owners.

When the list of awards was announced on the 15th inst., the silver cup presented by the Dunlop Co. for the first private owner was awarded to J. A. Carvill. A. J. Moorhouse, another private owner, who was in the first three, has lodged a protest, which the Competitions Committee have ignored, and has now put the matter in his solicitor's hands. Moorhouse claims that as the presentation of this cup was announced on the official programme distributed in the island to be given to the first private owner in each race this announcement is binding on the A.C.U., whereas that body maintains that the conditions binding them are those on the forms signed by the competitors.

WHEN future historians write about motor cycle happenings during the first decade of the twentieth century, they will have to set down the statement that, broadly speaking, design remained stagnant throughout the whole ten years. We have been annually persuaded that the then current models embodied the last possibilities in design, construction, and material, and little consideration is required to prove how afraid were the majority of designers to strike out on fresh lines of investigation, the majority preferring a follow-the-leader policy.

Looking back over past occurrences, the thought arises that too many of those responsible for the settling of patterns and models were not practical riders. More's the pity, because departure from conservative ideas typical of the average British manufacturer in any sort of business would have permitted consultation with and advice from men qualified to judge the likelihood of future demand.

English versus American Methods.

In this connection, we can well copy United States factory methods, and boldly invite assistance from people directly in touch with potential purchasers.

It is the agent almost solely who is able exactly to gauge requirements for twelve months ahead and who can keep his mind free from prejudice. To our American friends must be accorded the credit for thoroughly appreciating the advantages of co-operative advice, and for many years it has been customary over there to invite the leading agents from every quarter of the big country to a conference at a factory, just prior to the final settlement of designs for the next year. At these meetings, rough models of the proposed patterns are produced for inspection and free criticism, whilst every man present is invited to say frankly whether the proposed ideas will help sales in any or all districts.

In British factories, the invariable aim of all concerned is to keep everything secret about new year's models until a few days before the annual show in London, for fear a competitor may steal ideas. This policy defeats its own end, whilst prohibiting the calling together in council of the very men who daily learn about defects in parts and yet rarely secure opportunity for passing their knowledge on to the factory, other than by letter. The perfunctory couple of hours' ramble through a factory, that seems to be the only general means of honouring agents in England, could easily be extended into a couple of days at little extra expense to the organisers of such affairs, and the eventual benefit to all concerned is hardly measurable in £ s. d.

Going back only two years, attention of designers was, at so recent a period, mainly directed to develop-

ing the single-cylinder engine, and but for the far-seeing efforts of the Competitions Committee of the Auto Cycle Union we might to-day be witnessing the evolution of single-cylinder monsters up to 8 h.p. The restrictions of this type to the now generally accepted 500 c.c. capacity—the popular $3\frac{1}{2}$ h.p.—is wholly due to the limitations placed by the governing body of the sport on the T.T. classes in 1909 and 1910, and, despite all that critics state to the contrary, such limit has compelled designers to revise a multitude of details.

So far as the writer is aware, no brake horse-power tests of 500 c.c. single-cylinder engines have ever been published, consequently true comparison of merit is out of the question. Yet judging by racing results at Brooklands, leading open hill-climbs, and practical touring experiences over long distances confirm the general opinion that the 1911 engine develops about 1 h.p. more than the same size built early in 1909. The features contributing to this desirable end are many, but among them may be mentioned increased valve diameters, more direct exit of waste gas from the exhaust chests, better and thinner cylinder castings thanks to magnetos in the case of twin-cylinder engines), and more particularly overlapping of the inlet and exhaust valve timings.

The Effects of Valve Timing.

The enormous difference in power developed by comparatively slight variations in opening and closing the valves is well understood by most designers. Theoretically, the exhaust should close dead on the top of the stroke to prevent blow-back with entry of fresh charge, but experiments conducted on a four-cylinder car engine at an American University prove that if the exhaust opening is continued some degrees beyond the top of the stroke, concurrently with fresh gas coming in, a scavenging effect is secured which materially helps towards a maximum possible quantity ready for explosion at the firing moment.

On this important matter of valve timing, each chief designer seems to have his own formula, and although it does appear feasible for engines having different valve areas and lifts to need cam profiles suited for each, it can be definitely asserted that these items are almost negligible, provided the opening and closing moments are deduced from careful experiments on the test bench. Quite naturally, makers who have carried out such tests for themselves are not willing to publish the result, but were it possible to collate the figures, they would be astonishingly correlate.

Possibilities Controlling Future Design.

The long-derided two-stroke engine has at last come to the front, thanks to the persistent belief in this

Tendency of Design.—

principle being placed on practical competition basis by Mr. Scott. Mention of this machine brings us naturally to consideration of the possibilities likely to control future design as a result of the 1911 T.T. Races. Frank Philipp on a Scott in the Senior Race made the star performances of the day in respect to time, for not only did he obtain the honour of the fastest lap during the third round in 41m. 52s., but he also made second fastest time of the day in the next round, doing 45m. 11s.

Taking the rest of the machines that finished, the twin-cylinders proved themselves immeasurably superior, the first six men (C. R. Collier's disqualification can be ignored here) all having engine capacity close up to the limit imposed by the regulations, the three Indians being 584 c.c. and the three Matchless 580 c.c. J. A. Carvill, Quentin Smith, and Lister Cooper were the first single-cylinders in that order, W. H. Bashall (Bat) coming in between them and spoiling the continuity of their results. They were all on similar machines—Triumphs 499 c.c. The winner's time on a twin-cylinder was 3h. 56m. 10s., and the best single-cylinder performance was 4h. 16m. 49s., a difference of 20m. 39s., exactly 4m. $7\frac{2}{5}$ s. per lap. Now Godfrey's speed throughout averaged 47½ m.p.h., whilst Carvill's was practically 43½ m.p.h.

We thus arrive at the very interesting fact that the 584 c.c. twin is four miles per hour faster over the T.T. course than the 499 c.c. single-cylinder.

Should Twin-cylinders be Handicapped?

These figures are indisputable, and finally dispose of the arguments put forward by scientific experts who have contended so fiercely on the alleged superiority of the single. When the conditions of the 1909 race were being formulated, the twins were given fifty per cent. greater capacity on the wrong assumption that the added friction of the extra cylinder piston, valves, etc., and the admittedly larger fuel and oil requirements (needing bigger weight carried to cover the same distance) would handicap the machine to an equality at the finish. Twin-cylinders romped home by the proverbial "streets," and the runaway win was repeated in 1910, when the twin capacity was reduced to 670 c.c.

It is all very well to bring forward scientific formulæ when devising race rules for road work, but the writer of these notes has contended in the past, and finds no reason to alter his opinion, that the only sound and reasonable method for bringing together different types—whether they be engines, gears, or complete machines—is to depend solely upon recorded times.

It is none too early to discuss 1912 T.T. arrangements, for, despite unfounded rumours to the contrary, it can be taken for granted that the Isle of Man authorities, manufacturers, riders, and the Auto Cycle Union desire the races to be continued. The Irish brigade and the majority of well-known private riders are as keen as ever, and always provided the entry fees are not raised beyond the existing sum, will race until they become grey-headed.

Coming to the essence of the subject—some means of bringing twins and singles together at the finish—we need not worry about petrol consumption or other obsolete ideas. The "standard" single-cylinder of 500 c.c. capacity is here to stay, and its power is

more than ample for all solo uses, and we can place that figure as the basis for considering twin dimensions. Supposing the twins are reduced to 540 c.c., they would still be two miles per hour faster than the singles, and anyone who cares to work out the figures of the Senior 1911 race will discover that the twin of 500 c.c. capacity is just about equal to the single of the same cubic capacity.

Overboard therefore goes the handicapping theory, and next year's tussle will have to be fought out on the single limitation applying to all alike, ignoring the number of cylinders or cycle of operations.

A Big Future for the Variable Gear.

If any machine of unusual construction can win, why so much the better for the objects the A.C.U. has never lost sight of in organising the T.T. Races, viz., development of design and attainment of perfect reliability.

Another feature that must govern future design was the almost universal use of change-speed gears in both races, and the fact that the five leaders' mounts in the Senior Race and the first sixteen in the Junior were so fitted. If the race had emphasised nothing else, it would have been worth while going to all the trouble involved in organisation by settling once and for all time the merits of some form of hand-operated gearing.

A feature of this year's race was that all the J.A.P. engines in the Senior Race were absolutely free from oil on the exterior. Would there were many more engines in respect of which one could say the same!

We are no nearer a solution of the chain *versus* belt problem than we were two years ago, and theorists must now cease to claim that a short stroke engine with big bore is infinitely better than the converse.

What of the future? To my mind the design of the future will be twin-cylinders at 90° angle, outside flywheel, two-speed gear, chain drive throughout and completely enclosed from dust or mud, universal handle-bar control, including clutch, magneto and oil pump, and automatic or semi-automatic lubrication.

V.H.

Master T. Thompson, the youngest motor cyclist in Portsmouth, who has just completed 1,000 miles on his 2½ h.p. Douglas.

OCCASIONAL COMMENTS.

By "IXION."

Infinitely Variable Gears v. Arbitrary Ratios.

We now have several more or less infinitely variable gears on the market, and it is becoming a burning question whether the evolution of variable gears is to proceed along the gradual lines of a power curve, or whether two, three, or four step ratios, separated by marked gaps, are preferable. The case for each type is easily stated.

The gradual gear is in theory more suited to solo work; it is capable of more even speed, it is less severe on the engine, and it enables the rider to use a gear which is at all moments adapted to the work in hand, instead of one which is much too high or much too low. The fact that such gears have been barred in several hill-climbs indicates their efficiency.

On the other hand, all such gears increase the strain on the belt, and especially upon the fastener, which is the weakest point of every good belt; and further, manufacturing considerations limit their lowest ratio to a figure which cannot cope with every conceivable emergency.

Step gears of the two or three-speed variety, on the other hand, show a distinct inferiority in respect of efficiency; but they need not strain either belt or fastener unduly, they lend themselves more readily to the incorporation of a practical free engine clutch, and they set no limits to the bottom ratio.

On the whole, the gradual type of gear would seem to be superior for solo work, and would commend itself to the maker of a machine not intended to be regularly used for passenger work; whereas a step gear should be nearly as suitable for solo work, and considerably better adapted to passenger work, because of its sparing the belt, because of its free engine possibilities, and because of its low bottom ratio.

Patching v. Vulcanising.

My remarks of June 22nd regarding the above heading have brought me several letters from the vendors of patent patches. I merely retailed an actual experience with a certain make of patch which I have found absolutely reliable and satisfactory as a puncture repairer. I stated that on overhauling a kit of old tubes, and soaking off the patches, I found that the holes beneath the patches had expanded, and the rubber surrounding them had chafed. That such a process is inevitable is surely obvious. No patch fills up a hole. There are two ways of filling up a hole; one is to use some of the hour glass shaped plugs of rubber marketed by certain specialists; the other is to weld a caulking plug of rubber into the orifice by means of vulcanisation.

I am perfectly willing to admit that patching is quite satisfactory for prolonged periods. My own experience tells me that a puncture repaired by a modern patch, properly affixed, will give no trouble for at least one season. But if there are any riders who, like myself, carry a stock of mended tubes over from season to season, my experience is of interest. The internal air pressure of an inflated tube concentrates at the weakest point. At the point where a puncture has existed, the even contour of the rubber walls is interrupted. The patch affords extra armouring. But round the locality of a puncture there exists

lines of rending force, radiating from the original punctured hole.

The state of my old tubes shows that *in time*, especially on fast heavy machines, these lines of force are strong enough to enlarge the hole, and weaken the rubber both of the patch itself and of the tube surfaces surrounding the hole. Hence I infer that when old tubes, used on fast mounts, are carried over from year to year, vulcanisation appears to be advisable.

Two makers have sent me supplies of their patches, and asked me to make a comparative test. I am grateful for their courtesy, but it is evident that I can make no report within a twelvemonth. I must wait for the punctures to come, work the repaired tubes hard, and after the period indicated, soak off the patches, and see what has happened beneath them.

None of my correspondents touch upon a point that should lend some support to their arguments, viz., that not every vulcaniser can be trusted to use his machine properly. Vulcanised patches are not always accurately "cooked."

Conduct in the Isle of Man.

I think "Sunlight" [letter No. 5737] takes rather a jaundiced view of what happened on Douglas promenade during the Manx Week. Last year a few riders were undoubtedly guilty of most disgusting and ungentlemanly conduct, especially in a certain skating rink, but I fail to see that any but the most strait-laced and puritanical critic could take exception on ground of public decency to the carrier riding which was seen along the front this year.

The "immodest women" who, according to "Sunlight," "let all decency fly" were in most instances quite young girls from the Lancashire cotton mills enjoying what struck them as a tremendous lark in all innocence. I admit the practice can be deprecated from the standpoint of danger, as many of the machines were driven rather recklessly at considerable speeds, but there was no other obvious reason for the police interference which "Sunlight" appears to have desired.

An objectionable element is, of course, usually present when a crowd of high spirited young men are collected together, and this year's race was no exception. A number of motor cyclists were requested to leave a certain hotel in which they had taken rooms, the police were called into another house, and certain competitors were so intoxicated during a part of the practice that the heads of their firms seriously contemplated withdrawing an entry or two.

Personally, I thought the average standard of conduct in the Isle of Man was as high as could be expected, and that the objectionable element who lose no opportunity of bringing discredit upon us were kept in the background as far as possible. Certainly there is no fear of our being unwelcome at Douglas should we seek permission to hold another race.

I should, however, like to see the A.C.U. exercise discretion in the selection of competitors and cancel the entries of riders who are known to have been frequently intoxicated during practice. There should be no difficulty in making it an invitation race, when known undesirables could easily be excluded.

Colonial Motor Cycle Competitions.

J. D. Elliott (202), W. Millar (365), riders of 3 1/2 h.p. L.M.C.'s who have lately distinguished themselves in Australian hill-climbing competitions.

A. G. Ogilvie (3 1/2 Triumph) making fastest time, and also winning the Tasmanian M.C.C. Hill-climb. He beat twins of 7-9 h.p.

THIS week's mail has brought us news of a number of motor cycle contests in Overseas Dominions, although at the time the letters were despatched the motor cycle season was on the wane in the countries mentioned.

N.S.W. Hill-climb.

The New South Wales Motor Cycle Club held an open hill-climb on the Baden Hill, at Coogee, on May 20th. The contest was run off in pairs, the final being won by J. D. Elliott (3 1/2 h.p. L.M.C.), handicap 4s., time 31s., from W. Millar (3 1/2 h.p. L.M.C.), handicap 1s., time 30s. The last-mentioned competitor, in defeating E. A. Rigg (3 1/2 h.p. Triumph) in the second round, created a new record for the hill—29s., length 1/3 of a mile.

Sydney Club's Flexibility Test.

There were twenty-three competitors in the Sydney M.C.C. flexibility

hill-climb. Fastest time was made by T. W. Green (8 h.p. Matchless), but he failed in the slow ascent. The winner proved to be R. Robinson, riding a 2 1/4 h.p. F.N. His fast time was 74 1/5s., slow trial 3m. 15 1/5s.

A hill-climb by the same club was won by H. I. Clements (8 h.p. J.A.P.), F. Cooper (3 1/2 h.p. L.M.C.) being second.

Tasmanian Hill-climb.

The Tasmanian M.C.C. held a hill-climb at Hobart early last month, on a 1 in 6 gradient. A. G. Ogilvie (3 1/2 h.p. Triumph) made fastest time.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All queries should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately for ease of reference. Letters containing legal queries should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Carburettor Slides Jammed.

Q. I should be greatly obliged if you can tell me the cause of my gas piston in carburettor sticking frequently on a long run, when engine gets hot. I may say that I have rubbed it down with fine emery-cloth several times. The trouble does not occur riding about town. Can you account for this?—W.C.P.

The trouble is simply caused by dust jamming the slides in the carburettor. If you rub a little graphite on these it will probably prove effective. If not, they should be still further eased. Naturally, when you ride in a town this does not happen owing to the absence of dust.

Royston-Ware Police Trap.

Q. On the Royston-Ware Road I fell into a police trap, that is to say, I heard a whistle go, and about sixty yards further on came across a policeman with a watch in his hand. Hearing the whistle I naturally slowed down, but no one asked me to stop. Can the police take proceedings, as nothing was said to me at the time?—M.T.

The legal position is this: Proceedings may be taken, although nothing was said at the time. Under the Act warning of the intended prosecution is to be given at the time, or notice must be sent within such time afterwards not exceeding twenty-one days, as the Court may think reasonable.

No Spark.

Q. Could you explain why I cannot get any spark from my plug? I have tried all new wire connections, new coils, new plugs, and I have taken precaution to see that there is no shorting anywhere. The accumulator is fully charged. I can get a good spark from contact, but none from the plug.—PUZZLED.

Are you perfectly certain that the wiring is connected up in the right manner, because it seems from the list you give that there must be absolutely nothing else which would cause the trouble. If you will remember to put the + wire of the accumulator to the + wire of the coil, the negative wire of the accumulator to the frame of the machine, the high tension wire of the coil (generally marked H.T. or B.) to the plug, and the remaining wire (marked C. or V.) to the contact maker, with the new coil, etc., it would seem impossible not to obtain a spark.

Liability of Road Surveyors.

Q. I am sending for your inspection a sample of granite chippings which have been spread indiscriminately on a fairly hard surface and left for the traffic to work them in. Once riding over them I managed to get three of them through my back tyre, and I should suppose other motor cyclists have had a similar experience. Is there no legal remedy against such acts as this on part of road surveyors?—H.A.U.

In regard to the above, our legal adviser writes: I have perused "H.A.U.'s" letter and cannot recommend him to commence an action unless he is prepared to go to considerable expense. The amount claimed would not be large, and in fighting an action of this sort there would have to be expensive witnesses, such as surveyors and experts on each side. In addition to this, he should obtain the services of one of the best solicitors in the district, as the case would have to be

very carefully handled, as legal points would arise. The point is that there is a duty cast upon a local authority to use due care to prevent danger to the public being caused by the mode of executing any authorised work on the highway. If your correspondent can satisfy the court that the material used in the repair of the road was either unsuitable for the purpose, or that it was left there for an unreasonable length of time without being properly rolled in, then there should be a *prima facie* case against the local authority. The defence might be that your correspondent himself was guilty of contributory negligence by riding a motor cycle over a road which had only just been repaired. The nearest case which I can find similar to the one suggested by "H.A.U." is one decided in 1905, brought by a Mr. Holloway against the Birmingham Corporation. There, the tar which underlay the surface of stone setts oozed up between them and caused the plaintiff's horse to slip. Mr. Holloway did not succeed in his action, as in this case it appeared that the road had originally been made up in a satisfactory way. Had Mr. Holloway proved that the road had been repaired improperly, it looks as if he would have succeeded.

A Sluggish Starter.

Q. My 7 h.p. twin V engine, with spray carburettor and high-tension magneto ignition, will not start under any conditions. The magneto seems all right when tested by putting the spanner on the terminals: it sparks, but sometimes the spark is larger than at other times. The magneto is timed to fire when the front piston is on the top of the compression stroke, points just about to break with lever fully two-thirds retarded. The compression is fairly good, as the wheel will skid before it will take the pistons over the compression. I have been trying to get it to fire on one cylinder, but cannot get an explosion. Please advise.—T.T.

From the symptoms that you give, we should imagine that your trouble is entirely due to a stoppage in the carburettor jet. Also, it would be better to advance the magneto a little further than you state, in order to facilitate starting. This is done by fully retarding lever when timing. We think the best plan would be to take the carburettor entirely to pieces, and to make absolutely sure that every part of it is functioning properly.

Norman Gray and his 3 1/2 h.p. Triumph on which he has been remarkably successful in competitions this year. Gray has already won eight medals in hill-climbs, and is one of the mainstays of the Cambridge University M.C.C.

Regular Running at Slow Speeds.

? I have a 1911 2½ h.p. Douglas, and find that when running on a weak mixture the rear cylinder fails to fire, but on cutting off the extra air it commences to fire. The trouble is that in order to get both cylinders to fire one has to use a mixture of such strength as to make travelling on the level too fast. Spark and valves seem correct. Can you account for this?—A.A.U.

It is usually necessary to close the air lever entirely when running slowly, and close the throttle almost to the full limit. As long as the machine pulls well without a great quantity of extra air you would do well not to attempt to alter the existing adjustment. Using the brake slightly is one way of slowing a machine in traffic, with the engine still firing regularly.

Misfiring at Slow Speed.

? I have a free engine machine and am troubled with misfiring when running at slowest speeds with clutch out or when going down hill with air and throttle opened as little as possible. (Increasing the air has only the effect of stopping the engine.) As soon as the engine has any work to do, such as going up an incline, or when the clutch takes up the drive, misfiring ceases without any further manipulation of levers. This trouble is of no great consequence, but drive and explosions are intermittent, and something apparently is not normal. Plug, carburetter, and magneto, are all perfectly clean. Can you account for this?—H.A.R.F.

We think if you were to make absolutely sure that the extra air slide closes completely, the misfiring effect you complain of would cease. It is possible that you could get all-round better results if you were slightly to enlarge the jet.

Inlet Valve Opening.

? I have a 1910 torpedo Fafnir 4½ h.p., and have been trying to make it more efficient. The exhaust and inlet valves are actuated by the one wheel, the exhaust closes on top of the stroke, and the inlet starts to open a quarter of an inch down the stroke, and does not close until the piston has gone half an inch upon the compression stroke. What is your opinion as to when the inlet valve should close? I have fitted footboards, and my machine weighs 194 lbs. in touring trim, and my weight is 10½ stones. With what gear would you say I could climb 1 in 8: also what should the petrol consumption be?—D.A.D.N.

The best opening for the inlet valve is to allow the cam to lift the valve when the piston has just commenced the return stroke, and to close a little after the commencement of the compression stroke. In this way you allow for any lag of the mixture, while the somewhat late opening allows a certain amount of suction in the cylinder before the lifting of the valve. The exhaust valve should, of course, close on the top of the exhaust stroke. The nearer you can get to this setting the better the engine will run. With the weights you specify, and the engine pulling well, a gear of approximately 4½ to 1 should enable you to climb

1 in 8 The petrol consumption ought to be somewhere in the neighbourhood of ninety miles to the gallon depending entirely on what amount of jet opening is used on the machine, and the level of the spirit in the jet.

Sooty Carburetter Springs.

? I am having lots of trouble with my carburetter. The springs controlling the air and petrol valves get rusty and sooty and 'stick' up, and I cure the trouble by washing springs in paraffin and coating with vaseline, but 100 miles sees the trouble again. Rust is, probably, due to damp sea air which rusts everything here. But why soot? Is there a blow back through overhead inlet valve not closing rapidly enough. All appears in good order, but there is at least ¼ in. of play between end of adjusting valve rod and rocking lever that shuts the valve. I am afraid to close up this play lest I make it too tight and break something. Soot only on springs, nowhere else on or in carburetter. Machine would climb a precipice.—W.F. (Shetland).

We think you will find that the trouble will cease if the springs are quite thoroughly cleaned and wiped occasionally with an oily rag. If the conditions are such that wet air is additionally likely to rust the springs, we should advise you to communicate with the manufacturers, and obtain from them a special spring for your conditions. The sooting is caused by the extreme clearance between the end of the tappet rod and the inlet valve operating arm. The actual clearance between these two should be 1.64 in. instead of ¼ in. If you adjust it in accordance with the above you will find that the sooting will immediately cease.

Starting with Sidecar.

? I bought a 1909 8-10 h.p. machine, intending to use it with sidecar. It was fitted with Mabon clutch and starting handle (single-speed), which is incompatible with the sidecar on the near side. (1.) Is there any serious objection to the car being fixed upon the off side? (2.) What is the slowest speed I could throttle the machine down to with passenger? (3.) In the event of the sidecar being fixed on the near side, could I start the machine by having the back mudguard fitted with a hinge, and pulling the back wheel up over compression?—J.G.

(1.) There is no serious objection to the sidecar being fixed on the off side, except that the passenger is the first person to see round an obstruction. There are many who can only ride with the sidecar on this particular side of the machine, and you will find that, if care is used, it is perfectly satisfactory. (2.) The slowest speed you can obtain depends entirely on what gear you are employing and exactly what state the carburetter is in. It ought to be quite easy to drive at ten m.p.h., or even slower, without operating the clutch. (3.) You can certainly start the machine by pulling up the back wheel, provided a hinged mudguard be fitted, and also that you take care to have the plug gap as small as possible.

EXPERIENCES WANTED.

"G.E.T." (Leeds). A. C. Sociable and P.M.C. Motorette.

"T.T." (Kuntstford). General criticism 2½ h.p. Lewis two stroke.

"Mid 947" (Birmingham). Carrying a passenger on carrier of 1911 Scott.

"H.T." (Leicester). P.M. gear fitted to 6 and 8 h.p. Bat-Jap and sidecar.

"S.H.B." (Devon). N.S.U. two-speed gear fitted to a Bradbury.

C. Northway and W. M. Erskine and their Bat-Jap machines on Deviturai Estate, Ambalangoda. In sending the photograph Mr. Northway mentions that these machines have been ridden over all kinds of roads, including those flooded with water.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and should be accompanied by the writer's full name and address.

Causes of Fire.

[5740].—We should like to relate a very curious incident which actually happened on the 12th inst. in our Cheapside premises. A magnifying reading glass, exhibited in the window, so intensified the sun's rays that it set fire to a rubber cycle tube, and had it not been observed at the time of ignition, the probability is that the whole of our premises would have been involved. JOHN PIGGOTT, LTD.

Conduct in the Isle of Man.

[5741].—I fully endorse the remarks of "Sunlight" in your last issue. The conduct of some of the motor cyclists who visited the island was positively disgraceful. To ride up and down the crowded promenade at speeds ranging from twenty-five to forty or more miles per hour is a sure way of closing the door to the many privileges we are allowed when visiting the island. Particularly conspicuous were two youths on a $3\frac{1}{2}$ h.p., whose sole amusement was to career along the front at the highest speed possible, scattering the crowds of visitors right and left. On one occasion I saw them four times in the space of thirty minutes. I believe the police eventually had to take action, and they were twice reported. I sincerely trust they will be prosecuted and punished in a manner fitting to those whose conduct brings odium to the whole body of respectable motor cyclists. MODERATION.

Sidecar Starting Handle.

[5742].—Whilst enjoying my copy of *The Motor Cycle* of May 25th, which is the current issue here, I came across an article, "A Run Round some London Factories," and in a paragraph on Bat progress you describe their new starting handle on the outside of the sidecar.

Now I own a 6 h.p. Bat-Jap and sidecar, and some months ago, finding I was unable to use the starting handle with

A Side view of bracket to fit sidecar frame.
B End views of brackets. C Sidecar frame tube.
D Tubular portion of starting handle, $\frac{1}{2}$ in. diameter.
E Oil holes. F P. & M. clutch.
H $\frac{1}{2}$ in. steam socket screwed to tube and pinned.

sidecar attached, on account of front stay of sidecar being in the way, I fixed up an extension spindle to outside of sidecar almost identical with the one described in your article. Enclosed you will find a sketch of the arrangement, which can be made up very cheaply, and may prove useful to other riders of a similar combination. C. H. STAHL.

Johannesburg.

Magneto Handle-bar Control and Stolen Machines

[5743].—I have often wondered why more makers do not fit handle-bar controlled ignition to their machines. It seems to me so much more convenient. There are many cases when one does not want to take one's hand off the handle-bars—on greasy roads and twisty hills, for instance. What is the actual advantage of the tank control? With regard to the "thief question," surely "prevention is better than cure" in the long run. Unless one knows the intending purchaser, he should not be allowed to try the machine himself or should be made to pay a deposit before he does so. For machines left alone, I suggest a special switch in the form of a lock, of which only the owner of the machine has the key.

BL 765.

A Rara Avis in Lytham.

[5744].—Last Saturday I rode into Lytham from Southport, and, judging by the enclosed newspaper cutting, the people of Lytham are rather behind the times. I have ridden a motor cycle for the last four years, and, notwithstanding various little drawbacks, such as adjusting a slipping belt, etc., watched by an admiring crowd, I think a motor cycle the jolliest thing a lady can possess. I never feel at all fatigued after a long ride, and have experienced no difficulty in looking after the machine, doing small repairs, etc. I hope some other lady motor cyclist will visit Lytham and complete the shock! (Miss) W. E. BROWNE.

WHAT NEXT?

Women will not be outdone. Surely there is no holding them down. On Saturday afternoon a female sped along the main streets of Lytham on a motor cycle! It looked for all the world like the ordinary bicycle: the engine and apparatus were almost invisible, but the "teuff-teuff" of the engine was plainly audible.

Unofficial Long Distance Runs.

[5745].—In reply to Mr. H. G. Bell, I have to say that I do not think it necessary that such runs should be always under the supervision of any one body, as that is inconvenient and sometimes impossible.

In my opinion these long distance runs are very convincing, and help the public in choosing the best machines.

Your correspondent is evidently in ignorance of what a long distance ride means, and I presume that when he goes on a long ride he will not have his machine touched or made into a new one as he put it, but perhaps he will be glad to have a friend to take his machine from him at the end of the first day's run, not to mention the remaining five days. Is there any sense in expecting a machine to go six days, of twenty hours per day, without fitting new valve springs or other small adjustments, and to suggest that a cycle engine can be generally overhauled and made into a practically new machine in less than three hours clearly proves there is not much wrong with it.

I respectfully remind the writer that what his friend told him may not be the whole truth, and that it is not very manly to write letters on hearsay which may be to the detriment of good sport.

I know that some people are always troubled with the success of others, but I, as a sporting cyclist, very much admire the performances of the very few long distance riders—good health to Catt and others. A RIDER.

Dutch Motor Cyclists' Visit.

[5746.]—I am very glad to inform you that all the members of the Dutch M.C.C. arrived well and safe at Amsterdam. We all enjoyed our trip very much, and shall certainly return next year for the T.T. Races.

We wish to thank *The Motor Cycle* for giving us such a nice route, the A.C.U., the Mersey M.C.C., and the directors of the Enfield Cycle Co., Ltd., for the cordial way in which they received and entertained us. Further, our thanks are due to Messrs. Wallis and Wilson, of Cambridge; to Mr. Percy S. Clews, of Tunstall; and to all the members of different clubs, who received us everywhere in the most cordial way, so that we shall never forget our first official visit to England.

A. CITROEN.

Explosive Puncture Sealers.

[5747.]—I see that an individual, who signs himself "Chemist" (Why?) has written to "Ixiom" to say that the puncture sealer I informed him about is a high explosive. If chloro-glycerine was formed by reaction between the glycerine and HCl, being unstable, it would probably react to form the very stable products, silica and sodium chloride. So much for the theory.

As for practice, I have heated up the mixture in a naked flame till red hot. The stuff did not even burn, much less explode. I know of no explosives which would do this.

As for explosion on impact, I have endeavoured to explode the mixture between hammer and anvil with no result. I can therefore reassure those readers who may have already injected some of the mixture into their tyres that it is not the simplest method of suicide.

PRAXIS.

The Coast Ride

[5748.]—Mr. Fred Dover has singled out the North-west of Scotland for special treatment in his account to you of his famous ride, and although we must regard Mr. Dover as a first-class humorist, some of his remarks seem to be taken somewhat seriously by you, and call for a reply from that benighted quarter.

But in the first place kindly allow me to state that the one hill which Mr. Dover failed to climb is not unrideable. He, no doubt, refers to Appagill Hill, near Tongue, Sutherlandshire, which he failed to surmount after sixteen or eighteen attempts, and was ultimately towed up by a donkey.

The road surface of this hill certainly presents a formidable obstacle to any machine which is incapable of climbing a severe gradient at a slow pace, as the rider has to pick his way through the loose gravel very carefully. However, given a suitable variably geared machine the ascent of the hill is quite a simple matter.

I started motor cycling ten months ago, and on my maiden trip I surmounted Appagill without any difficulty. Since then I have ridden over it regularly—often three times weekly—even when the hill was covered with snow.

Occasionally, I have had to dismount on the steepest portions to tighten a slipping belt, but never otherwise. That operation on my 3½ h.p. Zenith-Gradua, with the sliding back wheel, is a delightfully simple matter, and there is no difficulty in restarting on any gradient (start the machine downhill—put on free engine, turn machine round, and gradually engage the gear).

Fred Dover's account of his vicissitudes between Ullapool and Wick would be enough to scare away the existing generation of motor tourists, and incidentally deprive them of an acquaintance with that most romantic and interesting of Highland districts—the Reay country.

I am afraid, however, that in his troubled sojourn Mr. Dover has been unduly touched with the "romance." His tales have afforded us as much amusement as has his association with the donkey, but while he was treating your editorial ears to these stories of funeral processions, frightened natives, ostrich-like horses, etc., he, no doubt, was vigorously winking the other eye. It would be quite wrong for him to convey an impression that he is a pioneer in the remote Highlands, and, probably, he is surprised to find that *The Motor Cycle* finds its way to the village in which I reside, forty miles from a railway station, but had his famous trip been made even several years ago he might have met in these parts local "barbarians" mounted on Minervas, Excelsiors, and chain-driver Centaurs. My Zenith takes me on official duty, into every inhabited corner

in an area of 1,200 square miles, comprising the North-west corner of Scotland, and, far from being scared, the natives have always shown a most intelligent interest in the mechanism of my mount.

"The inhabitants have no idea of expedition as we know it." Oh, Mr. Editor! Does not *The Motor Cycle* circulate there? Has Fred Dover taught the potential motorists of the North-west or Scotland how the modern motor cycle can climb hills? Rather, has he not succeeded in demonstrating to them the utility of a donkey to the pastime? Happy thought, perhaps those runaway beasts of burden which hid their heads in the hedges knew something.

Now, Mr. Dover, don't be afraid again to venture into the North-west of Scotland, make Tongue a stopping place, and I will promise you a jolly evening, and with six yards of rope I will see you safely over Appagill in the morning.

Tongue, N.B.

P.L.

Sidecars and Change-speed Gears.

[5749.]—I must really reply to some of the keen sidecarists who replied to 5676 ("Never Again"), a letter I wrote.

5698 and 5719.—A two-speed Humber with a light sidecar and all superfluous weight kept down may not fail in districts where the roads are fairly level and the surface not too bad, but, in spite of the certain wonderful achievements quoted, cannot and should not, undertake long journeys in very hilly districts of 100 to 150 miles in a day with two up, or even one up and an empty sidecar. I had a 6 h.p. twin 1911 model, which had to be driven carefully in the teeth of a strong wind with the sidecar empty. But these light combinations are wonderful makeshifts.

5699.—Mr. Thomas does not state his gear, but I think he once admitted that it took six days, working eighteen hours per day, to take it off. Having been hard at work with gears (?) for three years, I should, perhaps, be less keen on the job than I used to be. And is he not one of the "push off up 1 in 6 with 650 pounds up" brigade?

5700 has evidently done well, but the Indian is sent out with no means of starting except by the old way, and no handle-bar control to the clutch.

5700.—I admit they are very fast and as reliable as most, but I have a prejudice. The gear itself has the glory of being the only gear box, except Chater-Lea, to resist a really powerful engine.

5701.—The Armstrong gear will perhaps solve the difficulty. Although it did well on small twins on the T.T. course, there is some difference in passenger work.

5718.—I can heartily sympathise with you. I was unfortunate to own the same machine as you evidently have. But, cheer up, you have still lots more trouble to find.

5717 has been very lucky, in spite of the laborious work and care bestowed on engine. If he can get up 1 in 4 with two up, or even with sidecar empty, on decent surface he has evidently done very well.

NEVER AGAIN.

Transport of Machines to the Isle of Man.

[5750.]—I should like to give my experience when visiting the Isle of Man, particularly regarding the transport of machines on the Isle of Man Steam Packet Co.'s boats. No provision or help is given in getting machines on board, or in stowing them when they are there.

On arrival at Fleetwood with a heavy 8 h.p. twin and sidecar I found a narrow gangway leading to the upper deck which was twenty feet above the quayside. There was no gangway to the lower deck, which was almost level. On enquiry I was told I had to get my sidecar aboard myself, the company's hands refusing to touch it.

The sidecar was detached, and with outside help was carried to the upper deck, and we were then promptly told to carry it down below. After protests it was got down. Then came the machine, which weighs 300 lbs. This also reached the upper deck, and we found a corner out of everyone's way into which it was stowed. In the meantime several other motor cyclists had arrived, some with and some without sidecars. On seeing this the captain came and insisted on my taking my machine down to the lower deck, stating as the reason that others would want to put their machines on the upper deck. I pointed out that if a gangway was put to the lower deck from the shore the others

could wheel their machines aboard without having to carry them up and then down again, but this was not done.

The other arrivals and I had a consultation, and we then approached the railway company, who own the dock, and got one of the large cranes at work, for which, of course, they had to pay. Though we had return tickets we preferred to forfeit them and travel back *via* Heysham. By this route the treatment was the exact reverse. We were assisted aboard at Douglas. All the help we needed (in fact there was no necessity personally to touch the machines) was cheerfully given in stowing and lashing them, and then they were carefully covered and could not possibly get damp or wet. These operations were done under the supervision of one of the chief officers. At Heysham, on arrival of the *Manxman*, the machines are lifted ashore by electric cranes complete without detaching sidecar, and a petrol store is close by where fuel is supplied by the Midland Railway Company.

On the return journey fifteen out of the twenty-two motor cyclists with machines aboard stated they had forfeited their return tickets rather than go back the other way, so I presume I was no more unfortunate than many others.

SIDECARIST.

Foreign Machines and English Riders.

[5751].—We have read with interest the last issue of *The Motor Cycle*, both literally and between the lines, and we have come to the conclusion that the fact of an American machine being so successful in the recent Tourist Trophy Race has been exceedingly painful to your editorial staff. It really is quite a pity that anything but a British-made machine should win this event; in fact, it really is not fair that any other country than England should exist in this large world, and if you are ready to start a crusade to oust all American stuff, let us know and we will be with you. It really is not right that all these British firms should be using American typewriting machines, it is not right that the biggest cycle and motor factories in the Midlands should be so fully equipped with American and German machinery. Nor is it right that British papers should utilise the wonderful inventions of the Germans and Americans to aid them in getting out quick copy.

I am sure that Godfrey, Franklin, and Moorhouse were most unloyal when they essayed to ride any other than a British machine. They have all got plenty of money, and there was no reason in the world why they should ride a machine which would bring them in the £ s. d. I feel sure they would have been perfectly satisfied had they ridden British machines and been amongst the "also rans."

What a pity it is that so many firms in the Midlands use German magnetos on their "all-British" machines. Why not get after them hot and heavy? Try and convince them that any old magneto will do as long as it is British. The same applies to tyres, and we certainly expect that next week you will get after the Humber Co. good and strong for daring to let any of their riders use a tyre which is not "all-British" make.

Keep up the good work. You will undoubtedly have our small contribution weekly for advertising space, and all this helps in the crusade. Let us reverse the socialist cry of "Britain for the British," and let us have "British for the Britons."

We cannot help but note with interest the winding up of your editorial article, and we hope to have the pleasure before long of hoeing a long furrow to your complete disgust. What we have done with twins we can do with singles. Just make a memorandum of this, as we may have to remind you of it a little later on.

THE HENDEE MANUFACTURING CO.
W. H. WELLS.

[So far as the first part of our correspondent's letter is concerned it deals with a letter written by Mr. A. C. Davison, and we must leave him to reply. Touching the last paragraph, this refers to our leading article last week, and we should like to point out that we made no sort of comment which could be translated into a feeling of disgust should the Americans do as well with the single-cylinder engine as they have done with the twin. We should like to ask our correspondent if he has forgotten the prominence given in our columns to his victory? We know of no other country in which a foreign victory would be thus impartially dealt with. We can mention this with good grace, as we do not parade it as a virtue but merely mention it as a characteristic.—En.]

CLIMBING THE WREKIN.

SEATED on the top of Shropshire's little mountain within a few hours of the close of the Midland Centre A.C.U. Hill-climb, we were one of a party who were discussing the events of the competition, when the sound of a well-tuned engine was heard, apparently in the valley below. Second thoughts, however, convinced us that the sound could hardly travel so far, and the motor cycle must be actually coming up the hill path. It proved to be I. B. Hart Davies on the warpath with his T.T. Triumph, and when he unconcernedly dismounted on the spot where the beacon fire recently informed the surrounding country that our King was crowned he told us that Howard Smith and Rupert May (two more enthusiastic Triumph riders) were not far behind. Those of our readers who have walked up the Wrekin on a hot day will know what it means to ride up on a motor bicycle. First there is a hairpin bend of the most atrocious description and a stiff climb over a loose surface to the halfway house; then follows a stretch of very slippery grass for some distance, followed by a rock-strewn path, culminating in a narrow gorge, where boulders protrude in all directions. Then there is an easy bit for a few yards across the grass track and another narrow path and more boulders.

The first climb was accomplished with a 5 to 1 gear by dismounting at the worst places and running alongside. Howard Smith adopted a different plan. He stopped about five times in all, and each time he went back a few yards and charged the obstruction like an American snow plough, and finally reached the top after a nasty fall. Those who know Rupert May's c.c. and resultant avoirdupois will not be surprised that he did not get beyond the halfway house, but that is a feat in itself.

Hart Davies was not satisfied with his performance, and after lunch he asked us to witness another attempt and to place witnesses at all the difficult points. The gear was reduced to 6½ to 1, and after two failures at the first of the two narrow gorges referred to he actually made a clean ascent of the hill. For the final attempt paper marks were used

to define the course to be taken to miss the boulders. Without this aid it is almost impossible to avoid striking them—in fact, Howard Smith had a nasty fall in the morning through hitting one at speed. When it is considered that he had no clutch or pedals, and that he weighs 14 stones 5 lbs., the feat is a surprising one, and, although others will doubtless emulate this hardy rider's performance, Hart Davies is the first to go clean up the Wrekin without a stop. We have the names and addresses of all witnesses at the important points.

Manchester Motor Club Hill-climb at Heyden Bridge. Weighing and inspecting the competitors' machines.

COVENTRY TO BATH AND BACK.

Twelve Hour Trial for Coventry Club Championship.

THE club championship event of the Coventry and Warwickshire Motor Club was held last Saturday, and took the form of a twelve hours' reliability trial to Bath and back—a distance of approximately 200 miles. A start was made at 7.0 a.m., Mr. A. J. Urry acting as timekeeper, and Messrs. J. V. Pugh, H. W. Staner, and V. A. Holroyd chief marshals. Competitors were despatched at half-minute intervals, and journeyed *via* Kenilworth, Warwick, Stratford-on-Avon, Bidford, Evesham, Tewkesbury, Cheltenham, Birdlip Hill (non-stop section), Stroud, Nailsworth, Crosshands, Cold Ashton, Bath. The rules stipulated that competitors should average twenty miles per hour throughout, and timed route cards were made out accordingly. H. Williamson (Rex), W. W. Douglas (2½ h.p. Douglas), and Roy W. Walker (New Hudson) did not start. At Cheltenham, Mr. P. Williams had arranged for the ubiquitous boy scouts to direct the riders through the town.

The first check was at Birdlip Hill, and up to this point the competitors ran most consistently, but this famous Cotswold acclivity proved a serious stumbling block, and rendered the task of finding a winner much easier. Mr. P. Currall and others observed the competitors at this point. B. S. Gorton (3½ h.p. Rex) was geared too highly and stopped, but the reason given by T. C. Pearson (3½ h.p. Triumph) for his stop in the middle of the hill, viz., that he imagined he was at the top, was, to say the least, distinctly humorous. E. A. Gorton (7 h.p. Rex) complained that he was impeded by another motor cyclist, and undoubtedly made the fastest ascent at the second attempt. Other failures due to over-gearing were: D. Elson (Triumph), G. Van Vestrant (3½ h.p. Rover), J. H. Pountney (3½ h.p. Rover), J. R. Haswell (3½ h.p. Triumph), and E. A. Isherwood (Triumph).

A timed check had been arranged at the hill summit, but the official car—a 15 h.p. Singer, kindly lent by Mr. J. D. Blakemore—bearing the timekeeper, was delayed by tyre troubles.

The next section to Bath, over extremely dusty roads, proved the most trying, but all arrived close to time at the Wallace Garage, Bath, where Mr. H. W. Duret was in charge. Here T. C. Pearson and C. S. Burney arrived exactly on time. Troubles were few, and the trial was voted most enjoyable. G. Van Vestrant arrived 14m. late owing to a puncture, and retired.

The Return Journey.

After an excellent lunch at the Royal York House Hotel, one and a half hours being allowed, a move was made for home. A. L. Ommoney found a puncture in his tyre, and was late starting. The first timed check was at the summit of Birdlip, and it was interesting to observe the keen manner in which the contest was being fought out. Watch in hand,

a competitor would wait outside the control, counting the seconds as they passed. J. R. Haswell and G. Smith were nearest at his point with but 3s. error. C. S. Burney, who had not lost a second to Bath, had apparently made a miscalculation, for he was 7m. 15s. slow, after whiling away the precious time almost within sight of the check.

A halt of 30m. was allowed for tea at the Royal George Hotel, and on the last section a secret check was announced. Competitors crawled along for mile after mile dead to schedule until a mile from Tewkesbury, when Messrs. Urry and Hardy were espied in the hedge bottom lurking behind a milestone. David Elson was nearest with but 7s. error, B. S. Gorton being next with 54s. This was the last of the intermediate checks, competitors scurrying home to make sure they arrived to time. The finish was exceedingly close, D. Elson again being first, despite a couple of punctures *en route*, so that his failure on Birdlip must have been a bitter disappointment. The official results are given hereunder. The winner—Geoffrey Smith, of *The Motor Cycle*—takes the fifty guinea challenge cup presented by the proprietors of that journal, and won by the Coventry Club in the M.C.C. Team Trials three years ago, as also a ten guinea silver cup presented by the Triumph Cycle Co., Ltd. Second, gold medal, value £5 5s., presented by Humber, Ltd. Third, club gold medal. Fourth, silver cigarette case, presented by the Rex Motor Manufacturing Co., Ltd.

DEVIATION FROM SCHEDULE SPEED OF 20 M.P.H.

Name of Rider and Machine.	Bath.		Birdlip.		Secret Check.		Finish.		Total Error.
	m. s.	m. s.	m. s.	m. s.	m. s.	m. s.	m. s.	m. s.	
1. Geoffrey Smith (3½ Triumph)	30	3	1	6	18	1	57		
2. A. Elson (3½ Triumph)	30	15	55	22	2	2			
3. G. T. Mills (3½ Triumph)	1	0	2	3	31	31	7	4	
4. S. Wright (3½ 2-speed Humber)	1	0	2	0	5	15	55	0	10
5. C. S. Burney (3½ Rudge)	nil		7	15	7	16	1	5	15 36
6. A. L. Ommoney (3½ Rudge)	2	30	7	45	8	27	1	8	19 50
7. R. Lord (3½ water-cooled Rex)	3	0	8	24	8	8	1	5	20 37

The under-mentioned motor cyclist competitors failed on Birdlip at the first attempt, but will be awarded souvenirs, as they did not vary more than ten minutes from schedule at any of the checks.

Name of Rider and Machine.	Bath.		Birdlip.		Secret Check.		Finish.		Total Error.
	m. s.	m. s.	m. s.	m. s.	m. s.	m. s.	m. s.	m. s.

H. Nelson Smith (25 Hillman car)	1	30	50	2	19	30			5 18

J. H. Pountney (3½ Rover) exceeded time limit at finish.

G. Van Vestrant (3½ Rover) was 14 mins. late at Bath and retired.

Survivors of the Coventry and Warwickshire M.C. 200 miles trial to Bath and back, held on Saturday last.

CURRENT

CHAT

SPECIAL FEATURES.

ROUTE FOR THE SIX DAYS TRIALS.
Description and Illustrations.

TENDENCY OF DESIGN.

B.M.C.R.C. MEETING AT BROOKLANDS.

Half-yearly Index

An index to *The Motor Cycle* for the first half of the current year is now ready, and a copy may be obtained by forwarding 3d. in stamps to our publishing offices.

Police Traps.

Another police trap is being worked on the Pinner-Rickmansworth Road. It is slightly downhill, and very little traffic passes over the road in the daytime. The convictions are numerous.

The Interest in the T.T.

The Dutch motor cyclists who came over specially for the T.T. Races enjoyed themselves immensely. A letter of thanks from the hon. sec. is published in our Correspondence pages.

Convalescents in the Isle of Man.

Readers will be pleased to hear that T. L. Rankin and A. J. Stevens, who are at the Cottage Hospital, Ramsey, Isle of Man, are both well on the way to recovery. Rankin was ready to go home last Monday, but Stevens will be there for some two or three weeks yet.

Putney Bridge Traffic Census.

In taking the Seventh Annual Traffic Census on Putney Bridge lately, organised by H. H. Griffin for our contemporary *Motor Traction*, there was a great increase in motor cycles over the previous year, and with regard to forecars and sidecars, the latter predominated, there being only a few instances of the former method of carrying a passenger. The total showed 1,157 motor cycles and 78 with passenger attachments.

T.T. Donation to Ramsey Hospital.

£30 has been contributed by motor cyclists visiting the Isle of Man towards the funds of the Ramsey Hospital, writes Mr. J. R. Nisbet. The following are details of the subscriptions:

Collected by Mrs. W. G. Aston:	
July 4th, in Douglas	... £12 11 10½
July 5th, on steamer to	
Liverpool	... 4 5 3
Mrs. Mary Ann Spibey	... 5 0 0
	£21 17 1½
Collected by Miss Brooker:	
July 4th, in Douglas	... 1 17 0
Donation from Hotel Sefton	
sweepstake	... 5 0 0
A. N. Other	... 1 5 10½
	£30 0 0

Circuit of Britain Flying Race.

In connection with the flying race round Britain for the £10,000 prize offered by the *Daily Mail*, our contemporary, *The Aero*, is issuing a 12 page booklet which contains a map of the course, a full list of the entrants, their order of starting, the make of machines and the nationality, and a short biography of the pilots, together with scoring sheets for each section of the race, in which those who are interested can fill in the times at which the flying men arrive at and leave the various controls. A copy of this booklet will be sent free of charge to any reader of *The Motor Cycle* who makes early application to the proprietors, *The Aero*, 20, Tudor Street, E.C.

A.C.U. (MIDLAND CENTRE) HILL-CLIMB AT MUCH WENLOCK.

H. C. Newman (3½ h.p. Ivy-Precision) travelling well. By the time he reached this point he had left all his opponents except W. F. Newsome.

TIME TO LIGHT LAMPS.

July 20th	...	9.5 p.m.

" 26th	...	8.54 p.m.

Auto Cycle Union News.

PROTESTS.—At the Competitions Subcommittee, on the 13th inst., the protest lodged by C. R. Collier against the T.T. winners was not upheld.

MEMBERSHIP.—205 touring members were elected, and nine full members.

AFFILIATION.—The following clubs were affiliated: Torbay and District M.C.C., Tunbridge Wells and District M.C.C., and Mansfield and District M.C.C.

COUNCIL MEETING.—The date of the next council meeting is suggested some time in October, and the Midland Centre have written suggesting the Friday before the Quarterly Trials, and that it be held somewhere in the Birmingham district.

QUARTERLY TRIALS.—H. G. Cove has suggested that the October Quarterly Trials course should take the south-west direction, so as to include Bristol.

CLASS RECORDS.—The following class records were passed: Class C.—Fifty miles, 48m. 37s., G. E. Stanley (Singer), at Brooklands, June 21st. Class E.—Flying kilometre, 26½s.; flying mile, 41½s.; and flying five miles, 3m. 43s., Jake de Rosier (Indian), at Brooklands, July 8th.

Scottish Six Days' Trial.

Thirty-six entries have been secured for the Scottish Trials which will start from Edinburgh on Monday next under the control of the Edinburgh and District M.C. Fifteen of the machines are twin-cylinders and twenty-one single-cylinders. There are only two passenger machines, both sidecars. Widespread interest is being taken in the event.

The P. & M. Toolbagless Trial.

Motor cyclists will sympathise with W. Pratt, who was compelled, through no fault of his own, to abandon his self-imposed task of riding 1,000 miles in six days without opening his toolbag. He had covered 600 miles, and reached Seven Springs *en route* for Gloucester, without misadventure on Thursday last when he encountered a young colt, which was being broken in on the high road. Pratt was riding at a moderate speed, and had to take the bank to avoid the colt's heels. He was thrown off and bruised and shaken, his machine being too badly smashed to enable him to continue.

Sutton Coldfield Speed Trials.

The second annual speed trials took place last Monday morning in Sutton Park. There was a large number of spectators present who enjoyed the sport. Results:

CLASS I. (for lightweight singles 300 c.c., twins 345 c.c.)—First on formula, J. J. Woodgate (2½ Singer); second, H. C. Newman (2½ Ivy-Precision); third, H. V. Colver (2¾ Enfield).

CLASS II. (for single touring machines up to 600 c.c.)—First on formula, C. Roper (3½ Ivy-Precision); second, H. C. Newman (3½ Ivy-Precision); third, A. P. Ansell (3½ Ivy-Precision).

CLASS III. (for T.T. machines).—First on formula, Jack Woodhouse (Dot-Precision); second, Frank Magee (3½ Triumph); third, K. Clark (3½ Corah).

UNLIMITED CLASS (for any type of machine).—First on formula, J. J. Woodgate (2½ Singer); second H. Pickering (2½ A.J.S.); third, N. Kickham (2½ Douglas). There were two unfortunate accidents. G. A. Swinger colliding with a non-competitor, and later a car full of passengers was overturned.

Transporting Motor Cycles to the Isle of Man.

In our letters columns a motor cyclist this week ventilates a serious grumble as regards the arrangements for shipping and transshipping motor cycles on the Isle of Man boats. It appears that an electric crane is used at Heysham. Would that the Isle of Man Steam Packet Co. would follow the Midland Railway Co.'s example.

days' instruction in camp immediately prior to the manoeuvres. Motor cyclists who are interested should communicate with the secretary, A.A. and M.U., Caxton House, Westminster, S.W.

Speed Trials at Clipstone.

At the Nottingham Club's speed trials at Clipstone last Saturday, J. D. Mitchell (Triumph) won the single-cylinder class, F. P. Johnson (5 h.p. Matchless-Jap) being successful in the twin class.

A Coincidence.

A motor cyclist passing through Epping Town pulled up to see to something that had gone wrong. Another motor cyclist pulled up, offering help. A policeman noticed that both numbers were alike, and asked for their licences. One man produced his. The other stated that he had left his at home.

A Surfeit of Six Days' Records.

On Monday, the 17th inst., at 12 a.m., a rider of a 3½ h.p. Rudge, A. W. Brittain, of Buxton and Cambridge U.M.C.C., left Buxton in an attempt on the six days' record. The records received at our office show that he had completed 372 miles by teatime. On Salisbury Plain he suffered a bad cut in the back tyre and retired.

Another rider, J. Guzzwell, is to make a similar attempt on a 3½ h.p. Triumph, starting next week.

Next Saturday's Quarterly Trials.

The following entries have been received for next Saturday's A.C.U. Quarterly Trial: H. Mason (4 Matchless), A. Keen (5 A.C.), A. Hill (3½ Rudge), E. Ware (8 Chater-Lea and sc.), E. Merrall (3½ P. and M.), G. Bell (3½ New Hudson), A. G. Dixon (3½ New Hudson), B. Cooper (3½ Premier), P. Hall (3½ Bradbury), H. McManus (3½ Scott), F. Smith (5 Clyno and sc.), G. B. Hall (4 Matchless), F. Wasling (2¾ Enfield), C. Burney (3½ Rudge), A. J. Stevens (2½ A.J.S.), J. Stevens (2½ A.J.S.), J. Henderson (3½ Precision), K. Bates (3½ Scott), W. Applebee and L. Clark (3½ Dene-Precisions), L. Rosenvinge (3½ Ariel), J. Wood (3½ Dene-Precision), J. Baty (4½ Dene-Precision), and R. Spencer (3½ Bradbury). The start is from Newcastle-on-Tyne.

FUTURE EVENTS	
July 22—A.C.U. Quarterly Trial (Northern)	
.. 22—Torbay and District M.C.C. Open Hill-climb

.. 14-19—A.C.U. ANNUAL SIX DAYS' RELIABILITY TRIAL. HARROGATE AS A CENTRE.	

Military Motor Cyclists.

The War Office has again requested the A.A. and M.U. to furnish a contingent of motor cyclists to do duty with the Directing and Empire Staffs during the forthcoming army manoeuvres (September 16th-26th). The rates and allowances, etc., by the War Office will be the same as last year, viz.: (a) Third-class railway fares for cyclists, and rail conveyance for their motor cycles between their homes and the manoeuvre area. (b) Cost of messing whilst in camp, or payment of bills for food and lodging at hotels. (c) Special allowance of six shillings and sixpence per diem, not including days on which train journeys are performed, to cover cost of petrol and up-keep of motor cycle, including insurance of machine against accidents. It is proposed, as last year, to arrange a two

MONDAY MORNING'S SPEED TRIALS OF THE SUTTON COLDFIELD A.C.
C. Roper (3½ h.p. Ivy-Precision) winner of Class II. (See results on this page.)

THE B.M.C.R.C. MEETING.

Some Excellent Racing. De Rosier narrowly beats C. R. Collier.

THE B.M.C.R.C. Meeting at Brooklands on Saturday was favoured with ideal weather. The sun was for once in a way hidden behind clouds, and the cool breeze blowing from the North-east made the fork a much more endurable point of vantage than it generally is. Sufficient publicity had been given to the de Rosier-Collier match to attract support from the general public, and the crowd at the fork was quite the best we have ever seen at any purely motor cycle meeting at Brooklands.

The programme opened shortly after three o'clock with the first de Rosier-Collier match. This tussle between the national champions was spread over three separate events, namely, $5\frac{1}{2}$ miles, $13\frac{1}{2}$ miles, and 27 miles, any two out of the three matches deciding the winner. The men were given a rolling start and mounted their machines below the fork at the point where the big banking flattens out towards the finishing straight. They toured along towards the fork

tank. It became clear that, whatever the Matchless might be doing, the Indian still had something in hand, and de Rosier was evidently so confident in the ability of his mount that he could let his opponent do a little pacemaking for him. Again coming from the bridge the Englishman was several lengths in front, but halfway along the railway straight the American had drawn level. After passing the aeroplane sheds the two machines seemed to merge into one, but the hope of England was dashed to the ground as they rounded the curve, for it could be seen that the white-jerseyed Collier was acting as a background to the crouching leather-covered Jake. With a roar and a whizz they flashed over the finishing line, de Rosier winning by about a length after probably the most exciting race on record.

Jake de Rosier's performance was as follows: Time, first lap, 2m. $4\frac{1}{2}$ s.; time second lap, 1m. $58\frac{3}{4}$ s.; total time, 4m. $2\frac{1}{4}$ s.; speed 80.59 m.p.h. Collier was $\frac{1}{8}$ s. slower.

Specification: J.A.P.
twin engine, overhead
valves, 90 mm. \times 77.5
mm.—985 c.c. capacity.
Tyres: Extra heavy
 $26 \times 2\frac{1}{2}$ in. Hutchinson.

CHARLES R. COLLIER,
the British Champion,
mounted on the Match-
less-Jap on which he
contested a series of
three races against the
American Champion.

abreast of the official car, in which stood Mr. Ebbelwhite armed with a red flag. This was dropped a few yards on the hinder side of the starting line, and away the machines went, crossing the line very close together. This principle of starting was employed in all the international matches, and proved very successful, as it entirely prevented the more athletic capabilities of the rider from affecting the issue of the race. C. R. Collier was riding his red Matchless twin with 90 mm. bore by 77.5 mm. stroke (985 c.c. capacity), whilst de Rosier bestrode his Indian "No. 21." 994 c.c.

In the first match Collier was first over the starting line, with Jake hard upon his wheels. Up the hill the Englishman at once commenced to establish a promising lead, probably due to the use of a rather lower gear. Sweeping on towards the Byfleet banking with the wind almost directly behind them, there was scarcely any perceptible space between the two machines. Turning into the fork, it was seen that Collier was a little in front, and about a length and a half separated the men at the completion of the first lap. From the way in which de Rosier rode, he adopted a far more erect position than C.R., who crouched right down on his

Ten Laps Scratch Race.

The second race was a ten lap open scratch race for 500 c.c. engines, and brought out six starters—A. Baker-White (Trump-Jap), W. F. Guiver (Kerry-Abingdon), F. A. McNab (Trump-Jap), W. A. Oldman (Zenith Gradua), G. E. Stanley (Singer), and R. N. Stewart (Trump-Jap).

Oldman was quickest away, and, thanks to his gear, was easily leading the field until the railway straight was reached. Here, Stanley, travelling very well, got in front, followed by McNab and Baker-White.

The end of the first lap found Stanley leading McNab by fifty yards, with Baker-White third by a similar distance.

The same positions were maintained at the conclusion of the second circuit, except that Oldman passed into third place by picking up Baker-White, whose valve lengthened.

The same order was maintained until the end of the race. Stanley lengthened his lead over the giant McNab to 120 yards in the third lap, but failed in the next seven circuits to increase it any further, while Oldman gradually got further and further behind McNab.

The B.M.C.R.C. Meeting.—

Stanley completed the distance (about twenty-seven miles) in 27m. 5½s., McNab in 27m. 9s. and Oldman in 28m. 49½s. Winning speed, 60.31 m.p.h.

Collier Wins the Second International Match.

The third event was the second de Rosier-Collier match over five laps, equal to about thirteen and a half miles.

As before, the lead which Collier managed to get against the wind and up the hill was neutralised before half a lap was gone. The completion of the first lap found de Rosier hanging a wheel's diameter behind the leader. The second lap found the position entirely unchanged, but the see-saw struggle behind the hill was repeated once more. In the middle of the third lap a tremendous shout was raised when it was seen that de Rosier was stopping, and that Collier had flashed out of sight behind the sheds ere his rival had reached the Byfleet banking. Collier completed his third lap amidst ringing and enthusiastic cheers, and hardly slackening his speed held on two more laps, and crossed the line an easy winner, thus making the match "all square."

R. J. Bell (2 M.R.)

JAKE DE ROSIER,
the champion motor
cyclist of America, who
won the International
Match at Brooklands
last Saturday, riding a
7 h.p. Indian.

Specification : Twin
Indian, auxiliary ex-
haust ports, overhead
inlet valves, 82.5 x 93
mm. = 99½ c.c. capa-
city. Tyres : 28in. x
2in. Blue Streak and
Continental.

Shortly after he had finished the American came ambling nonchalantly in on the rim, with the front cover hanging on the fork stay and the shreds of what had once been an inner tube flapping in the breeze. When the crowd realised what had happened it awarded de Rosier the mighty cheer his pluck and cleverness deserved. Flying along the railway straight at what must have been only a fraction under ninety miles an hour, a small stone had pierced his front tyre, with the result that it was flat in a second or two. That the rider managed in such circumstances to keep on his machine speaks volumes for his nerve and resource, but how he managed it will remain a mystery. On his arrival willing knives hacked the cover off, but, unfortunately, no spare was to hand, and accordingly it was arranged that de Rosier should use Godfrey's front wheel after the conclusion of the next race. Collier's time was 10m. 12s. and speed 79.9 m.p.h.

The All-Comers Open Handicap brought forward the following starters :

The star performer was Godfrey from scratch. Getting away in his best style, he was soon up to his old game of overhauling the field, and one by one they fell behind him. The T.T. winner takes a different line from anybody else in coming down past the fork, as he cuts across quite close to the extreme outer edge of the track, thus giving the lap scorers a sensation in the way of speed, as he nips along literally under their noses, and in doing so appears to leap about in an alarming manner. This, however, is more or less of an optical delusion, as directly he is "end on" again his steadiness is obvious enough.

Godfrey's speed proved to be too hot for the others, and his lap scorer was given plenty to do in recording the circuits he was reeling off. He passed his last rival on the big banking, and roared home an easy winner by 17s., with Martin second, and McNab a close third, 20s. behind the winner. Gross time, 20m. 17s.; nett time, 10m. 57s.; speed, 74.46 m.p.h.

C. R. Collier (England) and Jake de Rosier (America) starting in the second International race.

Now came the great deciding match of the international contest, this time over a distance of ten laps (about twenty-seven miles). Excitement ran high, as it was thought that, although Jake had the faster machine, Collier's possibly better staying powers might wear him down, and odds of 5 to 4 on Collier were freely offered and taken. Godfrey's 2in. Continental tired wheel was soon in the place of de Rosier's battered rim. The first start was a false one owing to Jake experiencing some ignition trouble. The magneto carbon brush was eventually found to be at fault, and on the insertion of a new one everything went all right.

The starting line was crossed with C.R. three lengths ahead of the Indian, but Jake finished the first lap a wheel ahead of his opponent, only to drop back again behind the aeroplane sheds. The second lap found Collier just in front with de Rosier so close at his side that the riders might have shaken hands. A lap later de Rosier was ahead by over two lengths, but on the straight Collier picked up this distance and as much again by the railway, and covered the half-mile in 21½s. He was still leading at the end of the fourth lap, and seemed to be going so well that hope that England would annex the honours ran high. The worst of bad luck, however, was to come along, for shortly after completing the half distance his handle-bar switch jumped into the "off" position, and to the accompaniment of a gasp of dismay C.R. slowed down with a puzzled look on his face. A few seconds sufficed to locate the trouble, but they were fatally long ones, for already Jake was half a mile ahead of him and going as strong as ever. Collier got his machine going magnificently, and on completing the sixth lap was given a roar of encouragement from the crowd, but his position was now seen to be hopeless. Jake, leaving nothing to chance, hammered along at a tremendous speed, and Collier was never able to make up so much lost ground.

De Rosier crossed the line amid great enthusiasm, willingly accorded by an admittedly partisan crowd for his fine per-

formance and equally so for the thoroughly sporting conditions of the match. Jake accordingly wins the purse of £130, with added money, and there is none who can say that he does not deserve his triumph.

Scene during the ten lap race. A Bristol biplane over the heads of the spectators.

The winner's time was subsequently announced as 20m. 44½s. Speed, 78.64 miles per hour. Collier was 20s. slower.

The line-up of competitors in the All Comers' handicap. The greatly improved attendance will be noted.

A.C.U. (Midland Centre) Open Hill-climb.

ON Saturday last Harley Bank, near Much Wenlock (Salop), was again the venue of the open hill-climb promoted by the Midland Centre of the A.C.U. The nine clubs comprising the centre, of which the hon. secretary is Mr. Harold C. Pickering, had secured an excellent entry as will be seen from the names of the contestants in the list of results, and it was again decided to run off the events on the "knock-out"

At the rendezvous, Much Wenlock.

principle. The competitors started in pairs; the winner of each pair met in the following heats until the victor alone survived. Inside position (left hand) was tossed for, and the ordinary rule of the road enforced. Competitors had to allow at least three machine lengths before cutting into inside position.

The finishing point was about forty yards lower than it was last year to minimise any chance of accident at the last bend, which curves rather sharply to the right; no spill occurred here, but Reg Edwards ran into the bank at the bend below when endeavouring to pass H. C. Newman in the second round of Class E, fortunately without serious injury to himself or machine.

The competition was advertised to start at 2 p.m., but it was nearly an hour later when the lightweights opened the ball, and delays were rather lengthy, chiefly due to the facts that the hill is on an important main road between Shrewsbury and Worcester, and ordinary traffic had to be considered, and the foolish behaviour of a number of non-competitors who rode up and down the hill for no other apparent purpose than to show they could get up at touring speeds. The organisation cannot be blamed for this, but spectators, and in some cases competitors should remember that these events are held to provide an afternoon's sport for the majority, and their conduct is an impediment to future permission being obtained.

Some Exciting Duels.

Some particularly fine racing was witnessed in all the classes, especially in the long straight stretch before the bad bend near the summit; on this straight many of the races were won or lost, as a competitor who lost his position before the bend seldom regained it, but had to take his rival's "back wash" in the form of dust. There were close finishes in Class D between Ashley (Triumph) and Edmond (Premier); in Class E, Evans (Triumph) and C. T. Newsome (T.T. Rover) rode almost a dead heat. Woodhouse had entered in the 500 c.c. touring class, but the judges would

not pass his Ivy-Precision mount, as it had rigid forks and a dropped racing handle-bar.

Newman's performance is worthy of special notice, as he handled his $3\frac{1}{2}$ h.p. Ivy-Precision with masterly skill in Classes D and E, beating Roper on another $3\frac{1}{2}$ h.p. machine of the same make in Class D, and after a close finish with the redoubtable W. F. Newsome (Triumph) he landed home his T.T. Ivy-Precision first in the event for Senior T.T. mounts.

Newman, who is an exceedingly clever rider, wore a racing helmet. His engine had a flexible tubular connection between the crank case and the Amac carburetter, which gave a forced feed to the jet and helped to vaporise the petrol. A tap was provided close to the exit of the pipe from the crank case, and the pipe union was fitted over the timing gear cover. Newman is 23 years of age and weighs nine stones. An objection was made to his engine at the close of the competition, but on the cylinder being removed it was found to be within the size permitted. Newsome rode the same machine he used in the Isle of Man. E. J. Bolton had an Amac carburetter on his Indian, which is unusual.

In the twin lightweight touring class Evans (Humber) and Colver (Enfield) were making a fine race of it till the bend, when Evans appeared to miss the change and lost ground.

In the variable gear class riders had to bring their road wheels to a standstill between two lines, and then to restart. This test was carried out on one of the steepest parts of the hill, and as the men rode in pairs it was additionally instructive. Colver (Enfield) was very smart in stopping and getting away, but had good runners up in R. W. Duke (Zenith Gradua) and G. Patterson, jun. (New Hudson). Those who overshot the line were allowed to restart from between the lines provided they did not stop their engines. The meeting was not over until after seven, and many spectators and competitors in the earlier events had by that time gone home.

Results.

CLASS A.—Single-cylinder lightweights not exceeding 300 c.c.

1st Round.—H. C. Newman ($2\frac{1}{2}$ Ivy-Precision) beat G. Bell ($2\frac{3}{4}$ New Hudson).

2nd Round.—J. D. Corke ($2\frac{1}{2}$ A.J.S.) beat H. W. Mahler ($2\frac{1}{2}$ Levis, two-stroke).

Final.—Corke beat Newman (Newman's engine refused to fire at start, terminal detached from plug).

CLASS B.—Twin-cylinder lightweights not exceeding 350 c.c.

1st Round.—H. G. Dixon ($2\frac{3}{4}$ New Hudson) beat H. J. Cox ($2\frac{3}{4}$ Forward).

H. J. Cox (Forward) and H. Graham Dixon (New Hudson) starting in the first round of Class B of the Wenlock Edge Hill-climb. H. G. Dixon won.

2nd Round.—H. V. Colver (2½ Enfield) beat P. J. Evans (3 Humber).

Final.—Dixon beat Colver.

CLASS D.—Single-cylinders not exceeding 500 c.c.

1st Round.—R. W. Ashley (3½ Triumph) beat F. G. Edmond (3½ Premier); R. W. Duke (3½ Zenith) beat P. E. Tolfree (3½ Matchless); B. A. Hill (3½ Rudge) beat S. H. Davis (3½ Rex); C. Roper (3½ Ivy-Precision) walk over.

C. Roper (Ivy-Precision) in the second round of Class E in the Wenlock Edge Hill-climb. He overtook and passed W. D. South (Triumph) on this bend at a great speed, afterwards nearly fouling the bank, scattering spectators in all directions.

2nd Round.—Duke beat Ashley; Roper beat Hill. Byes: H. Riddell (3½ Blumfield) walk over; S. Crawley (3½ Triumph) beat A. Clarke (3½ Dene-Precision); H. C. Newman (3½ Ivy-Precision) beat K. Holden (3½ B.S.A.); S. C. Perryman (3½ Calthorpe) walk over.

3rd Round.—Roper beat Duke; Crawley beat Riddell; Newman beat Perryman.

Semi-final.—Roper beat Crawley.

Final.—Newman beat Roper.

Tourist Trophy and Racing Machines.

CLASS C.—Singles and twins, Junior T.T.

1st Round.—H. G. Dixon (2½ New Hudson) beat C. Keyte (2½ Enfield); F. Smith (2½ Enfield) walk over.

2nd Round.—Dixon beat Smith. Byes: H. Cox (2½ Forward) beat H. V. Colver (2½ Enfield); P. J. Evans (3 Humber) beat J. Dudley (2½ Hobart); G. Patterson (2½ New Hudson) beat A. J. Stevens (2½ A.J.S.).

Semi-final.—Dixon beat Cox; Patterson beat Evans.

Final.—Patterson beat Dixon.

CLASS E.—Singles and twins, Senior T.T.

1st Round.—W. R. Jones (4 Ixion-Jap) beat P. Brewster (3½ Norton); J. W. Woodhouse (3½ Dot-Precision) walk over; G. Potts (3½ Triumph) beat F. P. Mayell (3½ Triumph); P. J. Evans (3½ Triumph) beat C. T. Newsome (3½ Rover); S. Crawley (3½ Triumph) beat R. N. Corah (3½ Corah); W. F. Newsome (3½ Triumph) walk over; J. H. Slaughter (3½ L.M.C.) beat V. G. Underhill (3½ Norton); W. Creyton (3½ Triumph) beat A. Clarke (3½ Dene-Precision); H. C. Newman (3½ Ivy-Precision) beat K. H. Clark (3½ Corah); Reg. Edwards (3½ Triumph) beat K. Holden (3½ B.S.A.).

2nd Round.—Woodhouse beat Jones; Potts beat Evans; Newsome beat Crawley; Creyton beat Slaughter; Newman beat Edwards. Byes: C. Roper (3½ Ivy-Precision) beat W. D. South (3½ Triumph); Howard Smith (3½ Triumph) beat H. Goldman (3½ Premier); S. C. Perryman (3½ Calthorpe) beat H. L. Cooper (3½ Triumph).

3rd Round.—Potts beat Woodhouse; Newsome beat Creyton; Newman beat Roper; Howard Smith beat Perryman.

Semi-final.—Newsome beat Potts; Newman beat Smith.

Final.—Newman beat Newsome.

CLASS F.—Unlimited.

1st Round.—E. J. Bolton (7 Indian) beat Newman (3½ Ivy-Precision); R. N. Corah (3½ Corah) walk over; H. G. Potts (3½ Triumph) beat S. Crawley (3½ Triumph); A. D. Arter (3½ James) beat F. G. Brock (7 Rex); W. F. Newsome (3½ Triumph), Reg. Edwards (3½ Triumph) walk over; W. Creyton (3½ Triumph) beat J. Slaughter (3½ L.M.C.); J. J. Cookson (7 Matchless) beat T. Pollock (3½ James); Howard Smith (3½ Triumph) beat E. Smith (4½ Regal); E. F. Baxter (7 Rex) beat H. Goldman (7 Rex).

2nd Round.—Bolton beat Corah; Potts beat Arter; Edwards beat Newsome; Cookson beat Creyton; Baxter beat H. Smith. Byes: K. H. Clark (3½ Corah) walk over; J. W. Woodhouse (4½ Dene-Precision) beat W. D. South (3½ Triumph).

3rd Round.—Bolton beat Potts; Cookson beat Edwards; Baxter beat Clark; Woodhouse w.o.

Semi-final.—Bolton beat Cookson; Woodhouse beat Baxter.

Final.—Bolton beat Woodhouse.

FREE ENGINE AND VARIABLE-GEAR CLASS.

1st Round.—H. V. Colver (2½ Enfield) beat J. Dudley (2½ Hobart).

2nd Round.—Byes: H. V. Colver (2½ Enfield) beat H. G. Dixon (3½ New Hudson); A. J. Stevens (2½ A.J.S.) walk over; G. Patterson (3½ New Hudson) beat J. D. Corke (2½ A.J.S.); R. W. Duke (3½ Zenith) beat S. C. Perryman (3½ Calthorpe).

Semi-final.—Colver beat Stevens; Patterson beat Duke.

Final.—Colver beat Patterson.

TO-DAY'S BROOKLANDS MEETING.

Entries for the two motor cycle events to be held at Brooklands to-day (Thursday), viz., the fourth "Short" race and the fourth "Long" race, are as under:

	Bore and Stroke.
W. H. Bashall (2 cyl. Bat-Jap) ...	76 × 64
R. N. Stewart (1 cyl. Trump) ...	90 × 77½
H. Martin (1 cyl. Martin-Jap) ...	85½ × 60
A. S. McIntyre (1 cyl. Triumph) ...	85 × 88
J. T. Bashall (2 cyl. Bat-Jap) ...	76 × 64
G. B. S. McBain (1 cyl. Douglas) ...	62 × 62
H. Shanks, jun. (1 cyl. Kingfisher) ...	85 × 60
J. de Rosier (2 cyl. Indian) ...	82½ × 93
J. G. Birch (1 cyl. Triumph) ...	85 × 88
S. T. Tessier (2 cyl. Bat) ...	76 × 64
V. Wadham (1 cyl. Zenith) ...	85½ × 85
C. R. Collier (2 cyl. Matchless) ...	90 × 77½
H. A. Collier (2 cyl. Matchless) ...	76 × 64
W. Johnson (1 cyl. Buchet) ...	76 × 73
G. E. Stanley (1 cyl. Singer) ...	85 × 88
A. G. Jeffcott (1 cyl. Singer) ...	69 × 79
G. Lee Temple (1 cyl. Singer) ...	69 × 79
J. R. Haswell (1 cyl. Triumph) ...	85 × 88
A. J. Luce (2 cyl. Bat) ...	85 × 65
J. Gibson (1 cyl. Martin-Jap) ...	76 × 65
F. A. McNab (1 cyl. Trump) ...	90 × 77½
A. Baker White (1 cyl. Trump) ...	85½ × 85
A. J. Dixon (1 cyl. Rudge) ...	85 × 88
Stanhope Spencer (1 cyl. Rudge) ...	85 × 88
S. T. Tessier (2 cyl. Bat-Jap) ...	76 × 64

Racing starts at 12 noon.

SATURDAY'S B.M.C.R.C. MEETING.

R. G. Bell (M.R.), who, in the All Comers' Handicap, received nine minutes' start and completed a lap before the other competitors had started.

Sheffield and Hallamshire M.C.C.

In the annual reliability run on the 15th inst., from Sheffield to Holyhead and back, a distance of 360 miles at a speed of twenty miles per hour, the results were as follows: 1. Daniel Bradbury ($3\frac{1}{2}$ h.p. Norton), lost two marks, wins first prize and "Hutton" shield; 2. J. A. Stacey ($3\frac{1}{2}$ h.p. Rudge), lost three marks; 3. C. Bellamy ($3\frac{1}{2}$ h.p. Zenith), lost three marks.

Marlborough Athletic Club (Motor Cycle Section).

The 100 miles reliability trial on July 2nd from Kilburn to Bicester and back secured eleven starters. The winners proved to be 1. R. White ($2\frac{3}{4}$ h.p. Minerva); 2. A. W. Loughlin ($3\frac{1}{2}$ h.p. Peugeot); 3. P. Bounds (8 h.p. J.A.P.).

North Middlesex M.C.C.

A slow race on the 8th inst. proved a great success and most interesting. Results:

Fixed Gears.—1. Mr. Scholzig ($3\frac{1}{2}$ h.p. Triumph); 2. Mr. Bennett ($3\frac{1}{2}$ h.p. T.T. Norton); 3. Mr. Lowe ($3\frac{1}{2}$ h.p. Lincoln Elk).

Variable Gears.—1. Mr. Hilger ($3\frac{1}{2}$ h.p. Humber); 2. Mr. Boccock ($4\frac{1}{2}$ h.p. four-cylinder F.N.); 3. Mr. Dangerfield ($3\frac{1}{2}$ h.p. Zenith).

Leeds M.C.C.

A reliability trial from Leeds to Edinburgh and back took place last week-end. A large concourse of riders assembled in City Square, Leeds, at five o'clock on the 15th inst. There were very few non-starters out of a total entry of forty, including five in a special class for cars only. We give a list of survivors: W. Moorfoot ($2\frac{3}{4}$ Enfield); R. Ellis ($5\frac{1}{2}$ B.S.A.), valve trouble; H. Wilkinson ($3\frac{1}{2}$ Scott); J. R. Kelly ($3\frac{1}{2}$ Rex) arrived; P. Plews ($3\frac{1}{2}$ Rudge), punctures; W. Tetley ($5\frac{1}{2}$ Rover), puncture and burst tyre; G. Crossley ($3\frac{1}{2}$ Rover), slight belt trouble; C. P. Finn ($2\frac{3}{4}$ Enfield), tightened chain; S. G. Fenton ($3\frac{1}{2}$ Zenith); P. Cockroft ($3\frac{1}{2}$ Triumph); W. Bateson ($3\frac{1}{2}$ Triumph), broke valve and punctures; J. and H. Gash (6 B.G. and sidecar), puncture; G. Smith ($3\frac{1}{2}$ Scott); J. Robinson (5 V.S.), punctures; T. H. Baker (5 Rex and sidecar); S. Woolley ($5\frac{1}{2}$ L.M.C.), lost way; F. Roberts ($3\frac{1}{2}$ Singer); G. Spence ($3\frac{1}{2}$ Premier), slight skid in Newcastle; R. Glenn ($3\frac{1}{2}$ Triumph); W. E. Asquith ($5\frac{1}{2}$ Triumph), broken belt; H. Brook ($3\frac{1}{2}$ Triumph), broken belt; G. Sharpe ($3\frac{1}{2}$ Rover), burst tyre; J. Delmore ($3\frac{1}{2}$ Rover); A. Gray ($3\frac{1}{2}$ Rover), not reported; T. Hainsworth ($3\frac{1}{2}$ Rover); J. Dockray ($3\frac{1}{2}$ P. and M.), lost way.

Irish End-to-end Trial.

Nineteen competitors started in the above M.C.U.I. event on the 13th inst. from Mizen Head, to ride to Fair Head, a distance of 394 miles. The early hour of 1 a.m. did not prevent the sporting inhabitants from witnessing the start.

A group of the survivors: M. J. Lindsay, P. Phillips, J. Stewart, J. Healy, E. Clark, W. H. Humphrey, W. J. Chambers, L. Dobbin, T. Sloan, J. A. Carvill, and C. E. Murphy.

The first prize was the Palmer Cup. Douglas Bros. presented the second, the B.S.A. the third, and the Rex Motor Manufacturing Co. gave a special prize. At Ballyroy the results showed that the following had scored full marks at all open controls: J. Stewart, M. J. Lindsay, J. A. Carvill, P. Phillips, and W. J. Chambers. To determine the final winner it was necessary to utilise the times taken at the secret controls. 1. J. Stewart ($3\frac{1}{2}$ h.p. Triumph); 2. W. J. Chambers ($3\frac{1}{2}$ h.p. B.S.A.); 3. M. J. Lindsay ($3\frac{1}{2}$ h.p. Triumph). Gold medals were also won by J. A. Carvill ($3\frac{1}{2}$ h.p. Triumph) and P. Phillips ($2\frac{3}{4}$ h.p. Douglas), and certificates by E. Clark ($2\frac{3}{4}$ h.p. Douglas), J. Healy ($3\frac{1}{2}$ h.p. Rudge), L. Dobbin ($3\frac{1}{2}$ h.p. Rudge), W. Humphrey ($3\frac{1}{2}$ h.p. Humber), P. Sloan ($3\frac{1}{2}$ h.p. Rudge), and C. E. Murphy ($3\frac{1}{2}$ h.p. Triumph).

Start from the City Square of the Leeds M.C.C. 24 hours' reliability trial to Edinburgh and back last week end.

Some of the competitors at the start of the Norfolk M.C.C. Reliability Trial.

Ripon and District M.C.C.

Out of fourteen entries only two failed to complete the course in the 150 miles reliability trial for the President's Trophy last week. W. Hemsworth (5 h.p. Rex) and J. H. Rostron (3½ h.p. Triumph) tied for first place, C. Kay (3½ h.p. Rex) being second, and A. D. Calvers (3½ h.p. B.S.A.) third.

Walthamstow M.C.

A competition for the Henbrey Silver Cup was held on July 9th over a circular course of about twenty-three miles, which was covered four times. Watches and speedometers were barred. Competitors had to ride as near twenty miles per hour as possible. The following are the results:

Rider and machine.	Award.	Error.
1. T. C. Dutfield (3½ Triumph), cup and gold medal		7 20
2. G. Humphreys (2 Centaur), gold medal		8 3½
3. W. Wilson (3½ Minerva tricar), gold medal		8 14

Doncaster and District M.C.C.

The second competition of the series for the president's cup took place last Thursday, at Pickthorn Hill, the results being as follows:

Rider and machine.	Position on time.	Position on formula.	Marks awarded.
F. H. Dunstan (3½ Rudge)	X	.5260	100
T. W. B. Durant (3½ J.A.P.)	3½s.	.5626	93.5
E. R. Scott (3½ Premier)	4½s.	.5813	90.48
E. Goult (3½ Triumph)	X	.5353	88.37

The club desires to convey its thanks to the many willing helpers whose assistance so greatly contributed to make the competition a success.

Hampshire M.C.U.

At the first gymkhana at Winchester on the 12th inst., the prize winners were: 1, K. Dickson, 5 h.p. Vindec Special (Southampton); 2, E. H. Lawes, 5-6 h.p. F.N. (Aldershot); 3, G. Laphorne, 3½ h.p. Humber (Southampton). The August event will be held near Bournemouth, when the F.N. cup, presented by Mr. A. G. H. Alford, will be competed for.

Pontefract M.C.

The second twelve hours' reliability trial was held last Thursday over a course which included York, Staxton, Scarborough, Whithy, Harrogate, and Pontefract—190 miles in all. Only three out of nine starters completed the course. 1, H. Craven (8 h.p. Chater-Lea and sidecar); 2, E. Lee (3½ h.p. Scott); 3, Col. J. R. Shaw (4 h.p. Scott). Thanks are due to the Scarborough, Middlesbrough, and Harrogate clubs, and to Mr. F. Topham, of Ripon, who kindly worked the controls and several of the secret checks.

Manchester M.C.

A very successful scratch hill-climb was held on Saturday last on the usual club hill at Heyden Bridge. A large number of cycles and sidecars put in an appearance, owing no doubt to the perfect weather conditions. Entries were taken at the start, and the results were made on horse-power, time, and previous performances in club competitions. The following are the results on handicap: 1, H. Birkett (3½ h.p. Triumph); 2, G. H. Wilson (3½ h.p. Premier); 3, D. Sykes (3½ h.p. Dot); 4, S. Jackson (2 h.p. Humber); 5, W. Houghton (3½ h.p. Rudge-Whitworth); 6, J. Oliver (5 h.p. Matchless). P. Platt (3½ h.p. Bradbury) won the passenger class with sidecar.

Competitors in the Doncaster and District M.C.C. hill-climbing contest for the President's Cup series, the results of which appear on this page.

Club News.—

Harrogate Club's Severe Long Distance Trial.

On the 9th inst., in glorious weather, the annual reliability trial for the Muratti Trophy was held over an exceedingly difficult course of 214 miles. The course included

HARROGATE & DISTRICT M.C.C. 214 MILES RELIABILITY TRIAL.

Sealing the competitors' watches prior to the start.

such famous hills as Greenhow, Kidstones, Shap, Hart-side, and Killhope, also the famous miniature Stoupe Brow from Stanhope over the moors to Eggleston. The riders had to keep up an average of twenty miles per hour, and were likely to be checked at thirty-one places, of which no less than twenty-two were working. Taking the hot weather and the steep hills into account the majority of the entrants ran well, but the loose and dangerous corner of Kidstones Pass, Killhope Pass, and the hill out of Stanhope, brought practically the whole of the riders off, Kidstones being the scene of a number of falls, and up the Stanhope Hill, which is all loose stones and sharp corners, none of the competitors made a clean ascent in the saddle. The result, however, which is worked out on the marks lost at controls is very close, but strange to relate all the winners rode single-gear machines, the three two-speed geared machines soon being behind their schedule times. The result showing the number of marks lost and trouble experienced is as follows:

Name of Rider and Machine.	Marks Lost.	Remarks.
T. C. Atkinson (3½ Triumph)	1	Puncture
1. H. W. Fortune (3½ Triumph)	1	Broke valve, and failed on Killhope through slipping belt
3. S. Clay (3½ Triumph)	2	Failed on Killhope through slipping belt
4. E. R. Davies (3½ Triumph)	7	Broke valve, and puncture
5. F. Strafford (3½ Triumph)	22	Punctures
6. W. B. Atkinson (3½ Triumph)	25	Fell at corner of Kidstones and damaged machine
7. Jim Mackay (3½ Singer)	37	Broke valve and high tension wire
*C. P. Finn (2½ Enfield, 2-sp.)	—	Seized engine.
*C. Nettleton (3½ Humber, 2-sp.)	—	Gear trouble and punctures
*J. Tranmer (3½ Norton)	—	Failed on Kidstones
†E. Barret (7-9 Rex)	—	Failed Kidstones and Greenhow. Burst back cover.
†J. J. Day (3½ Bradbury, 2-sp.)	—	Collided with cow, and damaged machine

* Lost over 100 marks.

† Did not finish.

Essex M.C.

The 200 miles non-stop competition, including flexibility tests, arranged for June 24th, has been changed to 100 miles and will be run off on Saturday, July 22nd, starting from headquarters at 3 p.m. sharp. Will any non-competing members who would help in any way kindly communicate with E. J. Bass? On July 23rd the second standard ride is being held, full particulars and route cards from T. M. Tyson, 29, Osborne Road, Forest Gate.

Mersey M.C.

A secret hill-climb for members will take place on July 23rd. Competitors will be advised of a meeting place, and will then be conducted to the hill. At the same venue will be re-run the hill-climb held at Cilcau on June 22nd, the times at this event having been taken incorrectly. Only entrants in the postponed climb will be eligible.

A group of competitors at the starting point.

Exeter and District M.C.C.

A reliability trial was held last week-end over a circular course. Competitors had to ride at a schedule of 20 m.p.h. from Exeter to Minehead, 15 m.p.h. Minehead to Barnstaple, and 20 m.p.h. Barnstaple to Exeter. The competitors were checked at Minehead, at Lynton, and at Barnstaple at the Golden Lion Hotel, and again at Exeter. Result: 1, P. Pike (3½ h.p. Humber, two-speed); 2, A. M. C. Scott (3½ h.p. Rudge); 3, T. H. Birdsall (2½ h.p. Moto-Reve). There were fourteen starters. This is believed to be the first reliability trial to include Porlock, Countisbury, and Lynton Hills.

Otago (New Zealand) M.C.C.

The hill-climb on the North of the Kilmog Hill a few weeks ago resulted in some excellent performances. Owing to the difficulty of timing over such a long hill, competitors ran in pairs, the winners meeting each other in the final. Results: Singles (private owners)—McDougal (3½ h.p. Triumph) beat McDonald (3½ h.p. Norton). Singles (trade)—Gray (3½ h.p. Norton) beat Maddox (3½ h.p. Triumph). Twins (open)—Dickson (5 h.p. Indian) beat Wimpenny (Douglas).

The Motor Cycling Club.

In consequence of the interest excited by the Collier v. de Rosier match, the annual petrol consumption trial has been postponed until Saturday, July 29th. Entries will now be accepted until Monday, July 24th, by the trial hon. sec., L. Vedy, Breydon, Buckingham Road, South Woodford.

For August Bank Holiday a novel form of competition has been arranged in the form of a tour to Barnstaple and back via Minehead, Lynmouth, and Parracombe, with two brake tests and a hill-climb on the outward and two hill-climbs and one brake test on the return journey. Competitors completing both journeys in twelve hours will qualify for a gold medal, and Mrs. Charles Jarrott and E. H. Huil will give first and second prizes for the brake tests and hill-climbs. Full particulars may be obtained from E. Gwynne, White Lodge, Crediton Road, West Hampstead, N.W.

AMONG THE ACCESSORIES.

Messrs. the Bowen and Odery Manufacturing Co., Sentinel Works, 62, New Cross Road, S.E., have recently placed on the market several new and practical accessories, which when described will not fail to interest our readers.

The Sentinel generator is a splendid piece of work. Its exterior is smooth, and as free as possible from projections, and is in consequence easy to clean. It is composed of three brass spinings, while the water compartment is strengthened by the central tube, which prevents any strain on the main joint of the feed pipe, which might be caused by an accident or rough treatment.

On referring to the sectional illustration, the central strengthening tube will be seen, through which the water valve rod runs. This rod has a screw thread cut at the top instead of at the bottom, so that the joint at the upper part of the generator is water-tight. The water is fed through a long hole of small diameter, in which a wire closely fits, thereby ensuring a steady drip. The gas pipe shown at the side is of ample bore, and is consequently unlikely to become stopped up. The central filler tube of the container is drilled throughout its entire height, thus allowing the water always to

A well-designed generator.

attack new carbide. No felt filters are used anywhere, as the generator is specially designed not to clog up, and apparently does not.

Yet another feature, which is illustrated separately, is the water tank filler cap, which is ingeniously made so as to prevent splashing, and this it does most effectively. The capacity is $\frac{1}{2}$ lb. of carbide, and a seven hours' light is claimed to be given. The clip is of neat and simple design, and is heavily plated on copper.

Next to the generator, the new Sentinel lamp deserves attention. In the first place, the excellent adjustable swing bracket is a splendid fitting. The wing nuts with springs and washer fall into a recess in a fork at the end of the bracket arms, and when screwed up the lamp remains firmly fixed in any position the rider desires, while they only need be loosened to allow the lamp to be removed completely. The lamp, it may be pointed out, is an entirely new model, and an exceedingly interesting point about its construction is that no rivet or solder is used, screws only being employed, so that the whole lamp may be taken apart or a damaged part replaced with a minimum amount of trouble. The particular type illustrated will, it may be seen, employ gas or electricity as an illuminant, while lamps may be had using either system.

A non-splash filler cap.

The burner or electric lamp holder is fixed in a slot, so that it may be focussed to suit the taste of the rider.

The Sentinel lamp for gas or electricity.

The mirror is of the Mangin type, and is of the best quality. The burner is screwed into an adjustable brass socket, which in turn is screwed into a hollow tube containing cotton-wool for filtering purposes, while the adapter on the burner allows it to be attached to the connection of any bicycle pump, so that it may be easily blown through.

Yet another simple and reliable device recently introduced by Messrs. Bowen and Odery is a magneto cut-out, which is illustrated herewith. It is strong and well made, has only one moving part, and is unlikely to get out of order. As stated in the makers' list, it is a smart, handy, and unobtrusive fitting for the handle-bar.

A neat handlebar switch.

Continental Tyre Success in the T.T. Races.

The Continental Tyre Co. are naturally jubilant over their success in the T.T. races. P. J. Evans's Humber and O. C. Godfrey's Indian were both fitted with Continental tyres, which gave no trouble of any kind.

Another New Exhaust Whistle.

Mande's Motor Mart, 136, Great Portland Street, W., and the Ser-292, High Holvice Co., Ltd., born, W.C., have both sent us a new exhaust whistle, which we illustrate. Among the advantages claimed for this road clearer are that it is not necessary to cut the exhaust pipe in two to fit it. All that is required is simply to cut a long slot in the pipe and insert the butterfly valve, clamping the whistle to the pipe by means of the brass band.

Change of Address.

Acer, Ltd., who specialise in cylinder grinding, have transferred their premises from Hanwell to Leabourne Works, Harrow. A revised price list is in course of preparation, and when ready will be sent post free on application.

German Reliability Trial.

About one hundred motor cyclists from all parts of Germany recently took part in a reliability trial. Each rider had to start from his own town with Naumburg as an objective. About fifteen or twenty only arrived, due to the bad weather. Two riders of 5 h.p. Rex de Luxe machines each completed a distance of 250 miles without any trouble. A hill-climbing competition which was to have followed the reliability trial was prohibited by the authorities.

Catalogues Received.

Alfred Noble and Co., Stoneleigh Works, Hill Street, Coventry, specialise in alterations to existing frames, building and redesigning frames and engines. The same firm also market a set of parts for constructing a 3 h.p. motor cycle engine.

We are in receipt of the latest catalogue of Messrs. Bransom and Kent, 40, Great Eastern Street, E.C. This is a large and voluminous publication, the contents of which are classified in a particularly convenient manner.

A Multiple Jet Adapter.

Among designers and manufacturers some doubt exists as to the superiority of a single or multiple jet for motor cycle carburettors. Messrs. Leader and Naughton, 1, Park Grove, Battersea Park Road, S.W., have introduced a detachable adapter which can be fitted over the jet of an ordinary carburetter so that motor cyclists may test for themselves which is the better. The adapter, which is simplicity itself, consists merely of a short piece of tubing with a conical top in which are drilled six fine holes through which the petrol from the single jet passes on its way to the engine, so breaking up the spirit into six fine columns. It is claimed that an increase of power is obtained owing to the homogeneous mixture it gives; also that a minimum of valve pitting occurs owing to complete and instantaneous combustion.

SOMETHING TO CROW ABOUT.

**THERE IS
NO DOUBT**

that to secure reliable and efficient service means reliable goods. These to be so must be well designed, skilfully made, and excellently finished, all qualities of which are embodied in the belt that has the always gripping, never slipping qualities—the

WATAWATA

BELT.

A belt that will enable you to obtain every ounce of power out of your engine without wastage of petrol and increase of running charges.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 14 words or less 1/6, and 1d. per word after. Each paragraph is charged separately. Name and address must be counted. In the case of Trade Advertisements a series of thirteen insertions is charged as twelve.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," Coventry, or London (20, Tudor Street, E.C.), by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should state distinctly under what heading and in what issue the announcement appeared.

CLASSIFICATION BY LOCALITY.

For the convenience of purchasers of second-hand motor cycles, the advertisements are classified into districts, as many readers like to know what machines are for sale in their immediate neighbourhood before going further afield.

Plan showing division of England into Sections.

Section I.
Northumberland, Cumberland, Durham, and Westmorland.

Section II.
York and Lancashire.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, 2d. will be charged for registration, and three stamped and addressed envelopes must be sent or forwarding replies. Only the number will appear in the advertisement. Replies should be addressed, "No. 300, c/o 'The Motor Cycle,' Coventry"; or if "London" is added to the address, then to the number given, c/o "The Motor Cycle," 20, Tudor Street, E.C.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but if not we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions exceeding £10 in value, a deposit fee of 2s. 6d. is charged, when under £10 the fee is 1s. All deposit matters are dealt with at Coventry, and cheques and money orders should be made payable to Ifife and Sons Limited.

SPECIAL NOTE

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR BICYCLES FOR SALE.

SECTION I.

Northumberland, Cumberland, Durham, and Westmorland.

1911 P. and M.'s and 1911 Bradburys, 2-speed, clutch, or standard models, for quick delivery.—Walkers.

1909 P. and M., £34; 1909 Triumph, £32; N.S.U. lightweight, £15; 5 1/2 h.p. twin Rex, £15; 4 h.p. Roc, clutch model, £20; all the above in order.—Walkers, Fishburn, Ferryhill.

6 h.p. Buchet and Sidecar; any trial; 26 guineas, or exchange smaller power.—Greenwood, Keswick.

1910 Standard Triumph, new condition, fast, guaranteed, faultless; £35.—T. Smith, Wooley Terrace, Drook.

2 1/2 h.p. Minerva, splendid traveller (guaranteed), ready for road; sacrifice £7/5, lowest.—Write, 221, Alice St., South Shields.

N.S.U., 1907, 5 1/2 h.p. twin, magneto, 2-speed, in good order; £25; exchange Triumph, Ariel, and cash.—Agar, Wombwell St., Spennymoor, Durham.

TRIUMPHS, Humbers, B.S.A., Royal Enfield motor cycles, lightweight, 2 speeds, free engines; write, wire, or phone for immediate deliveries.—Turrey and Co., The Motor House, Sunderland. Tel. No. 626.

3 1/2 h.p. Triumph, Roc 2-speed gear and free engine, 1911, practically new, with Millford casting steering sidecar; owner just bought, but is now going in for a car; what offers?—B., c/o Turrey and Co., Motor Garage, Sunderland.

3 1/2 h.p. 1910 Triumph, only ridden 950 miles, practically no worse than new; for quick sale accept £35.—Turrey and Co., Motor Garage, Sunderland.

N.S.U., 3 1/2 h.p., 1909, spring forks, magneto, handlebar control, new Continental and tubes, spares, splendid running order (in daily use); first cheque £24/10.—Mack, 57, Leafeld Rd., Darlington.

1911 New Speed Model Bradbury, fitted with drop handle-bars, or raised, £48, first cheque secures; 1910 Bradbury, fitted with 2-speed gear, only done 1,000 miles, quick sale £38.—Lockerbie, cycle and motor factors, Carlisle.

SECTION II.

York and Lancashire.

WOLF, 1910, 2 h.p., A.J.S. engine, new tyres; £23.—26, Emerson St., Wast.

1909 3 1/2 h.p. Triumph, good condition, standard model; £29.—7a, Bradford St. W., Bolton.

1911 3 1/2 h.p. Bradbury, condition as new, not run 1,000 miles; £43.—Rudd, Leadon, Yorks.

V.S., 5 h.p., Roc 2-speed gear, just re-enamelled, plated, and overhauled, very fast; £32.—Below.

REX, 1908, 5 h.p., in splendid condition, stand, carrier, etc.; bargain, £25.—Below.

REX, 1908, 3 1/2 h.p., just re-enamelled, plated, and overhauled, fine machine; cheap, £24.—Stanley Motor Garage, Westbrook St., Bolton.

HUMBER, 3 1/2 h.p., 1910, free engine, 2 speed; £33.—Aynsough, Beaufort St., Nelson, Lancs.

In answering these advertisements it is desirable to mention "The Motor Cycle."

2,000 MILES

— FOR —

TOTAL 6/6 COST

This is what is possible from a STANDARD "FLASH" TYPE

HELLESEN DRY BATTERY.

Numbers of riders obtain this mileage—you can do the same. Write us and we will give you every assistance.

C. Why pay more for Accumulators and have the additional worry and expense in continually charging them?

AA COILS

are the most efficient Coils on the market, for the simple reason that they are specially manufactured for use with Dry Batteries which necessitates a low current consumption to obtain the maximum mileage.

FIG. 3.

PRICE 13/6

NEW TYPE **AA** ALL METAL

HANDLE-BAR SWITCH.

1-WAY 2/3

2-WAY. 2/9

New model now ready with improved action. The large number sold enables us to fix the price as before.

250, Stafford Street, Walsall.

SIDECAR COMBINATIONS.

6 h.p. Twin N.S.U., 1911, new 18th March, 1/2 spring fork, automatic carburettor, 2-speed free engine, new Palmer back, Continental, fr. hermetic-tyre sidecar—£47; any trial—W.C.W., Ashdown Rd., Worthing.

19 10 5 h.p. Rex de Luxe, 2 speeds, new Druid 1/2 just fitted, tyres perfect, ins. Whittle belt, usual spares, together with rigid sidecar, the whole in good condition; trial run willingly arranged; £32.—Worrall, Uplands, Brentwood.

MATCHLESS. 8 h.p., 1911, and sidecar, deliver March, twin belts, cost with accessories £12. Cowey speedometer, perfect condition; any trial; 5/12, tubes, tools; accept £77/10; owner buying car.—Turner, 5, Princes Gate West, Liverpool.

4 h.p. Scout and Sidecar, splendid running order, bushed throughout, and new timing gear last Ma Watawata, spare new Dermatine, fast, excellent clim spares; sacrifice £14; would exchange lightweight.—Moor, 8, Broadway, Addiscombe, Croydon.

19 10 Rex de Luxe, 2 speeds, free engine, Whit cantilever, trip recorder, lamp, etc., and Mills-Pulford sidecar, tyres as new, all in perfect order; trial appointment, 40 guineas; also portable shed for sale £4; owner buying car.—Clark, Harden House, Waverley Rd., Enfield.

TANDEM.

4 h.p. Roc, 2-speed, tandem bicycle, bucket seats, 20 from ground, see description, "Motor Cyclist" March 14th; £26.—Hass, 11, Dod St., E.

MOTOR TRICYCLES AND
RUNABOUTS.

6 h.p. Runabout, convertible to tri-car, excellent condition; first reasonable offer accepted; room wanted.—Liddendale, Weeping Cross, Stafford.

GLORIA Sidecar, run about 500 miles only; cost £16/16 will accept £12, or very near offer.—1, 955, The Motor Cycle Offices, Coventry.

5 h.p. Sociable Runabout, good condition, complete with accessories; photograph in "The Motor Cycle" June 15th; £30.—Rowley, furnisher, Skegness.

3 h.p. Tricycle, water-cooled, and Whippet trailer, L. gnomare carburettor, perfect condition; £27; m. ell.—Toothill, tobaccoist, Duke St., Park, Sheffield.

FOR Sale, cheap, or exchange, 2-seater wheel steer three-wheel runabout, tyres almost new, 2 speed spare tyre, minus engine, or with engine; photo & particulars.—A. Moyse, Kessingland.

19 11 Morgan Runabout, 8 h.p., J.A.P. engine, speeds and free engine, Bosch magneto, Dunlop tyres; cost £80 two months ago, accept £60; owner buying car.—Apply, 42, Duke St., Norwich.

BEAUTIFUL Little Fafnir Racing Runabout, 8 h.p., magneto, 2-cyl., 3 speeds and reverse, water, Cape hood, electric lamps, every refinement, business reverses reason for selling; practically new; can or part exchange for 1910 or 1911 N.S.U. or Triumph 27a, Clifton Hill, Brighton.

GENTS Tricycle, maker, Hobarth, London, in excellent condition, can alter to fix or free wheel, necessity, tyres good condition, had very little wear, cost £27 when new; will take £7, or near offer, a good bargain; gentleman confined to bed no more use for.—H. E. Ashdown, Runnymede, Willington Road, Hounslow, S.

QUADCARS.

TWO Small Chassis, with wheels and steering gear suitable for runabout; £10 each.—Porter, build Tottenham.

PHENIX Quadcar, 8 h.p., seats side by side, Bosch magneto, 2 speeds, reverse, in good order; trial £50.—Nadin, Haultwhistle.

PHENIX Quadcar, 7 h.p., Fafnir, water-cooled, magneto, splendid condition; 30 guineas, exchange 1/2 mph or Bradbury.—Gealy, Tumble, Llanelly, Wales.

CARS FOR SALE.

WE Have to dispose of the following cars, all of which are in excellent running order:

6 h.p. Minervette, 2-seater, lamps; £27/10.

6 h.p. De Dion-Swift, 2-seater, excellent running order; £15.—Below.

5 h.p. Renault, 3 and reverse, nearly new grooved Dunlop; £20.—Below.

7 h.p. Panhard, 4 speeds and reverse, hood and screen, Stepney, lamps; £45.

8 h.p. De Dion (genuine), 3 speeds and reverse, expanding clutches, detachable tonneau; £50.

8 h.p. Speedwell, hood and screen, spares, and lamps, tyres in very good condition; £40.

16 22 h.p. Dennis Limousine, Aster engine, worm drive, extremely silent and good appearance; £95 Sully and Co., 10, Old Town, Clapham. Phone Batter 1781.

ARGYLL Car, 6 h.p., good condition; trial; £22/1 quick sale.—14, Upper Kennington Lane.

6 h.p. De Dion, Model Q, Stepney, lamps, and accessories; offers?—David, 2, Cromwell Rd., Rugby.

A Surfeit of Six Days' Records.

THE number of riders who are attempting to cover the greatest possible distance in six days continues to increase, and there is a fresh aspirant to fame practically every week. When the A.C.U. announced its decision to suspend all riders who exceeded the legal limit of speed in connection with road records, we made it particularly clear that we concurred with the Union's desire to prevent any excess of the limits prescribed by law and reason. Suspension, however, does not seem to have had the slightest effect, and the nature of the attempts is becoming almost farcical. We fail to see that anyone can prove that such records are of any benefit to the pastime, because were it necessary to demonstrate that a machine would run six days without being fitted with new parts, it would be more sensible to employ a relay of riders to ride the machine until it would run no further either owing to failure of some part of the mechanism or to destruction of the tyres. Every motor cyclist, and practically every prospective motor cyclist, knows that, with ordinary running repairs to tyres and relays of riders, a good make of motor cycle is capable of a continuously higher speed than has been accomplished in one of these six days' records.

It is, therefore, more a trial of the man than the machine, and has developed into a physical endurance contest which is illegal. In addition the checking is becoming more difficult, and not enough precautions are being taken to check the actual mileage covered.

Another phase of the movement is that we have six days' lightweight records, and it is very uncertain where to draw the line between light, medium, and heavy weights. In the absence of any control over those riders who wish to attempt these feats of endurance,

we sincerely trust that manufacturers and accessory dealers will consider the best interests of the pastime and refrain from assisting riders who may be contemplating further onslaughts.

Looking Ahead.

IT may seem very early indeed to talk about regulations for the 1912 Tourist Trophy Races, but if we are to see this contest held again another year it would be distinctly advantageous, particularly to the manufacturers of the machines, if the Competitions Committee of the A.C.U. could meet as early as possible and settle the lines upon which the races are to be run. It is evident that it would greatly assist the industry if the 1912 T.T. models could be exhibited at the Show in November. All the lessons we are likely to learn from the 1911 races have been duly absorbed, and there is really no reason why there should be any delay in announcing the regulations for another year. The all-important questions seem to be—(1) Are we to level up the singles with the twins of 585 c.c., (2) or further cut down the twins to the 500 c.c. single-cylinder standard, or (3) shall the difference be settled by mutual concessions?

The T.T. machine is, with modifications, usually the touring mount of the following year. Why not be still further advanced and exhibit the 1912 touring and racing mounts together? While on this subject various suggestions have been made for lessening, if possible, the danger of racing at high speeds on a twisty course. The suggestion to limit the speed and develop the contest into a high-speed reliability trial is a distinctly good one. We further suggest the adoption of a formula taking into account weight of the machine and rider, speed, and cylinder capacity.

THE QUESTION OF WATER COOLING.

STRAWS, we are told, show how the wind blows, and on these premises one may argue that since the Green and Rex Companies have been experimenting with water-cooled single-cylinder engines there is a tendency for motor cycle manufacturers to think seriously about using this method of cooling. It is a question, however, whether this is a step in the right direction, and, to see if this be so, it is perhaps as well to contrast the advantages of the system with the disadvantages. In a motor cycle the former are few. First and foremost comes the fact that water cooling allows a higher compression ratio to be used, and, therefore, there is the distinct probability of the efficiency of the engine being increased. Secondly, the fact that there is a volume of water and two thicknesses of metal between the explosion and the air slightly reduces the noise made by the engine. Thirdly, the fact that the valve chest is kept at a reasonable temperature results in long life to the valves and seatings, and most undoubtedly obviates the risk of the exhaust valve lengthening to any appreciable extent. Fourthly, the overheating bugbear is exorcised. Fifthly, carbonisation is very largely reduced, and, sixthly, owing to the absence of carbon deposits and the comparatively low temperature of the engine, "konking" is practically avoided.

Disadvantages of Water Cooling.

On the other hand, here are some of the disadvantages: First, extra complication; second, extra cost; third, increased weight; fourth, increased liability to damage; fifth, possibility of cylinder jackets bursting in winter.

With regard to the weight question. This in the ordinary type of machine is evidently an important one, as if the thermo-syphon system of cooling be employed it means that the radiator and tank must be placed somewhat high, and the result is a decided liability for the machine to be top heavy. In the cases of the Green engine and the Scott the same remark scarcely applies, as topheaviness is avoided in the first case by carrying the bulk of the water on a level with the engine, and in the second by placing the engine low down in the frame.

The risk of burst jackets is, I confess, not a very large one, yet still worthy of consideration, but it cannot be denied that with a small engine and with a small volume of water the liability to freeze is very much greater than with the ordinary car engine.

During the past winter I was using a water-cooled machine, and cannot but testify that it was decidedly a nuisance to have to empty the radiator and jackets when there was any likelihood of frost occurring during the night.

The Improved Conditions when Water Cooled.

Of the advantages I consider the fact that the valves work under much better conditions to be probably the greatest. The increase of efficiency made possible by the use of a high compression is a rather more questionable one, as high compression in a single-cylinder engine is all against smooth running at low speeds. This fact does not, of course, apply to the Scott engine, which for all practical purposes is a

four-cylinder one, and hence the high compression does not make itself felt in any disagreeable manner. On the other hand, there is just the possibility that a water-cooled engine may run too cool, and it is a well-known fact that when running below a certain temperature an explosion engine loses considerably in efficiency. The generally accepted axiom is in fact that the hotter the engine can be run the better it is, but, of course, there is a limit which it is inadvisable to pass. There is no masking the advantage of a water-cooled engine when a two or three-speed gear is used, but it is open to argument whether in the hands of a moderately careful rider it is capable of giving any better results than a well designed air-cooled engine.

Risk of Damage in Case of a Fall.

As to the risk of doing damage to the radiator, this is a point that cannot be overlooked, as spills with motor cycles are not at all infrequent, and if the radiator become damaged to any extent, as is likely, even in the event of a mere side-slip, it is a matter which, besides running the owner into a fairly high bill for repairs, will probably result in his having to ride home by train.

If the machine be designed purely and simply for sidecar work the question assumes rather a different aspect, as in the hands of a novice it is undeniable that a water-cooled engine with a two or three-speed gear would give better results in the long run than an air-cooled one, but for single-cylinder solo work I look upon water cooling as a refinement pure and simple, and it cannot, after one has seen what the air-cooled engine can do, be regarded as a paramount necessity.

ELDORADO.

THE INTERNATIONAL MATCH—ENGLAND v. AMERICA.

Collier v. de Rosier. This photograph gives a good idea of how the two champions kept close together throughout the whole series except when one or other suffered a stop.

An Experience of the Lightweight Humber.

IT is now some weeks since Mr. H. L. Davey invited us to test the capabilities of the 2 h.p. lightweight Humber, an invitation we were not slow to accept. We are now in a position to relate our experiences and opinions, and can do so more confidently after being privileged to give the machine an extended test in its everyday life, so to speak. By this we mean that our trial has not been confined to a single spin on a machine specially tuned for the occasion, but rather to the only reliable guide to a prospective buyer—frequent runs day in and day out. First of all, we may recapitulate the mechanical features of this interesting little machine, and in doing so we should like to impress the reader that this entirely British production is no copy; indeed, careful study of its design would lead one to the opinion that it is the most original machine on the market.

The offset cylinder of the Humber. The dotted vertical line shows the extent of the offsetting.

An Offset Cylinder Explained.

The principal departure from standard practice is the offset or *décalé* crankshaft—the Humber being the only British built motor cycle engine embodying this feature. In the first illustration a vertical line has been produced through the centre of the crankshaft, and it will be observed that it does not coincide with the vertical centre line of the cylinder or gudgeon pin. This practice, which is common to cars, and we believe first standardised by the Brasier Co., is based on the theory that this relative disposition of the cylinder and crankshaft enables the connecting rod to exert a more direct thrust on the crank pin during the firing stroke, thus eliminating, or, at any rate, considerably reducing, the side pressure of the piston on the cylinder wall. By this arrangement the in-

ternal friction or negative work of the engine is reduced to a minimum, and the utmost efficiency being essential in the case of a lilliputian engine such as the Humber, we must commend the makers

2 h.p. m.o.i.v. Humber lightweight engine, magneto and parts.

for their enterprise in thus leading the way. It is claimed that an engine with offset cylinder is (1) more powerful, (2) runs more smoothly than the more orthodox type, and (3) gives more rapid acceleration. It says much for the mechanical efficiency of the engine when we assure readers that the little 60 x 70 mm.

Footbrake mounted on left footrest.

Humber, geared 6 to 1, has without pedal assistance frequently carried an 11½ stone rider up Stoneleigh Hill, Warwickshire, with its gradient of 1 in 9.

A Spark Lever Suggested.

The engine runs very smoothly, and, above all, silently. It has a wonderful pick-up for its size, though we must admit that knocking has manifested itself on several occasions due to the fixed ignition. We are strongly of opinion that an advance spark lever would mitigate this trouble to a large extent. At first we were troubled with the belt fastener pulling through, which happened every 150 miles. We came to the conclusion that it was due to disintegration of the

canvas strands of the belt caused by the belt passing over the small contour of the engine pulley. After raising the gear ratio from 7 to 6 to 1 by means of the adjustable pulley, our trouble in this direction disappeared.

The Well Proportioned Parts.

The design of every part of the lightweight Humber, however minute, is in keeping with the special features of the machine. The tiny petrol taps, the baby B. and B. carburetter, the light foot brake and handle-bar levers, the smallest sized magneto, all go to make a pleasing *tout ensemble*; in fact, it is a 3½ h.p. standard pattern machine in miniature. For town work the little Humber would be hard to beat on account of its ease of starting and general handiness. It is an exceedingly popular machine for running down to tennis courts or golf links, and we have constantly used our machine for that purpose, and never once has it failed us. As regards speed, this brave little 2 h.p. has surprised many a motor cyclist, for thirty-three miles per hour is understating its powers.

Foot brake shoe acting on belt rim.

Altogether, the machine is well fitted up, has a finish that is exceedingly good, and is highly to be recommended for beginners. A number of tyros have sampled the running of our machine, and two we know were soon afterwards writing cheques to Humber, Ltd. By the way, we had almost forgotten to mention its wonderful economy, which is excusable to some extent when we mention that the engine runs on a mere "whiff" of petrol, and one seldom has recourse to the garage. Further, tyre troubles are practically non-existent. Our machine has Palmers—a fact which may account for the makers' apparent belief that a repair outfit for the toolbag would be superfluous. The Humber is not an engine of the kind which gums up every time it is left to cool down. It always seems free, and seldom if ever refuses to start at the first push of the pedals.

Method of supporting the engine, also showing magneto platform cast in one with the crank case.

The silencer which has aluminium end plates and a single outlet for burnt gases.

TWO NEW CHANGE-SPEED GEARS.

A Three-speed Hub Gear.

NOW that so much enthusiasm has been raised regarding change-speed gears by the success of these devices in the Manx races, a description of a three-speed hub gear designed by a Coventry engineer, Mr. J. W. Player, 57, Old Allesley Road, will be of more than usual interest.

The gear provides three separate ratios, the middle one being direct. A single sun pinion A and a set of planet pinions B are used, supported on each side

Player's Three-speed Hub Gear.

- | | | |
|--|--------------------------|---|
| A. Sun pinion. | E. Hub shell. | O.P. Dog clutches for locking sun pinion. |
| B. Planet pinion. | F. Clutch ring. | Q. Thrust bearings. |

| D1. Internally toothed ring on driving sleeve. | L. Belt rim hub. | U. Chain stays. |
| | M. Clutch lever. | V. Fork ends. |
| | N. Gear operating lever. | |

by a planet carrier B1, but two internally toothed rings are employed, one being the driving and the other the driven member. The planet pinion carriers have teeth on their peripheries which can be engaged with the internally toothed rings by the sliding of the gear members. The sun pinion can also be locked to the spindle by the dog clutches O.P. when in each of its extreme positions. As shown, the gear members are in central position which gives a direct ratio; the planet pinions being in mesh with both internally toothed rings. The low gear is obtained by moving the gear

members to the right by means of the gear lever N and the rod working up the hollow spindle to which the gear members are attached. This locks the sun pinion; the planet pinions are in engagement only with the internally toothed ring on the driving sleeve D1, but the left pinion carrier remains in mesh with the internally toothed ring D of the hub. This causes the hub to revolve at a slower speed than the driving sleeve. The high gear is obtained by moving the gear members to the extreme left; this leaves the right-hand planet pinion carrier in mesh with the internally toothed ring on the driving sleeve whilst the planet pinions are engaged with the internally toothed ring on the hub shell. This causes the hub to revolve at a faster speed than the driving sleeve. To enable the gear changes to be made readily the driving sleeve is frictionally connected to the belt rim hub L by the clutch rings F operated by the lever M, and to avoid any chance of damaging the gear teeth the changing and clutch operating mechanisms are so connected that the clutch is always disengaged before gear changing takes place.

The Matador Variable-speed Gear.

Still another variable pulley gear in which both pulley grooves expand and contract has been brought to our notice by Mr. M. H. Thompson, of 2, Crowhurst Road, Brixton, S.W. It has been designed by Mr. H. Houlding, of Preston, who recently demonstrated to us the effectiveness of his gear. A wide range of ratios are obtainable, from 3 to 1 to 11 to 1, a further movement giving a free engine. The outer flange of the engine pulley is worked by a coarse-pitch thread, and slides on four keys formed on the shaft of the inner flange. The opening and closing of the rear pulley flange is controlled by four double screws and four keys, the keys being fixed between the screws. The inner flange is secured to the spokes. The sectional drawing, which will be found reproduced on the next page, illustrates the method of controlling the movable flanges. By moving the operating lever, pedal, etc., the two levers attached to the engine pulley (which are interconnected with two on the screw box of the back wheel) are brought into action. The movement of the screw box causes the shaft which runs through the hollow spindle of the back wheel to be pushed in or drawn out, thus actuating the lever X, which sets in motion the levers attached by connecting rods to the four double screws.

An adjustable nut is mounted on the bar A, so that, should the belt stretch, it is possible to take up the slackness without cutting the belt.

It is possible to use the engine pulley as a variable pulley or the belt rim in conjunction with any existing adjustable pulley.

The gear has been tested in London traffic, and afterwards with a sidecar and 11 stone passenger from Coventry to Preston on a 3½ h.p. Jap-Moveo. The original model, which we inspected and tried, was certainly much heavier than it need be, but that is more a question of standardisation. Seated in the sidecar, we were restarted twice from a standstill with very little effort on the part of the engine on a gradient of 1 in 12. In traffic the low gear ratios were a decided advantage.

Sectional drawings of the Matador variable gear described on previous page.

A Conversion and How it was Effected.

TO convince a male pedal cyclist of the joys of motor cycle riding is no difficult matter in these days of perfected machines. But the other day I determined to try a bold experiment. I chose as my subject a young lady of twenty-three, who loved riding in a luxurious motor car, who hated pedal cycling, and was in every sense the last person in the world to whom one would imagine motor cycle riding would appeal. The young lady in question, who, by the way, is my niece, is one of a nervous family, and at first I was somewhat diffident in broaching the subject to her. However, I did so, and she agreed to take the plunge if I thought she could manage it. I confess I doubted, but having so far committed myself, I had to say I thought she would. So far so good.

The next thing was to get hold of a suitable mount, so in my trouble I turned to Mr. O. L. de Lissa, who proved to be a friend in need, and kindly placed two Motosacoche at my disposal, one for my niece and the other for myself. Not only did he do so, but persuaded his wife to bring the machine to a secluded road and give that valuable instruction which in cases like this is so welcome.

Eventually on one glorious May afternoon we met at the appointed rendezvous, the lady's machine was jacked up on its stand, and Theodora, who knew not the carburetter from the magneto, was told to seat herself in the saddle. "This thing," said Mrs. de Lissa, pointing to the exhaust lifter, "is what you hold up when you want to start; you let it go after pedalling a little way, and pull it up when you want to stop."

The Knack of Starting Overcome.

Theodora said she understood, but she really didn't, and started to pedal. She dropped the lever, which Mrs. de Lissa had been careful to call a "thing," with the result that the other thing stopped her dainty feet from going round, and nothing happened.

Naturally she lacked the knack of starting a magneto machine, but on the third attempt the engine fired, and maintained that gentle teuf-teuf so peculiar to the Motosacoche. Theodora then obediently pulled up the first-mentioned thing, and let it go again several times, so as to be quite sure, as her mother had been careful to tell her, to know how to stop.

She started the engine on the stand two or three times, and managed quite well, when Mrs. de Lissa showed her that other "thing" (the throttle lever),

which made it go fast or slowly. This she experimented with, and at last felt confident enough to start on the road.

Now Theodora has just gained a "first aid" certificate, and though she has never had a case, I veritably believe she thought she would herself be the first person on whom her skill would have to be expended before the journey was over. But after a push off she started, and in a few minutes she was playing with the levers, going fast or slow at will, and passing motor cars and horse-drawn carriages as though she had long been used to motor cycle riding. About a couple of miles had been covered, and the first hill (quite a decent one) had been negotiated without a touch of the pedals—a fact which speaks volumes for the behaviour of the Motosacoche in the hands of an utter novice.

I had made a convert, who is now an enthusiast longing for a motor cycle of her own. The only difficulty the pupil experienced was that of starting—a difficulty which on a Motosacoche is in reality non-existent, and to prove this Mrs. de Lissa several times mounted and started with ease, even on an up-grade, just to show how easily it could be done. It is merely a knack.

I myself followed on one of the 1911 2½ h.p. Motosacoche, which pleased me greatly. AILETTE.

The only lady motor cyclist in or near Pickering—Mrs. Wright, who rides a 2½ h.p. twin N.S.U. Her mount is capable of ascending all ordinary hills. Mr. Wright's machine is a M.R.

THE ADVANTAGES OF TOURING ABROAD

COMPARED WITH A HOLIDAY IN ENGLAND.

HAVING left my motor bicycle one day in a provincial garage, the proprietor asked me when I returned the meaning of the letters "G.B." that were fixed on to the back mudguard. He told me that three or four young men had been arguing about it. "What's that," said one. "I don't know," said another. "Do you know?" "Not the vaguest idea." "Oh, you idiots," chimed in another, "don't you know they stand for Gordon-Bennett?" "Of course they don't mean that, but are for use abroad, and stand for Great Britain." This brings me to my point, viz., touring abroad. Having myself once embarked on a Continental tour, I am bound to say that the contemplation of another tour will always take my thoughts first of all abroad. No, it's not patriotic perhaps, but one goes touring not for patriotic reasons, but for pleasure.

The Boredom of an English Tour.

After a couple of tours in England it gets rather tame, the general scenery is nearly always the same, and in a very short time one can see all of the best known beauty spots, and then, perhaps, there is a long ride through dull, uninteresting country to the next place. At nights when we put up at Cokeville, in Mudshire, our chief aim and object in life is to leave it as soon as possible. In most ordinary country towns there is nothing to see, nothing picturesque, nothing of interest, and for the most part everything is deadly dull. Then, again, Sunday is always rather a difficulty. How different it all is abroad; as soon as we land we come into contact with new customs, new faces, new languages—in fact, everything is entirely changed. When one is on a steamer and enters an English port one is interested in it as a whole, the dock porters are scarcely noticed, the railway officials in their dark uniforms are not very different from the Customs officers who presently will try their luck with our baggage. How different on entering a foreign port. French say. You go up on deck and watch everything with a very different kind of interest; first the quaint blue-bloused porters attract your attention, then some swaggering Customs officer with blue uniform and an enormous cloak. Next you are staring with awe at some fierce and mighty under-chief stationmaster in gorgeous uniform. Then, after having successfully emerged from the Customs, you start off into the town; everything is so different, old-fashioned buildings meet you at every turn, even a common or garden tramcar comes in for its share of attention. In England you would drop into an inn and ask for a glass of beer almost without noticing it—the dropping in I mean, not the beer—abroad it is a novel experience in itself. You've first got to try and make the proprietor understand you, and then you've got to try and not get swindled over the cost or the change. Then, again, in England in the open country you spin along without looking at the country, while abroad everything attracts your attention, every turn of the road opens up something fresh; every peasant is well stared at, and if perchance you meet an ox-drawn cart your first thought is probably to photograph it.

More Sources of Amusement Abroad.

When in England you arrived at Cokeville during the afternoon you never thought of going out to see the sights, simply because there were none, but in any French town, however small, there is always something of interest—perhaps a *château*, possibly a cathedral, or a fine church, or at least a certain amount of amusement and enjoyment can be obtained by walking through the streets and studying the people, and there are sure to be several little narrow side streets that will well repay a visit.

It is never dull. I remember once at Rouen having quite a crowd round me, while I was trying to persuade the waiter at a café that a bottle of wine would not only fill my flask but leave me a glass or so over. Then, again, if you chance upon another Englishman quite complacent about the perfection of his French and his accent, who also takes every opportunity of airing it, you will be sure to get some fun. The reader may have seen in *Punch* a short time ago the picture of the English lady on a steamer about to leave France, who, wishing to air her French, shouted to her children, who were still on the quayside, "*Mes enfants, prenez garde ne pas être gauche derrière.*" Such priceless gems can really be picked up sometimes. I don't know whether a foreign tour is actually more interesting, but the fact remains that in a foreign town one finds it hard to see all that there is to be seen in the time at disposal.

The Actual £ s. d. of a Foreign Tour.

The actual touring portion will be found to be much cheaper than in England, the hotels are far better in every way, and food is much cheaper. I am not, of course, referring to the large palatial hotels, but to those that the average motor cyclist is likely to patronise—the average fourth or fifth class hotel mentioned in the Michelin guide book, a book, by the way, no tourist should be without. Hence, money for money, I consider that better value can be obtained abroad. "What about the Channel crossing?" someone will say; "you can't do that on nothing." True, but it will be found that, as a rule, the longer the sea passage taken, the cheaper proportionately is the fare, and there is no need to travel first-class. But there are more ways of killing a cat than by drowning it, so there are more ways of crossing the Channel than in the usual steam packets belonging to the various railway companies. If an intending tourist take the trouble to find out, there are several lines of steamboats, from London and elsewhere, to the Continent which will take him and his machine at very low rates indeed, but he must not grumble if they are not as comfortable as the *Lusitania*. The enterprise of our motor and cycling clubs have made it so easy to go abroad nowadays; nearly all the bother formerly met with from the customs being eliminated, it is really worth while to give the Continent a serious thought when the next holiday tour is under consideration. Do not try to do too much—eighty miles per day is quite enough, and should be covered in the morning for preference, leaving the afternoon for sight-seeing, etc. Take my tip and go—you will like it.

PETROLIA.

AMONG THE ACCESSORIES.

MOTOR cyclists must be hard to please if they find themselves nowadays unable to obtain just the little fitments and accessories they require. So apparently infinitely various are the devices and contrivances made for the motor cyclists' convenience that their manufacture may be regarded as quite an industry in itself. We recently had an opportunity of inspecting some of the many motor cycle accessories sold by A. H. Hunt, Ltd., of 117, Cannon Street, E.C., whose name is well-known in connection with the Hellenes dry cells, and we illustrate three of them.

A Spring Plug Terminal.

The first is a sparking plug terminal which should appeal to a large number of motor cyclists, as much by its neatness as by its universal adaptability. It will be seen that it comprises a vulcanite cover for the cable-joint, which screws on to a boss terminating in a spring

directions, so that the spring plug can be pushed into it in three different positions, and consequently the most suitable fixing can be made according to whether the high tension cable is attached to the plug from above, from below, or from the side.

A great many terminals fail under the strain which is imposed upon them by a long high tension cable, more especially when the cable is not brought in a direct line to the plug head. The fitting described avoids this entirely, and permits not only the strongest but the neatest wiring arrangement to be made. At the same time, it is extremely well-made, and looks quite well.

Of the two switches illustrated the first is of the change-over two-way variety, and has a body of ebonite. The three contacts are on the upper face of the body, and are let into it almost flush. The middle one is connected up through the contact spring to the terminal attached to the thumb-piece, whilst the other two communicate with screw terminals at either side of the switch.

A Switch with Screw Interrupter.

The second switch is of a somewhat similar sort to the last, and has also a

vulcanite body, but is only of the single way type. The knurled thumb-nut in the pivot on which the thumb-piece turns is an interrupter which when screwed down makes contact to earth through the metal of the handle-bar which is directly underneath it; a half turn of the nut is sufficient to interrupt the current, and it is, therefore, unnecessary to carry about a separate interrupter plug—which nearly always gets lost.

The above firm's latest catalogue is just to hand, and a copy will be gladly supplied to any reader on application. The latest type of Hellenes dry battery is tubular in shape and designed to fit on specially made clips, manufactured after the manner of pump clips, on to a convenient part of the frame of the machine. One of these clips forms the earth connection. The casing is of fibre and will not crack. The firm supply specially wound induction coils for use with their dry cells which consume a minimum of current. These should be specified in conjunction with a make and break contact maker. Another recent introduction by the firm is a 5in. grease injector for Douglas, and other machines fitted with change-speed gears.

Hunt's two way handle-bar switch.

A handlebar switch with screw interrupter.

A spring plug terminal sold by A. H. Hunt.

push-plug. The latter fits into, and holds itself secure in, a brass terminal which is permanently attached to the sparking plug. This terminal, besides having a central hole, is drilled across in two

HINTS AND TIPS FOR MOTOR CYCLISTS.

By ROAD RIDER.

ABSENCE OF COMPRESSION AFTER VALVE GRINDING.

357. It is not uncommon to hear a motor cyclist say that his compression totally disappears after he has ground in his valves, but that it reappears as mysteriously after the engine has run a few miles. Such phenomena are usually due to imperfect cleansing of the valve chest after grinding. Particles of carbon or, worse still, of the abrasive, are left on the valve seats, and prevent the valve sitting down tight to its work, and they often score the seating before they are blown out through the exhaust, and so nullify the labour spent on the grinding.

The orifices leading to the combustion chamber should always be plugged with wadding during grinding operations, and when they are finished the seating and valve chest should be most carefully mopped out with a damp rag and sluiced with paraffin. If the compression is poor when operations are complete the engine should not be run until the intruding particles have been found and removed.

RUSTY BELT SCREWS.

358. A machine came into my hands for repair the other day, and amongst other things I found the screws of the belt fastener rusted so

tightly home by a long spell of work in wet weather that it was all but impossible to shift them. I will therefore give directions to riders who may find themselves stranded with a like mishap when they are miles from anywhere, and the belt too slack to propel the machine any further without adjustment.

The best makeshift on the road is to raise the gear by means of the adjustable pulley. Struggles may only spoil the fastener, and perhaps another is not available. Failing this expedient, examine the slot in the screw heads. If this is in good order, and has not been burred by rough usage, sit down on the road with one leg on each side of the back wheel; leave the belt over both pulleys, and turn it till the joint lies in the rear pulley rim about level with the clip of the stand. Get out your longest screwdriver, put one hand on the inside of the rim to get a purchase, and screw with all your strength. If this will not shift the screw, deepen its slot by very gingerly filing it out with the edge of a fine file, such as is sold for the purpose of trimming platina.

If this method fails, you will have to cut the screw out with a cold chisel, or file the head square and turn it out with pincers or spanner. The latest types of fastener have screws with square heads for a spanner.

MAGNETO CONTACT BREAKER GAPS.

359. The manufacturers of magnetos wisely recommend a very small gap or break at the platinum points of the magneto, usually about $\frac{1}{32}$ in., but in actual practice a wide margin is permissible, and I have known magnetos fire satisfactorily with a gap nearly five times as wide. Nevertheless it pays to keep the break accurate. Too wide a break may have the effect of cutting out the ignition if the spark advance lever be used to its full range.

Stopping by the roadside recently, I could not persuade my engine to restart for a long time, and finally I found the adjustment of the fixed platinum on the magneto contact breaker had shaken loose, so that the gap was very wide on the break; but the engine fired perfectly except on the last three notches of ignition advance. Adjustment of the gap restored the full range of control.

It is better to adjust these points too closely rather than too widely, and some magnetos are very sensitive on the point. If no gauge is handy, use a slip of ordinary writing paper; see that it is nipped tight between the two platina in the "make" position, and that it just slips out freely in the "break" position.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All queries should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately for ease of reference. Letters containing legal queries should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Blowback from Carburetter.

My motor bicycle has an air-cooled engine, and, when running, it sprays back from the carburetter a little. Can you tell me if this is right, and how to remedy it?—R.

The blowback in question is caused by either the inlet valve closing late, in which case the piston has already begun to deliver a negative pressure along the inlet pipe, or by the sudden closing of the valve and the rebound of the mixture from the same. In the first case, it would be bad, and in the second also; but one can be cured by altering the timing of the valve, and the other by the fitting either of a long pipe from the extra air, or some description of funnel, which will prevent the waste petrol from leaving the carburetter.

Analysis of Petrol Combustion.

I want to know something about what might be called the physiology of the motor, that is, the mechanism of oxidation of petrol by the magneto spark. Do you look upon the spark as a heat-producing mechanic sufficiently potent to combust, or rather start the combustion of petrol? Or do you think that certain peroxides, such as ozone, are formed by the spark which materially alter the temperature at which petrol combustion takes place? Do you know of any published work that deals with the intermediate products of petrol combustion and their variation with increments in the air take?—S. R. WILLIAMS.

One would be inclined to look upon the ignition mechanism as a means of providing an intensely hot spark, which will ignite a rather variable mixture of atomised petrol and air, as the so-called gas in the cylinders is rather more composed of minute particles of petrol floating about in air than of gas. It is just possible there might be a minute trace of ozone, due to discharge, but we cannot remember any exhaust analysis which showed a trace of the same. Some time ago there was a paper read before the I.I.A.E., which dealt with the exhaust analysis of internal combustion engines. Doubtless, if you were to obtain a copy of this you would be able to see for yourself exactly what the products of combustion were, and you will find that there is a great deal more petrol than is generally supposed at certain speeds.

Accuracy of Valve Surfaces.

I bought a second-hand 3 h.p. bicycle a few months ago, and recently had occasion to replace the inlet valve (automatic). The compression was no better than when I used the old one, and so I again ground in the new one. I then thought the bad compression and loss of power might be due to exhaust valve, so ground that in, with the same result. Is it necessary that valve should hold petrol when ground in?—A.O.

We imagine that the trouble in question is entirely due to the strength of the springs on the valves. If you had a much stronger exhaust valve spring and a rather stronger one to the inlet you would find that all trouble would cease, provided the valve fitted perfectly on its seating. You can discover this by brushing the surface of the seat with red lead and then placing valve firmly on the seat, noticing what points on the valve are not touched with the lead.

Excessive Vibration.

My mount is a 3½ h.p. Peugeot, automatic valve (inlet), and B. and B. carburetter, magneto ignition. When on the road the engine gives jerky explosions (not misfiring), which cause excessive vibration, so much so that it has nearly broken the petrol pipe on two occasions. This happens when the throttle is about one-third open and the air lever about one-half open. If I close the throttle a little it reduces the vibration. I may say that the petrol seems to waste from the carburetter and overflows the lid of the float chamber round the needle. Does the needle want grinding; if so, how is it done, and will it not alter the petrol level?—A.B.J.

We think you will find that the grinding in of the float chamber needle would improve matters considerably. You can do this quite easily by removing the float chamber and placing a little extremely fine crocus or carborundum powder on the seating, and very carefully turning the needle round in exactly the same manner as when grinding in a valve. The needle, being delicate, should not be ground in over much, and if carefully done we do not think you will find there is any material alteration in the level of the spirit.

"Hunting."

When my machine attains a speed of 45 m.p.h. for some unknown reason it automatically cuts itself out, which I believe is commonly known as "hunting," and refuses to go any faster. I have fitted new valve springs and a new magneto contact breaker spring, and have also written the manufacturers on the subject, who advised me to clean the back of the contact breaker. I have done so, but there is absolutely no difference. Perhaps you may be able to throw some light on the subject?—T.C.B.

Your trouble seems to depend entirely on what strength of valve spring was fitted in place of the old one. When going very fast it is absolutely necessary to have an exceedingly powerful valve spring, otherwise when a certain critical speed is reached the valve begins to float, and a "cut out" effect is at once felt. It is just possible that the same effect might be caused by dirty or defective carbon brushes, and the renewal of these would clear you of your trouble.

L. E. Forster, of Warrington, with his 5 h.p. twin cylinder Rex. He covered a kilometre in the Douglas promenade speed trials at the rate of 61½ miles per hour.

SELECTION OF POPULAR
TOURING ROUTES.

"C.S." (Oxford).—Route from Oxford to Newport (Mon.) Your best route from Oxford would be—Faringdon, Lechlade, Cirencester, Malmesbury, Bristol, cross by the railway through the Severn Tunnel, Tunnel Junction, Newport.

"C.M.T." (Birmingham).—Route from Birmingham to Scarborough: Birmingham, Sutton-Coldfield, Lichfield, Burton, Derby, Mansfield, Worksop, Tickhill, Doncaster, Selby, York, Malton, Sherburn, Seamer, Scarborough. Distance, approximately 166½ miles.

"L.G." (Camden Town).—Route from London to Exeter and Newquay: London to Brentford and then proceed *via* Staines, Basingstoke, Whitchurch, Andover, Amesbury, Wincanton, Ilchester, Chard, Honiton, Exeter, Okehampton, Launceston, Bodmin, Newquay.

"A.W.B."—Route from Leeds to Torquay: Leeds, Doncaster, East Retford, Newark, Nottingham, Loughborough, Leicester, Lutterworth, Rugby, Leamington, Stratford-on-Avon, Evesham, Tewkesbury, Gloucester, Bristol, Axbridge, Taunton, Exeter, Chudleigh, Newton Abbot, Torquay. Care should be exercised with regard to police activity at Doncaster, East Retford, Glastonbury, Taunton, and near Bath.

"E.S.L." (Bodmin).—Route from Bodmin to Windermere and back through Llangollen and Gloucester: Bodmin, Launceston, Okehampton, Crediton, Tiverton, Taunton, Axbridge, Bristol, Gloucester, Tewkesbury, Worcester, Kidderminster, Bridgnorth, Wellington, Whitchurch, Chester, Warrington, Wigan, Preston, Lancaster, Kendal, Windermere. It would be extremely awkward

to avoid some of the towns and would take you considerably out of your route. Bristol is for some reasons preferable to Bath for traffic riding. Worcester, Lancaster, Whitchurch, and Chester present no difficulties, but Wigan can be avoided by proceeding *via* St. Helens and Ormskirk to Preston. Lancaster is quite easy. A good return route would be Preston, Ormskirk, Liverpool, across the ferry to Birkenhead, Chester, Wrexham, Llangollen, Oswestry, Welshpool, Montgomery, Ludlow, Leominster, Hereford,

Ross, Gloucester, Bristol, Axbridge, Bridgwater, Taunton, Bampton, South Molton, Barnstaple, Torrington, Holsworthy, Launceston, Bodmin. There is not very much difference in the distance. Approximately, the outward route is 404 miles, and the return journey would be about forty miles more.

"R.A.G." (West Hartlepool).—Route from Durham to Portsmouth: Durham, Darlington, Northallerton, Boroughbridge, Wetherby, Aberford, Knottingley, Doncaster, Bawtry, East Retford, Newark, Grantham, Stamford, Alconbury, Buckden, St. Neots, Bedford, Luton, St. Albans, Watford, Rickmansworth, Ickenham, Uxbridge, Colnbrook, Staines, Basingstoke, Winchester, Twyford, Bishops Cleeve, Wickham, Fareham, Cosham, Portsmouth. The distance is approximately 312 miles, and although somewhat more devious than could be set out, the roads are certainly the best.

"A.S.K." (Bristol).—Route from Bristol to Hull: Bristol, Thornbury Heath, Berkeley Road, Gloucester, Tewkesbury, Evesham, Stratford-on-Avon, Warwick, Coventry, Sharnford, Leicester, Loughborough, Nottingham, Radcliffe, Newark, Lincoln, Brigg, New Holland, then crossing the River Humber by boat to Hull, making the journey total up to 220 miles. An alternative route, which is 238 miles in length, not necessitating the crossing of the ferry, is the same as far as Nottingham, but branching off here, and going through Mansfield, Worksop, Tickhill, Doncaster, Selby, Howden, N. Cave, S. Cave to Hull.

"J.S.B."—Route from Northampton to Llandudno: Floore, Weedon, Daventry, Coventry, Stonebridge (turn right), Castle Bromwich, Brownhills St. Georges (turn left), Shrewsbury, Llangollen, Corwen, Bettws-y-Coed, Llanrwst, Llandudno. Approximate distance 177 miles.

EXPERIENCES WANTED.

"K.S.K." (Winchester). Roc two-speed conversion fitted to a Triumph.

SCATTERING THE DUST.

E. Goult (3½ h.p. Triumph) trying for fastest time in the Doncaster M.C.C. speed trial. This photograph is an object lesson in itself for the dust is not being churned up by speed alone, but owing to the fact that the owner arranged the exhaust gases to blow direct on to the ground—a trouble not unknown on standard pattern machines.

CLIPSTONE TRACK SPEED TRIALS OF THE NOTTINGHAM M.C.C.

J. Truman (5 h.p. Bat-Jap) and F. P. Johnson (5 h.p. Matchless-Jap) at full speed half way along the course in the twin-cylinder class, which was eventually won by F. P. Johnson.

Occasional Comments 'Lyon' by

Tackling Steep Hairpin Bends.

Some riders are not acquainted with the adjustment employed by experts for negotiating very acute bends on steep gradients, when the corner is so abrupt that the engine has to pull, and pull hard at very low speeds indeed. The usual plan is to obtain a very fierce suction at the carburetter jet, and so to provide the engine with plenty of rich mixture. The desired conditions cannot always be obtained by shutting the extra air, and hence crack climbers of the freak variety often partially obstruct the bottom air supply, either by using a liner in the choke tube, or by fitting a shutter to the main airholes.

For an occasional freak climb it will suffice to put wooden plugs in one or two of the airholes, or to stuff a drilled cork in the stub funnel of a B. and B. carburetter. But when a rider has frequently to negotiate one of these freak climbs, it will pay him to fit a permanent main air shutter, with a short lever to operate it. Personally, I consider that such a shutter is a desirable fitment on most machines. If the engine is obstinate in starting at any time, the chance of constricting the main air supply is very useful; and I often use one in starting my engine by pulling up the back wheel, or when I have to push off on an adverse gradient.

Variable Jet Carburetters.

Quite a number of riders are now using the novel B. and B. variable jet carburetter, and a hint may be of service to those untutored in its manipulation.

It is a mistake to regard a variable jet carburetter as a substitute for a case of loose jets of different sizes, *i.e.*, to wangle its lever in the hope of identifying one particular jet opening which will give an ideal adjustment for all sorts and conditions of work. The jet aperture of such devices should be constantly varied with the work in hand, and the best expedient is to enlarge the jet opening in harmony with the throttle.

To give a practical example, when riding my new B. and B. in traffic, I run on a small jet and a small throttle opening. When indulging in a sprint on the level, or climbing a bad hill, I open up the jet as I open up the throttle. In fact, I should be of the opinion that the jet lever might well be linked up to the throttle lever in ordinary riding, and I may perhaps experiment in that direction.

Hall Caine on Motor Cycling.

Mr. Hall Caine has been spreading himself in the columns of *The Isle of Man Times*, denouncing motor cycling in general and the T.T. races in particular. Fortunately for the future of the Manx races, a prophet is often without honour in his own country, and the feeling in the island generally is not sympathetic towards the famous novelist's prejudices.

In fact, a semi-editorial column of the same issue takes a diametrically opposite line, and, with that delightful frankness characteristic of journalism in a country where the libel laws are flimsy, administers a rebuke to our critic for driving a foreign-made car.

The novelist draws a harrowing picture of sick people clamouring for doctors, whom they are unable to obtain because the roads are closed for a race. There are no days in the year when the inland residents of the island can so easily obtain medical attention as on the race days, for the A.C.U. provides doctors and ambulance men all round the course.

The Collier-de Rosier Match.

It often happens that great athletic tests, to which the world of sport is eagerly looking forward, are marred by some trifling mishap, and the great Collier-de Rosier match was no exception. De Rosier won the shortest sprint with less ease than we had imagined probable. In the intermediate distance his front tyre collapsed, and Collier's victory was, therefore, of no significance. In the long-distance race, Collier's switch lever caused him to lose a good deal of ground, and, barring this trouble, Collier might have won, and, again, he might have lost, for de Rosier knew he had only to keep going to scoop £130, and had, therefore, every inducement to spare his engine.

It is to be hoped that another meeting can be arranged, and that in the event of either rider encountering trouble the event may be re-run.

Waterproof Collars.

I notice that my colleague "Road Rider" always recommends celluloid collars for tourist wear. Some riders dislike them, both because of their bluey appearance, and also because of an alleged inflammability, which is probably non-existent. May I therefore mention a patent collar known as the "Artee," procurable from most hosiers, which is made of waterproofed linen. It looks exactly like an ordinary collar, can be cleaned with a wet sponge, and is said to keep its shape perfectly in drenching rain.

Group of competitors ready for the start of the final in the Cliptone Track speed trial, arranged jointly by the Notts A.C. and Notts M.C.C. F. P. Johnson (5 h.p. Matchless-Jap), R. A. Johnson (3½ h.p. Premier), J. W. Mitchell (T.T. Triumph). (See page 751 last week.)

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and should be accompanied by the writer's full name and address.

Conduct in the Isle of Man.

[5752].—Referring to the correspondence in *The Motor Cycle* regarding conduct in the Isle of Man during T.T. race week. One youth was checked to ride a T.T. mount past the house I was staying at on Douglas Promenade forty-seven times on Sunday, July 2nd, with the exhaust pipe out of silencer resting on magneto chain cover and making a dreadful noise. Several motor cyclists made some wild remarks about his conduct. I think the Douglas authorities will fight against another race meeting being held on the island after such exhibitions as the above, and not the only sample. The only question I will ask is, Why don't such men enter for the race?

AN OLD READER.

Silence.

[5753].—For the past two years in India I have kept a Motosacoché, which never failed me, and I was particularly pleased with the silence of the machine. I noticed from your paper that the question of the exhaust was receiving attention in England, and I hoped on returning home to find that it had been solved. You may judge of my surprise when I find that there has been practically no improvement in the last five years.

In looking about for a machine which would be easy to run, and up to a sidecar, I finally chose a —, and one of the points which took my attention was the large exhaust box. The noise, however, is as overpowering as on any other motor cycle, and I freely admit it gets upon my nerves. Is there no method of really silencing a motor cycle? I hear the Scott is absolutely silent. If so, cannot the four-stroke single-cylinder also be made silent?

In the accounts of the Manx racing, I was struck by the unanimity with which all the writers dwelt on the "roar of the engines" as they went dashing past.

Noise is delightful to youth, and perhaps it is this fact which retards improvement in the direction which I have indicated. But I despair of the rapid increase of riders among the older generation (to which you so often look forward) if noise is to be the invariable attendant of the motor cycle, and if silence must for ever flee before her.

R. B. WOOD.

A Suggested 1912 Design.

[5754].—I have a 1911 two-speed twin lightweight which at present gives me every satisfaction, but, like every one else, I have my own ideas on the subject of lightweights, and would like to give a short description of my ideal machine for 1912, with the object of finding out whether anyone would build me such a machine (cost not to exceed £50), and also if such a machine were built would it be successful? My weight in riding apparel is 10 stones. Specification is as follows:

Engine.—2½ h.p. twin, of any well-known make, with mechanically operated valves and cut-out.

Ignition.—Bosch magneto, controlled from handle-bars.

Carburettor.—B. and B. lightweight.

Gear.—Zenith-Gradua, with free engine position.

Transmission.—Whittle belt, not less than ¾ in.

Saddle.—Xl'fall spring saddle.

Stands.—Front and back.

Frame.—Strong and low, fitted with footboards and Druid spring forks, wide mudguards, with side shields.

Tyres.—26 x 2½ non-skid.

Carrier, tools, etc., would be included, of course, as on every other motor cycle.

I do not think the weight should be much over 120 lbs., and the machine should be able to go anywhere, and be extremely comfortable.

I should be most pleased to see any suggestions from readers, the only points on which I am quite determined are a Zenith-Gradua gear, with a free engine position for wheeling the machine about in and out of garage, etc., a twin engine for comfort and easy starting, and no hand brakes.

TITUS.

The Motor Cycle as a Scouting Mount.

[5755].—I am sending you a photograph of myself on a 7 h.p. twin Indian.

As a scouting mount this machine proved itself a great success at the recent Norfolk Yeomanry Camp at Wells. Its silent running amongst the horses, power to start up any hill, and great petrol capacity, to my mind make this machine an ideal mount for military work. I had most awful roads to traverse, very often on grass, but not once

Lc. Cpl. C. Bettinson. (See letter No. 5755.)

in sixteen days (working about six hours per day) had I occasion to open the toolbag.

I send you this, thinking it might be of interest to your readers.

Lc. Cpl. C. BETTINSON, K.O.R.R.N.Y.

The Lady Motor Cyclist.

[5756].—Having seen from time to time in your paper photographs of lady motor cyclists, I thought that perhaps my experience would be of interest to some of your readers. My machine, which is a 2½ h.p. Condor, was converted from an ordinary diamond to an open frame (as shown by the photograph) by the Condor Motor Co., Coventry, and has proved very satisfactory during the time I have been riding it. It will be noticed that the dressguarding is very simple, but it has proved to be quite sufficient. The outer covers, wheels, and frame were second-hand. All other parts were new with the exception of the engine, which was thoroughly

The Condor machine referred to by Miss "E.H."

overhauled, new piston rings, connecting rod and valves being supplied, the engine now pulling with great flexibility, and I have not yet come across a hill that I cannot climb. The entire conversion came out at a very reasonable figure, and if any of your readers who are thinking of a similar venture would like further particulars I should be pleased to supply same.

I must add the usual disclaimer, being only interested in the firm so far as being a satisfied customer. E.H.

Foreign Machines and British Riders.

[5757].—I am sure every reader of your excellent paper will be pleased to note the dignified tone of your editorial comment on the letter of Mr. W. H. Wells which you print below his communication on page 748 of the last issue. You are quite right when you say in effect that in no other country would a foreign victory be so impartially dealt with as here. Certainly it would not be in America—last of all nations to accept defeat graciously in any shape or form.

As to Mr. Wells's gibes about foreign, and especially American, machinery being employed in this country to assist our manufacturers and others to carry on their work, one can find in the United States, wherever one looks, examples in plenty of good British machine tools (some of them Coventry made), British typewriters, and other products, and all are spoken of in the highest terms by their American users.

There is such a thing as good taste in writing a letter to the press, and if some of our foreign trade friends cannot learn anything else from the British, I think there is just a possibility that, in this direction at least, they might be able perhaps to take a lesson from the inhabitants of this "effete" (?) country.

It will, I am afraid, serve the purpose of our foreign rivals in the motor cycle trade but little if they throw away what they gain through victories by flouting the good opinions expressed with subsequent exhibitions of vain-glorious and altogether unwarranted egotism.

We are, I am sure, all greatly obliged to Mr. Wells for explaining the reason why some British riders prefer to ride foreign machines in competitions. Of course, none of us had associated the matter with any idea of £ s. d. previously. CHAS. S. LAKE, A.M.I.Mech.E.

[5758].—I find it impossible to comprehend the attitude of your correspondent, Mr. A. C. Davison, which he exposes in a letter under the above heading, published in the issue of July 13th.

He appears to regard everyone who rides an American machine as being necessarily devoid of all sentiments of

patriotism, whilst it would appear that Messrs. Godfrey, Franklin, Moorhouse, and Alexander are not only traitors to their country, but "commercial lunatics"—whatever that might be—in addition. Why this should be so I utterly fail to see. The $3\frac{1}{2}$ h.p. Indian, in winning the T.T., has demonstrated conclusively that, for the time being at any rate, it is the best twin racing machine of its size in Great Britain.

This fact may be an unwelcome one to the British manufacturer, but surely it cannot fail to have an ultimately salutary effect upon him. He has shown during the past three years that the only policy which he dare adopt in the manufacture of motor cycles is generally a somewhat slavish follow-my-leader procedure, and his innate conservatism has led to the design of motor cycles having reached a stage at which it may be not unfairly described as "stagnant."

In my opinion we have no cause to fear that the Yankee will come along and swamp the motor cycle market, for, as far as I can see, there is only one American machine worth serious consideration and that is the Indian.

I must now hasten to add that I have no interest other than that of a user in any motor cycle, British or foreign. PRIVATE OWNER OF AN INDIAN.

[5759].—As one who has known American business men on both sides of the Atlantic, I have admired the way in which in such a short time Mr. W. H. Wells has absorbed and assimilated their methods. Parenthetically I would ask, however, what Mr. Wells finds particularly to crow and flap about in the result of the Senior Tourist Trophy.

I reside in this little village (Lambourn) in an atmosphere of horse-racing, and weights in this neighbourhood are known to half a pound. In the T.T. no mention whatever is made of this most important particular. As a matter of fact, the second machine in point of time was disqualified for a technical breach of the rules which made the 1m. 3s. by which it was beaten look very small. This machine was conceding 4 c.c. capacity in the engine, and at least three stones weight in the rider to the winning machine, about whose magnificent performance Mr. Wells has let himself go "hot and heavy." I have laid stress on the weight carried in competitions in various letters written to your columns during the last six years in order that our racing results might be of some scientific value.

In the Junior event the time of the fastest little twin was within one and a half miles an hour of the fastest single-cylinder of 160 c.c. larger capacity. No data as to weights of machines and riders are given. Two other most important points have not been officially noted. The first is that

Mrs. Kirkpatrick, of Bedford, and her newly-acquired three-speed $2\frac{1}{2}$ h.p. Handy Hobart, of which she is a delighted owner.

the Junior gold medal winners were all multiple-speeded, while all the single-cylinder gold medal winners in the Senior were single-speeded, and all of the same make. I am glad to notice a complete absence of cock-crowing and wing-flapping on the part of the Triumph Co. I would remind Mr. Wells that there is an old English proverb "that good wine needs no bush."

CHARLES S. PATTERSON, M.B., M.R.C.S.

[5760.]—Oh, sir, pathos itself is plumed when Mr. Wells himself, an American gentleman, I presume, accuses Britishers of wanting to oust another nation's goods! Such a method of America is indeed the only one I know that England could copy with advantage. That I am unbiassed is proved by the fact that I can sign myself a J.E.W.

[5761.]—I have read with some surprise the letter on this subject penned by the Hendee Manufacturing Co., and signed on their behalf by Mr. W. H. Wells, and can only conclude from the tone adopted that their head has been turned by their success. I am sure that Mr. Wells will be the first to admit that patriotism counts for much in these degenerate days, but I am at a loss to know which country can claim Mr. Wells's allegiance. It does not seem so long ago that he was selling Vindec machines, fitted with French engines, and now he is selling American goods. I am surely stating the bare truth when I say that Godfrey's win was acclaimed more on account of his personal qualities as a rider, etc., than on the success of a foreign firm. It is after all quite natural that we should prefer an English victory, but to state that we were filled with disgust at an American victory is wholly untrue. Mr. Wells must surely remember the many congratulations he received in the island, my own amongst the number.

Every credit was given to the Hendee Manufacturing Co., and to Mr. Wells in particular, for the splendid way in which he has managed the firm and brought them to the forefront, but I fail to see why we must necessarily be elated at an English defeat, and also be debarred from legitimate criticism. With regard to his remarks about the singles, I should have preferred him to "make good first."

I have no doubt that the win has been a splendid advertisement, and one which was thoroughly deserved, but at the same time the British public will not be the gainers thereby. Mr. Wells infers that we should not use anything foreign if we are to be consistent, but I think that he has missed the whole point of the argument.

We are sorry, as is only natural, that the British machine did not win. Moreover, we only buy foreign articles for use when we find them superior to British-made goods; things being equal we naturally give the preference to English goods, that is why German magnetos are largely used, and sometimes tyres for racing purposes. Here in England we believe in a fair field and no favour, and I congratulate *The Motor Cycle* on the impartial tone in which it has reported this and other races. I very much doubt whether an English rider in America would meet with such a cordial reception as Mr. de Rosier has met with in this country. It has enabled him to give of his best in England, and I am more than pleased to note what a splendid rider he has proved himself to be and his modesty in the hour of victory.

IVAN B. HART DAVIES.

[5762.]—Mr. Wells's axe-grinding letter is really too hot. I have not the pleasure of knowing any of your editorial staff, but I am sure that, however painful the result of the Senior T.T. may have been, they swallowed it like sportsmen.

The remarks about typewriters, machinery, etc., do not want airing in the motor press.

There are many besides myself who agree that Godfrey, Franklin, and Moorehouse, were unpatriotic in using American machines. They will dispute also what is said about "British machines" and "also rans."

The Motor Cycle dealt with the incidents of the race and the result with an absolutely unbiassed pen. The winners were congratulated and the losers consoled in a way nobody could find fault with.

There is certainly no country where a beating such as we got would have had the same prominence allotted to it in its press.

I wonder whether the American contemporaries say anything about Charlie Collier's hard luck with petrol tank.

Whether they have gathered that . . . but I must not finish this. Charlie Collier lost, in fact he was not in it.

By all means let Mr. Wells "hoe his furrow" and rub our noses in it if he can. I hope you have made the memo. Mr. Editor, that he suggests. W.A.P.

[5763.]—In letter 5751 in your issue for July 20th Mr. W. H. Wells seems to have missed the point of Mr. A. C. Davison's letter in your previous issue dealing with the above subject. Mr. Davison obviously means that in an international race each country's representative machines should be ridden by riders from that country. Can Mr. Wells give us a single instance of an "all-British" machine fitted with a German magneto?

And this brings us to another point in his letter which is very interesting. He refers to "an American (italics please) machine being so successful in the Tourist Trophy Race." Is it not a fact that the Indian motor cycle which was awarded first place in the Tourist Trophy Race is fitted with English chains, German magneto, English mudguards, Continental tyres, frame tubes of English steel, and ridden by an Englishman? Truly, an international combination. As this correspondence has arisen from the fact that a foreign machine has been awarded the Tourist Trophy for the first time, it is as well for our American friends to remember that, although Collier was disqualified, along with the only American representative, he is regarded in England as the virtual winner. Anyone who has studied the reports of the event can easily see that Collier's net running time was by far the best. HAROLD KARSLAKE.

[5764.]—My word! Mr. Wells does the warpaint and brandishes the tomahawk over the head of my harmless little letter in a manner truly terrifying. Thank goodness he includes the editorial staff; I believe they are fine fellows, and my scalp feels safer.

But why drag in the typewriter and other bric-a-brac? The fact that we use certain useful American articles in other directions, or that Mr. Wells and his countrymen use Brooks's saddles and Renold chains on their motor cycles, and wear English clothes, does not disprove the fact that it is more patriotic for a Briton to ride a British machine.

I would readily concede Mr. Wells equal patriotism if he had not so recently changed from championing a German bicycle. His defence of the riders is unfortunate—for them. To begin with, he suggests that I accuse them of "disloyalty." I certainly did nothing so absurd. In all probability every Briton in the race was as loyal a subject as our King could desire. I suspect that Mr. Wells (perhaps pardonably, as English idioms are very trying to the foreigner) imagines "patriotism" and "loyalty" to be synonymous terms. Then he says plainly that they rode the machine which would bring most £ s. d. Quite so! regardless of the credit or discredit of their own country, which was just what I suggested. He would also find it difficult to show logically why the three riders placed first would have been among the "also ran" on other machines. The American machines ridden by Americans were very much among the "also ran," so that it was apparently the riders who made the difference, and why they should be slower on a machine like Mr. Collier's, which was the fastest in the race, is not apparent.

In Mr. Wells's last paragraph about what they are going to do to complete our abasement I seem to recognise the note of that noble bird, the great American cock-a-doodle. By all means let Mr. Wells go on, with the aid of his own tribe only though, and when the rising of the sun does happen to coincide with the crow of his chantecler, then we will bow down and plough with our noses the unpleasantly long furrow he promises so genially to provide. In the meantime, let him try to complete his present task of demonstrating that a Briton riding a British machine for the honour of his own country is not a nobler spectacle than one selling his services to the highest bidder.

A. C. DAVISON.

[5765.]—In reference to Mr. Wells's letter (No. 5751) in last week's issue it may be as well to clear the ground and get to facts as distinguished from international jealousy. There are points more important than those of mere nationality which tend to produce the success or otherwise of any particular make of motor cycle. There are motives other than those of patriotism which influence the motor cyclist.

particularly if he is a professional, in the choice of a mount.

To be a success a machine has (1) to be produced, (2) to be ridden, and last, but greatest of all, it has to be "handled" in the trade sense of the term.

Given a sound machine and a good rider it will be powerless without skilful "handling" in business. I will leave Mr. Wells to draw his own conclusions from this. The Indian is not good merely because it is American. Godfrey, Franklin, and Moorhouse do not ride it merely because it is American. American machinery is often splendid stuff, and is employed where it excels just as are other foreign goods in all kinds of business and as English goods are used in the U.S.A. in spite of tariffs. And have we not heard of American shoddiness and scamped work somewhere or other?

Your editorial was most moderate in its terms. There was no disparagement of Americans or of the Indian. What about Yankee journalism under like conditions? If any international bickering is to ensue it is Mr. Wells who began it. No aspersion was cast on Godfrey, Franklin, and Moorhouse; all that was expressed was the regret now felt that they had not been riding British machines.

Two of them, at any rate, I know personally for as good sportsmen as ever walked, and I, in common with others, think none the less of them because they did well when they were riding American machines.

Mr. Wells's remark about his advertisement in your columns shows a pettiness of feeling which you might reasonably have censored before going to print. It comes a surprise to me to learn that "Britain for the British" is a Socialist cry, but then, Mr. Wells surely knows what he is writing about. Mr. Wells has been long enough in England and knows English sportsmen too well to think they would generally adopt the absurd attitude he attributes to you.

Good gracious! What difference does it make to England that an American machine should win by a small margin such as this?

B. C. DE W. SIFFKEN.

[5766.]—Although I was one of the first motor cyclists in this country I am not a person who is unable to mind his own business, but I cannot let pass the letter from Mr. W. H. Wells in last week's issue. If it were not for your exceeding fairness you would never have published such a letter as that from Mr. Wells, but American ideas of "sport" have always been somewhat strange to us on this side of the pond, so he must bear me no ill will if I take up the cudgels where you cannot well do so yourselves.

His would-be sarcastic and greatly exaggerated letter defeats its own objects, and I am sure many will feel that there is at least one advantage in British machines, and that is that they are sold, *not* by Americans!

Surely Mr. Wells is not blind? Has he not seen how liberally his machines are always treated in your paper? Does he not realise that from the beginning you have given both himself and his machines a most extraordinary degree of prominence?

Again, as regards his advertisements, would he like to stop them, and does he never make use of your columns?

No, Mr. Wells, if the victory had been one of English machines in the "U-nited" states, then we might have had cause for complaint, as anyone will realise who reads their papers, and as far as his "victory" is concerned I admit I am astonished more people do not realise exactly what it consists of.

The vast majority of people like a machine that is comfortable and clean; perhaps he did not happen to notice the condition of the J.A.P. engines after the T.T. there was hardly a speck of oil on the crank cases. In both T.T. and the recent matches the Indian machines have been lucky, and thus have been "victorious," and if Collier had not had the misfortune we all know about, the Matchless machines would have again won the T.T., and with plenty to spare, in spite of the fact that Mr. Wells's entry makes one think of "Indian, Indian everywhere, and just for the a.d.v."

I bear no grudge against Mr. Wells; in fact, I heartily admire him, yes and his splendid machines, for such they certainly are, but, "Mr. Indian," don't, don't forget what the Britishers you jeer at have done for you.

A. M. LOW, A.C.G.I., etc., etc.

[5767.]—The American idea of sportsmanship is proverbial, and what could be more typically American than the letter you publish from the Hendee Manufacturing Co.?

I read *The Motor Cycle* carefully, but failed to see in it any resentment, veiled or otherwise, regarding the Indian victory in the Senior T.T. Race. Indeed, the attitude of the press has been justly generous in its recognition of the winner's success. It remained for Mr. Wells to strike the first discordant note. Of course, it is open for anyone to "read between the lines" of your publication, as did the Hendee Co., but you can hardly be held responsible for distorted constructions placed upon your words. These naturally would vary with the temperament of each reader.

We should all have rejoiced at a British win, but on this side of the Atlantic we do not treat a foreign victor as the Hendee Manufacturing Co. evidently expected to be treated. I fear Mr. Wells's sour letter will prove an advertisement of the wrong sort for his firm.

R. WADE.

[The letters published above are but a selection of a very large number we have received on the same subject.—Ed.]

Route for the Six Days' Trials.

[5768.]—I have been a regular reader of *The Motor Cycle* since September, 1907. I note the remarks *re* the Six Days' Trials in the last issue. On page 707, fourth day, the route is given, but mention should be made that between Newby Head and Hawes there is a moorland gate blocking the road. I hope the A.C.U. will have a man stationed here to keep the gate open, otherwise there will be much delay.

REV. JOHN HODGKIN.

The International Match. Two Sportsmanlike Offers.

[5769.]—As there seems to have been a certain amount of bad luck on both sides in the International Match at Brooklands on the 15th inst., it seems to me that a second match would be very interesting.

I see by your report of the matches that the deciding one would have been very much closer if Collier had not had bad luck, and also the second one if de Rosier's tyres had not given trouble.

So if de Rosier is still in England, and another match could be arranged, I should be very pleased to put up £50 towards the stakes.

W. MACNEILL.

[5770.]—England has been beaten, and we must salute the makers of a faster machine, the rider of which gave a very definite proof on the 15th that he can do as he likes.

It must have been very evident to those present that the difference in speed of the two machines can mostly be accounted for on the score of weight. The lighter engine of the Indian, with its lighter flywheels and crank case, the lighter cylinders, made possible by the aid of steel tension rods to hold the head down to the crank case, does not require the heavy frame that the J.A.P. engine does.

The 2in. tyres are also faster, and it is questionable whether "C.R." would ride them on account of the risk.

However that may be, it is pretty certain that if the J.A.P. people will build a special light engine, and the Matchless people left to finish the rest in accordance with the weight to be carried, the result of a second match might be different.

Many of your readers will say that both riders had the same opportunities, but they do not realise the difficulties of building what is, to all intents and purposes, a new type of machine with a powerful engine. Let it be understood that in no way is any slur intended against the Indians. They have proved themselves what they are, in the last few weeks, but we still have the men, and in England the sportsmen, so that on the face of it the position is this: England with all her large motor cycle manufacturers, very unfairly, leaves it to one firm, and that not a large one.

The results of the T.T. Races and this match have their effect the world over, especially in the case of a sweeping victory. And I suggest that those who take a sportsmanlike interest in seeing England keep her end up should join in contributing to a fund to be formed to build a machine capable of competing with the Indian on even terms. As your contributor recently mentioned, Messrs. H. A. and C. R. Collier have for years past been England's leading racing men, which has meant an outlay which it would be safe to say no other firm would have faced, and this should give all motor cyclists who have the sport at heart an opportunity to show it in a practical way. Should this idea take shape I enclose cheque for £5 5s.

E. BARNEATHER.

INTER-CLUB HILL-CLIMB.

OXFORD M.C.C. v. NORTH-WEST LONDON M.C.C.

THIS annual meeting was brought off successfully on Saturday at Kop Hill, near Princes Risborough, under rather extraordinary circumstances, inasmuch as a pedal cycle hill-climb was being run off at the same time.

Most motor cyclists would have thought Kop Hill unclimbable to the ordinary cyclist, but three hardy competitors, panting and puffing, jerked their machines over the top, most of the others failing early on the last steep portion. Both motorists and cyclists went away seemingly 'with increased respect for the others' powers.

The Oxford M.C.C. had evidently taken the match more seriously than the North-west London men, for their machines, besides including several lightweights, were heavily loaded with 56 lb. weights and other means for taking advantage of the now admittedly weak A.C.U. formula. This, however, nearly led to their undoing, for two of the lightweights failed to reach the top, preventing their club from completing the necessary six to count. In order to qualify, J. Webb uncoupled the sidecar from his Triumph, borrowed a large jet, and made one of the best climbs of the day. This keenness carried his side to victory, as the figures show.

As to the individual ascents, Hal Hill, on his 5 h.p. Bat, made by far the fastest ascent, and must be learning by now every stone on the hill—numerous though

they are. His clubmate, Brunton, on a similar machine, was next fastest, and his appearance round the corner, just as one of the pedal cyclists was indulging in his last expiring wobble, was exhilarating.

Hill (Oxford) was fastest single on his 554 c.c. Bradbury, and Viggers, on the twin Enfield, was faster than most of the singles. Hilhouse, weighing 15 stone odd, scored well on his Triumph in spite of using an ordinary jet, having lost his specially prepared one.

The results, given below, show that Oxford scored a comfortable win, repeating last year's success:

OXFORD M.C.C.

	Time.	Formula.
H. G. Hill (3½ Bradbury) ...	47½s.	672
R. H. Viggers (2½ Enfield) ...	57s.	696
Askew (3½ Triumph) ...	58½s.	743
J. Webb (3½ Triumph) ...	56s.	767
Hardy (3½ T.T. Norton) ...	54s.	831
W. Collier (3½ Ariel) ...	67s.	865
W. A. Matthews (7 Indian) ...	43s.	1,020
S. Collier (2½ Enfield), failed.		
J. Beard (2½ New Hudson), failed.		

Total six best ... 4,574

NORTH-WEST LONDON M.C.C.

S. Hilhouse (3½ Triumph) ...	62s.	703
Hal Hill (5 Bat-Jap) ...	38s.	753
G. R. Owen (3½ Zenith) ...	62s.	831
M. Brunton (5 Bat-Jap) ...	41s.	846
H. J. Pooley (3½ Premier) ...	62s.	883
G. Rowden (3½ Triumph) ...	73½s.	1,033
G. H. Hollis (2½ Douglas) ...	129s.	1,341

Total six best ... 5,099

Fastest time of the day, Hal Hill (Bat-Jap), 38s.

BRADFORD M.C.C. OPEN HILL-CLIMB.

This club is holding its third annual open hill-climb next Saturday, the 29th inst., commencing at 2 p.m. The classes, which are twelve in number, embrace every type of motor cycle.

The hill, which is at Baden Moor, near Skipton, has, within the last week or so, been repaired, and will be swept on the day before the climb.

Class 1 (for lightweights) is open to T.T. models which may be stripped.

Classes 2a (for touring machines up to 560 c.c.), 6a (for single-cylinder racing machines up to 500 c.c.), and 8a (for any machine up to 1,000 c.c.), and classes 2, 6, and 8 respectively, are synonymous except for the fact that the three former are for amateurs only.

The prizes for the three classes are:

Class 2a, a set of Lucas headlight and generator, presented by Messrs. J. Lucas, Birmingham.

Class 6a, a pair of Palmer tyres given by Messrs. the Palmer Tyre, Ltd.

Class 8a, a pair of Continental rubber-studded tyres given by Messrs. the Continental Tyre Co.

The other classes are:

Class 3, for multi-cylinder machines up to 750 c.c.

Class 4, for variably geared single-cylinder machines up to 560 c.c.

Class 5, for variably geared multi-cylinder machines up to 750 c.c.

Class 7, for multi-cylinder racing machines up to 585 c.c.

Class 9, for passenger machines up to 1,000 c.c.

Will the patentee of the Cape antivibrator kindly communicate with the Editor?

The scene of the inter-club hill-climb last Saturday—Kop Hill, near Princes Risboro.

Summer Quarterly Trial

NORTHERN CENTRE EVENT
THIRD OF THE ACU 1911 SERIES

Motor Club presented an animated scene when the rather meagre number of entrants for this event were started, in beautiful weather. The route lay through Hexham, Choller-

SHORTLY after 8 a.m. on Saturday last the headquarters of the Newcastle and District

After Brunton Bank the road to Rothbury was fairly easy, though the surface caused some uneasiness by reason of its loose and stony nature. At Rothbury, most charmingly situated amidst trees and hills, a stop was made for lunch at the Queen's Hotel, where the service might easily have been improved.

Leaving Rothbury, Lakeside—one of the worst hills—proved the undoing of W. Appleby, who had to run for a short distance by the side of his mount. The remainder made satisfactory ascents in spite of the very loose surface. Once up Lakeside, which is about two miles long, a magnificent view could be obtained of the Northumberland hills, and also of the next timed climb, which resulted in E. L. Bates (5½ h.p. Scott) recording only 4s. error, Alan Hill (3½ h.p. Rudge) coming next with 11½s. error, his *confrère*, C. S. Bunney (3½ h.p. Rudge), being third with 12½s. deviation from the standard speed. From Corby Bank, which was soon reached, and, like all the rest, easily surmounted by all, came a grand run into Alnwick, and from now onwards the roads were in splendid condition, the only bit of excitement being at the Watersplash, near Ilderton. Here a large number of competitors, whose discretion tempered their sense of valour, dismounted and pushed over the little footbridge. Those who rode through experienced for the next mile or two no little anxiety from slipping belts, etc. It was a fine sight to see the competitors charge the water, but E. B. Ware's charge was "grand." He afterwards stated he went at the water at fifty miles per hour, and probably he did, for he caused a fine upheaval. After the Watersplash the run home *via* Morpeth was easy, the majority of the competitors riding within a few yards of one another. Tea was served on arrival at the Newcastle headquarters, and thanks are due to the officials of that club for its unstinted kindness and generosity, all the competitors and officials being made hon. members for the occasion.

Five competitors in the A.C.U. Quarterly Trials who rode Dene-Precision motor cycles. Left to right: A. Clark, W. Appleby, R. Henderson, J. H. Wood, and Isaac Baty.

ford, Four Lane Ends, Elisham Bridge, to Rothbury, returning by Alnwick and Ilderton, an approximate distance of 150 miles. Out of twenty-six competitors, of which three were passenger machines, there was only one non-starter, viz., Dr. Hugh McManus, who competed in the Yorkshire centre event. He had entered his 3½ h.p. Scott.

Though the entrants were fewer in number than usually, most ran very regularly, and the percentage of non-stop riders was much greater than usual. Only one rider had to retire through tyre trouble. The most serious difficulty experienced was that by A. B. Keene with the cooling and fans of his sociable. He was most unlucky, for he is a well-known Northern motor cyclist, and has driven his sociable successfully for some months. The riders were despatched with promptitude and soon left the tramlines of Newcastle behind, proceeding on undulating roads against a nasty head wind which made the dust very trying. Passing through Hexham we were soon upon the first timed hill, namely, Brunton Bank, close to Chollerford, which is not difficult, and had it not been for a rather awkward right angle turn at the foot, all the riders would have negotiated it with ease.

First Failure at Brunton Bank.

As it was only one man failed, and this through four or five competitors endeavouring to take the corner at the same time. The unfortunate had a slight skid, and his engine refused to recover itself. The timed ascent of this hill proved how regularly most of the riders were running. G. B. Hall (4 h.p. Matchless) was first, only 1½s. error; second, A. J. Stevens (2½ h.p. A.J.S.), 22s. error; third, Frank Smith (5 Clyno and sidecar), 5½s. error.

One of the three competitors on passenger machines: A. B. Keene and his A.C. sociable.

THE A.C.U. SUMMER QUARTERLY TRIAL IN PICTURES.

Waiting for the signal to start. H. Mason (4 h.p. Matchless), E. W. Merrall (3½ h.p. P. & M.), and G. Bell (3½ h.p. New Hudson).

Frank Smith (5-6 Clyno and s.c.) negotiating the water-splash near Ilderton.

T. W. Hall (3½ h.p. Bradbury) rounding the right-angle bend of the ascent of Brunton Bank. Mr. F. Straight is timekeeping at the corner.

Checking the competitors at the Queen's Hotel, Rothbury, where lunch was provided.

E. L. Bates (3½ h.p. Scott), hon. sec. of the Newcastle Club, climbing the second test hill—Corby Bank. A magnificent panoramic view was obtainable from this point.

A.C.U. JUDGES' REPORT OF THE SUMMER QUARTERLY TRIAL.

The third Quarterly Trial was held on Saturday, July 22nd, starting from Newcastle and proceeding *via* Hexham, Branton Bank, and Otterburn to Rothbury, where lunch was partaken of, and returning *via* Corby Bank, Eglington, and Morpeth, a total distance of 130 miles being covered. The entries, unfortunately, were far below the average, and consisted of twenty-one heavyweight machines, two lightweights, and three passenger machines. All started except one. The weather was exceedingly fine, and the roads in excellent condition as a whole, though rather rough in places. It will be seen by the tabular report that eleven entrants received first-class certificates and thirteen certificates of performance were granted, several competitors who made non-stop runs being disqualified from receiving first-class certificates in consequence of defects to their machines. On the outward journey it was noticed that certain machines were very noisy, but at the luncheon interval competitors were requested to close their cut-outs, and, in consequence, the noise was diminished. The tappets on one make of machine and tappets and auxiliary exhaust on another were noticed to exude oil, as in former trials. One competitor on a Scott machine was nicely enveloped in a rug, much to his comfort.

The new Rudge gear, in its experimental form, made its first appearance in a Quarterly Trial and though rather rough and large, appeared to answer well, and will doubtless be improved in course of time, whilst another novelty was an internal-expanding brake actuated by a Bowden wire and fitted to the wheel of a sidecar. The brakes on several machines did not work well, failing to come off when pressure was released. Only one competitor failed to finish, the cause being tyre troubles. One competitor on a T.T. Matchless fitted with a new six-speed gear unfortunately thought it desirable to appear in racing costume, but it is as well to point out that this is a touring trial, and everyday costume is preferable. The wheels of the Chater-Lea sidecar were shod with car tyres, which doubtless added to the comfort of the riders and minimised the likelihood of puncture. The course was the easiest of this year's series, and it is a regrettable feature that the trial, being the first held in the North, was not better supported. Great thanks are due to the members of the Newcastle and District M.C. and N.E.A.A., who rendered valuable assistance in marking and marshalling the course.

H. G. COVE and D. K. HALL, Judges.

THE BRADFORD-DUNBAR-BRADFORD 24 HOURS' TRIAL.

Under favourable weather conditions twenty-five out of the twenty-eight entrants in the Bradford M.C.C. reliability trial last week-end faced the starter, and of these fifteen survived the twenty-four hours' ride. The only two solo riders who were competing for the William Briggs Trophy to finish on schedule time were T. G. Bullus (riding a $3\frac{1}{2}$ h.p. P. and M.) and Miss Pickles (riding a $3\frac{1}{2}$ h.p. Scott). Amongst others to finish were A. Kilburn ($3\frac{1}{2}$ h.p. Triumph) and A. Grimshaw ($3\frac{1}{2}$ h.p. Rex). In the teams' class a good performance was put up by the Batley Club's team, captained by C. Sydney, and including S. Todd and S. Horsfall, all

mounted on Triumphs. The Ilkley M.C.C. team members also finished complete; whilst another team arrived one man short, who had retired about twenty miles from home with engine troubles. In the passenger class J. N. Longfield, with a $3\frac{1}{2}$ h.p. Scott and sidecar, put up an excellent performance, being closely followed by P. Shaw with a $3\frac{1}{2}$ h.p. P. and M. and sidecar. Mr. Russell (on a 7 h.p. Chater-Lea and sidecar) also came through successfully, but Mr. Bennett on a similar machine was unfortunate in losing his way. The numerous punctures were a feature of the trial, only one or two being free from trouble in this direction.

Preparing for the start of the Scottish Trials last Monday morning. Several of the competitors rode up to Edinburgh after competing in the Quarterly Trial last Saturday.

ENTRIES FOR THE SIX DAYS' TRIAL.

Considerable interest is being shown in the forthcoming six days' trial in Yorkshire, to be held from August 14th to 19th next, starting from Harrogate as a centre each day. Entries are now being received by the A.C.U., and everything points to the trials being very successful. Entries:

W. Cooper ($3\frac{1}{2}$ Bradbury)	J. Tassel (8 Matchless & sc.)
E. Ware (8 Chater-Lea & sc.)	A. Abbott (8 Matchless & sc.)
A. C. Robbins ($3\frac{1}{2}$ Humber)	H. H. Bowen (4 Bat-Jap)
E. A. Colliver ($3\frac{1}{2}$ Zenith)	W. Pratt ($3\frac{1}{2}$ P. and M.)
C. C. Cooke ($3\frac{1}{2}$ Triumph)	H. V. Colver ($2\frac{3}{4}$ Enfield)
V. Wilberforce ($2\frac{1}{2}$ N.L.G.)	H. Greaves ($2\frac{3}{4}$ Enfield)
B. H. Davies ($3\frac{1}{2}$ Rudge)	P. Weatherill ($3\frac{1}{2}$ Zenith)
W. W. Douglas ($2\frac{3}{4}$ Douglas)	J. Haslam (6 Zenith)
W. W. Douglas ($2\frac{3}{4}$ Douglas)	R. W. Duke ($3\frac{1}{2}$ Z.G.)
R. Owen Wells ($3\frac{1}{2}$ Bradbury)	

Messrs. Colliver, Cooke, and Wilberforce will comprise

the Herts County A.C. team competing for the prize for the best performance by a team of three private owners nominated by an affiliated club. There is also a prize for the best performance by a team of three machines entered or nominated by a trade representative.

Entrance fees.—Trade entries, first machine, £5 5s.; each additional machine, £3 3s.; Private owners, £3 3s.; ditto, members of A.C.U. or its affiliated clubs, £1 1s. Not more than three entries will be accepted from any manufacturer or agent. Entries close on Monday, July 31st, at the above fees. Late entries will be accepted up to and including Saturday, August 5th, at double fees, and must be sent to the secretary, Auto Cycle Union, 89, Pall Mall, London, S.W.

A large number of local motor cyclists and agents have kindly offered to assist the Union along the route by directing or checking the competitors. Still more are required.

THE SCOTTISH SIX DAYS' TRIALS.

MOST of the thirty-seven entrants arrived in Edinburgh on Saturday, and as there was no official parade of the machines until 7 a.m. on Monday, the interval was spent in attempting freak hill-climbs. Competitors mustered at the Murrayfield car terminus, a dozen having been working at their machines most of the

Monday Afternoon's Run.

Hay's Alcyon was the only machine unaccounted for when we left Arrochar after lunch; and, rounding the end of Loch Long by an execrable road, we struck up into the pass of Glencoe to tackle the famous ascent, which terminates in a hairpin bend at "Rest and be Thankful." As this climb covers five miles of road, it is impossible to say who made clean ascents.

From the summit the roads were atrocious for sixty miles. The hard stony patches were pleasant compared to the deep soft rutty patches, which hurled the back wheels in all directions and led to several heavy falls. Rain fell incessantly, and the vile surfaces combined with countless blind and slippery corners and many short steep hills, made the day exceptionally trying. After leaving Glencoe we dropped down to the shore of Loch Fyne, rounded it to Luveraray Castle, then across another pass to Loch Awe, and then round a shoulder of Ben Lui to Killin, at the head of Loch Tay, along which we ran into Kenmore at the foot of the worst side of Amulree Hill, and so into Aberfeldy.

The following are my impressions of the performances on the top pitch of "Rest and be Thankful." It should be noted that many of the riders who reached the concluding hairpin in the saddle had stopped lower down with belt or overheating troubles, while quite half the entrants were caught napping by the deceptive knuckle near the foot, and suffered short stops there. Class 1.—Colver, splendid; Morrison, Fletcher, Phillips, and Gibb, all four Douglasses, made clean ascents, and Holroyd (Motosacoche) came up well, pedalling. Clyno sidecar excellent; Chater sidecar dropped passenger.

Class 2.—Thompson, excellent; Davies, slow, steering one handed, other hand keeping low gear in; MacGregor, failed; Gibb, excellent; Morrison, excellent; Gray, good; Hill used his Rudge gear cleverly; Smith ran alongside corner; R. Downie and Pennington magnificent performances on single gears; F. Downie, walking alongside, belt slipping; Mouat, failed corner; Westwood, ran above corner; Bell, pedalling; Pratt, very good; Bostock, excellent; Elce, failed corner; Burney, good; Houghton, tried to cut inside Dibb on corner and stuck; Silver, excellent; Fontaine, failed on corner. G. L. Fletcher stripped the timing and retired at Killin; Donaldson, delayed Arrochar with broken crank case; Silver had bad fall; Gerard's Enfield, magneto trouble near Stirling; Scott, missing; Hay, missing; Pennington broke valve.

Class 1.—Lost marks: Hay, 60; Gerard, 60.

Class 2.—Lost marks: R. Downie, 18; Mouat, 8; Donaldson, 60; Alexander, 49; Pratt, 33; Bostock, 60; Scott, 60; Pennington, 60; Silver, 17; Fontaine, 60; MacGregor, 60. The missing men all arrived in the small hours.

Start of the Scottish Trials from Edinburgh on Monday last.

night. An Edinburgh rider trained up to London and back on Saturday to fetch parts, but he was there up to time. Allan Hay, who always provides the comic relief of the Scottish Trials, had dropped his spare cover overnight on a trial run, and only appeared at 6.55. Pigott withdrew his Zenith. The thirty-six starters were, therefore, as follows:

PASSENGER AND LIGHTWEIGHT CLASS.

Allan Hay (2 Alcyon)	H. V. Colver and Gerard
J. Morrison, G. L. Fletcher,	(two-speed Enfields)
P. Phillips, and W. B. Gibb	F. Smith (5 Clyno and sc.)
(two-speed Douglass)	E. B. Ware (Chater Lea, sc.)
J. S. Holroyd (Motosacoche)	

TOURIST CLASS.

B. H. Davies, G. T. Gray,	Silver and Fontaine (single-
A. Hill, and Mouat (Rudges	geared Quadrants)
with N.S.U. 2-sp. gear)	Dixon, Bostock, and Bell
W. H. Elce and C. S.	(3 sp. 3½ New Hudsons)
Burney with Rudge gear	Westwood and Pennington
W. Houghton (Rudge)	(3½ T.T. Triumphs)
Thompson (8 Bat)	R. Downie (3½ single-geared
C. McGregor (5 Bat)	Brown)
R. Morrison (5 Bat)	F. Downie (3½ single-geared
Smith (8 Bat)	Ariel)
Alexander and Pratt (3½	Scott (3½ single-geared B.S.A.)
two-speed Humbers)	Donaldson (5 single-geared
Dr. Dibb (5 two-speed Rex)	Norton)

Pennington had trouble with a big-end of his 1910 Triumph on his way to Edinburgh, and fitted an engine borrowed from a 1908 Triumph, which he had formerly owned. The weather at the start was ideal, fine and not too hot; and, indeed, some consolation was needed to atone for the atrocities of the ride into Stirling, which was a nightmare of cobbles, pot holes, bumps, tramlines, dogs, bare-legged children, and ugly villages. Half a mile from the start I espied the ever radiant Hay pedalling his engine on the stand enveloped in clouds of smoke.

Stirling was reached without incident. The sky had grown dark and lowering, but we hoped this was merely due to the smoke cloud of a large industrial city; also as we struck off west towards the bonnie banks and braes of Loch Lomond rain began to fall heavily, and continued throughout the day. Long before the luncheon control at Arrochar was reached, most of the riders had been suffering with slipping belts, and if some astute dealer had turned up with a big stock of leather belts, he would have done a roaring trade.

At the checking station at Stirling on the first day's run. The competitor on the right is Tom Silver and his Quadrant, probably the most experienced member of the trade in this week's trial.

CURRENT

CHAT

SPECIAL FEATURES.

FOREIGN MACHINES AND BRITISH RIDERS.

THE SUMMER QUARTERLY TRIAL IN THE NORTH.

THE SCOTTISH SIX DAYS' TRIAL (Illustrated).

Are Britishers Sportsmen?

A sum of £55 5s. is offered by two readers in our letters pages this week towards stakes for another Collier-de-Rosier match.

A Colonial Issue.

On October 12th a special Colonial issue of *The Motor Cycle* will be published, the contents of which will be of particular interest to our numerous readers in overseas dominions. Further details of this issue will be announced shortly.

Associates' Gala Day.

The inter-club meeting and gala day of the Associated Clubs takes place at Brooklands next Saturday, commencing at 12 noon. For the A.C.U. Short Distance Handicap of five and a half miles there are twenty-four entries. In the Inter-club Team Race the following clubs have entered: North-west London M.C.C., Purley and District M.C.C., Surrey and District M.C.C., Herts County A.C., and Streatham and District M.C.C.

The End-to-end Sidecar Record.

On Monday at 2.55 a.m. Hugh Gibson, of Southport, who is the present holder of the End-to-end sidecar record on a $3\frac{1}{2}$ h.p. Triumph, left John-o'-Groat's in an attempt to beat his own figures of 40h. 47m. Gibson this time rode a Bradbury and sidecar, with two-speed gear, and minus pedals. At the start the weather was dry, and there was a slight side wind. A telegram signed Morison advised us that Gibson left Beaulieu (134 miles from the start) at 8.10 a.m., and a postcard gave the time at Perth (266½ miles) as 1.50 p.m.

Wigan was left at 12.40 a.m. on Tuesday, and Gloucester at 6.57 a.m.

Attempt on the Six Days' Record.

A. W. Brittain, of Cambridge and Buxton, whom we referred to last week as having commenced an attempt on the six days' record, started again on Wednesday last week at midnight. He covered nearly 500 miles on the first day, and on Friday morning he called upon us, looking fairly fit, having added 300 miles to the total. Returning from Cheltenham in the evening he almost staggered into our office his limbs being nearly immovable owing to cramp, due to sitting in one position for so long. Our remarks to him were certainly not of the most encouraging kind, though we were bound to admire his pluck and tenacity. A postcard next morning advising us that he had retired at Leicester, as he simply could not walk

owing to cramp, caused us no surprise, but a footnote saying that he hopes to start again in about a week made us wonder where British pluck finds a limit. If six-day record aspirants had seen Mr. Brittain on Friday as we did, we are convinced that such prolonged physical tests of endurance would cease, yet our description of the spectacle to another motor cyclist, who showed us privately his timetable, proved no deterrent, and he assured us that, in his opinion, success was wholly a matter of careful preparation for such an arduous task.

TIME TO LIGHT LAMPS.

July 27th	8.54 p.m.
" 29th	8.51 p.m.
" 31st	8.48 p.m.
Aug. 2nd	8.46 p.m.

Six Hours' Lightweight Record

C. Stanley Franklin went for a six hour record attempt at Canning Town track on Saturday, 22nd inst. His machine was a Hazel, made by the Cripps Cycle and Motor Co. The engine was a $2\frac{1}{2}$ h.p. J.A.P., 70×76 mm., Amac carburetter, Dunlop $\frac{1}{2}$ in. belt, Hutchinson 26in. by 2in. beaded edge tyres. The machine was also fitted with a Cowey speedometer. The following are the times and distances accomplished:

Hours.	Mls.	Yds.	
1	34	587	
2	69	808	
3	101	1,740	
4	136	1,595	
5	169	392	
6	203	222	
Miles.	H.	M.	S.
50	1	26	29½
100	2	54	7
150	4	26	14½
200	5	54	15½

At 100 miles Franklin stopped to take in petrol, his tank only holding a gallon. After riding four hours he stopped for refreshment. Mr. J. H. Burley, official timekeeper R.A.C. and A.C.U., held the watch.

THE WATER-SPLASH IN LAST SATURDAY'S QUARTERLY TRIAL.

The brothers Stevens, riding $2\frac{1}{2}$ h.p. A.J.S. machines, braving the water near Alderton. They ran most consistently.

The Quarterly Trial.

The committee of the Newcastle and District M.C. kindly arranged for all competitors and officials in the Quarterly Trials to be made honorary members of their club during their stay in Newcastle. The Newcastle Club has one of the most comfortable club quarters in the provinces, and its hospitality was much appreciated.

Another Six Days' Record Attempt.

J. Guzzwell, of Grimsby, whom we mentioned last week as about to commence an attack on the Six Days' Road Record, advised us on Monday that he expected to start to-day (Thursday). Guzzwell first waited to see how Brittain fared, and a further delay was due to non-delivery of his tyres.

Military Motor Cyclists.

In addition to furnishing a contingent of motor cyclists to do duty with the Directing and Umpire Staffs, the A.A. and M.U. has been requested to furnish despatch riders for service with the 1st and 2nd Divisional Telegraph Companies, Royal Engineers, during the period of Inter-Divisional, Command and Army Manœuvres from 11th to 21st September. There will also, probably, be vacancies at the headquarters of the Aldershot Command during the same period. The rates and allowances are similar to those previously announced for the Directing and Umpire Staffs. Full particulars can be sent upon application to the official Manager, Caxton House, S.W.

A Road Race Run on Formula.

Continental motor cycle organisations seem to be awakening to the importance of competitions, as the Liège Motor Club will hold a challenge cup race on August 6th. The event is confined to members of the Antwerp and Liège clubs, and is for touring machines. The route is Aywalle to Bastogne and back, about 125 kilometres. The results will be decided on a

$P \times V$
formula —, P being weight of rider and machine, V speed in metres, and C cubical capacity. The above strikes us as rather a good way of deciding a speed event, light and heavyweight riders and machines appearing to have an equal chance.

Italian Road Race.

The Turin Sporting Society is holding a motor cycle race on August 13th on the road from Suse to Cenis. In addition to Italian riders, members of the Lyons Motor Club and other French riders, also Swiss competitors, are expected to take part. Owing to the popularity of the Turin Exhibition, this Italian event will doubtless be the most important motor cycle contest that has ever been held in Italy. English firms who are exhibiting at the Turin Exhibition and intend to take part should communicate with the president of the Turin Sporting Club, Via Cuneo N 3. Turin, Italy.

FUTURE EVENTS

- July 24-29—Scottish Six Days' Reliability Trial.
 „ 29—Bradford M.C. Third Annual Open Hill-climb.
 „ 29—R.A.C. Associates' Gala Day at Brooklands. Cars and motor cycles.
 „ 29—Exeter and District M.C. Open Hill-climb.
 „ 29—North Middlesex M.C.C. Open Hill-climb.
 Aug. 7-8—Dublin and District M.C.C. Open Two Days' Reliability Trial to Glengarriff and Killarney.
 „ 14-19—A.C.U. ANNUAL SIX DAYS' RELIABILITY TRIAL. HARROGATE AS A CENTRE.
 Sept. 2—Coventry and Warwickshire M.C. Annual Open Hill-climb.

Rear Red Reflectors.

The Automobile Association and Motor Union has decided to distribute 10,000 reflex rear lights to cyclists for fitting to their bicycles. "Ixion," it will be remembered, suggested some months ago that cycle manufacturers should fit them gratis for the cyclists' own benefit.

Collier-de Rosier Match.*

The official measurements of de Rosier's Indian (No. 21) used in the international races against C. R. Collier's Matchless-Jap are as given below. These measurements were taken by Mr. T. W. Loughborough, A.M.I.A.E., official measurer to the Auto Cycle Union: De Rosier's engine—Bore 82.55 mm., stroke 91.87 mm., c.c. 985.6. C. R. Collier's Matchless was entered as 90 x 77.5 mm.

Saturday's Quarterly Trial.

Although the entry for the A.C.U. Quarterly Trial in the Northern Centre was not so representative as it usually is, the results show a striking advance in the percentage of non-stop certificates gained. Fifteen of the twenty-five starters completed the course of 130 miles without experiencing trouble in any way, twelve of that number being awarded first-class certificates.

The next and final event of the 1911 series will be held in the Midland Centre next October. It has been suggested that the competitors follow a westerly course, and include the Cotswold Hills.

Motor Cycle Camping.

An August Bank Holiday camp is being arranged by the Amateur Camping Club at Ashdown Forest Sussex. The Nottingham District Association has also arranged a meeting at Willoughby, Ollerston. Large attendances are anticipated. Non-members interested in the fascinating pastime should communicate with the hon. sec., whose address is 4, New Union Street, Moorgate Street, E.C.

The Auto Cycle Union and the Army Manœuvres.

A number of motor cyclists will be required to do duty with the directing and umpire staffs during the forthcoming army manœuvres on the 16th and 22nd September. The rates of allowance will be as follows: (a.) Third class railway fare for riders and rail conveyance for their motor cycles between their homes and the manœuvre area. (b.) Cost of messing whilst in camp, or payment of bills for food and lodging at hotels. (c.) Special allowance of 6s. 6d. per diem, not including days on which train journeys only are performed, to cover cost of petrol and upkeep of motor cycle, including insurance of machine against accidents. Motor cyclists wishing to place themselves at the disposal of the War Office should make application to the Auto Cycle Union, R.A.C. Buildings, Pall Mall, S.W.

Erratum.

E. V. Stevens is the T.T. competitor still in the Ramsey Hospital. He rode a Dot in practice. Last week we confused his initials with A. J. Stevens, who successfully rode one of the three-speed chain-driven A.J.S. machines in the Junior Race.

Leaving the
Hull control in
the Hull and
East Riding
A.C.C.
Twelve Hours'
Reliability
Trial on
Thursday last.

BROOKLANDS JULY MEETING.

As usual, most brilliant weather favoured the Brooklands mid-week meeting. The sun was blazing hot, but some relief was granted by a stiff breeze, which, blowing down the finishing straight, made itself rather unpleasantly felt by riders upon emerging from behind the members' bridge, where the wind smites them broadside on, and causes them to be swept up the banking. The two motor cycle events on the programme were well patronised, bringing forward respectively nineteen and seventeen starters. Additional interest was lent to both events by the fact that in them Jake de Rosier and C. R. Collier were afforded an opportunity of fighting their championship battles over again, and as they started practically level in both cases, these riders were followed with great interest.

The following started in the Third Short Motor Cycle Handicap, over a distance of $5\frac{3}{4}$ miles, the winner receiving £10, second £5, and third £3, or cups at option:

	m. s.
J. de Rosier (994 c.c. Indian) ...	Scr.
C. R. Collier (984 c.c. Matchless) ...	2
H. A. Collier (580 c.c. Matchless) ...	44
S. T. Tessier (580 c.c. Bat) ...	1 6
Gordon Bell (580 c.c. Bat) ...	1 6
G. E. Stanley (499 c.c. Singer) ...	1 8
F. A. MacNab (492 c.c. Trump) ...	1 14
R. N. Stewart (492 c.c. Trump) ...	1 14
H. Martin (345 c.c. Martin) ...	1 20
A. Baker White (488 c.c. Trump) ...	1 24
J. R. Haswell (499 c.c. Triumph) ...	1 32
A. S. McIntyre (499 c.c. Triumph) ...	1 40
J. G. Birch (499 c.c. Triumph) ...	1 46
V. Wadham (488 c.c. Zenith) ...	1 46
H. Shanks (340 c.c. Kingfisher) ...	1 52
J. Gibson (295 c.c. Martin-Jap) ...	1 52
A. G. Jeffcott (295 c.c. Singer) ...	2 36
G. Lee Temple (295 c.c. Singer) ...	2 36
G. B. S. McBain (340 c.c. Douglas) ...	3 8

De Rosier had picked up over forty yards on Collier by the time these two reached the railway, and from this point onward they had a fine struggle, in which Collier managed to take a leaf out of Jake's own book, and for once in a way let the champion do a little of his wind cutting. The T.T. Bats showed themselves possessed of a fine turn of speed, especially Gordon Bell's, for, in spite of his belt breaking when he was half way down the finishing straight, he managed to win by a good forty yards, largely owing to the strong following wind he had. Tessier ran second, and C. R. Collier, who had managed to nip out from behind Jake and overhaul him at the fork, had a good scrap with Haswell for third place, which he got by about a length, with de Rosier running fifth, about the same distance behind Haswell. Speed, $64\frac{1}{2}$ m.p.h.

The Second Event.

The Third Long Motor Cycle Race (a handicap); distance, $8\frac{1}{2}$ miles; winner £10, second £5, third

£3, or cup at option. The entrants were the same as in the previous race except that McBain and Birch did not ride. Gordon Bell was penalised thirty-six seconds for winning the previous race, and he, therefore, had to give away three seconds to H. A. Collier. The result of the race was much the same as before, except that the back-markers were rather handicapped out of it. As might have been expected, Tessier (1m. 39s.) on his original handicap came home an easy first by 100 yards, with Haswell (2m. 18s.) second by the same distance from Gordon Bell (1m. 3s.). Martin arrived a good fourth—a very creditable performance considering his "tea-cup" motor.

The Jake de Rosier-Collier scrap was just a reversal of what had happened a few minutes before. Hanging behind Collier, Jake kept clear of the Matchless back wheel, and after a couple of laps swung out at the fork and got home twenty yards ahead of the Englishman.

It would be interesting to know what explanation there is for the fact that, unlike all the Brooklands machines—both cars and motor cycles—and contrary to the expressed regulations of the track, Jake de Rosier is allowed to ride a machine with open exhausts.

A HAPPY TRIO.

The winners of last week's Brooklands motor cycle handicaps. S. T. Tessier and Gordon Bell, who rode 5 h.p. Bat-Japs. A. J. Luce, the owner of the machine ridden by Bell, is at the extreme left.

CLUB NEWS.

Twenty-first anniversary picnic and ladies' day of the Gloucester City Cycling Club, in which the newly-formed motor cycle section took part.

Norfolk M.C.C.

The result of the 200 miles reliability trial held recently by the above club was: 1. C. Duberley ($3\frac{1}{2}$ h.p. Ariel); 2. B. Horner ($3\frac{1}{2}$ h.p. Ariel) and A. Milligan (7 h.p. Indian); 3. R. O. Clarke ($2\frac{1}{2}$ h.p. F.N. and sidecar). Mrs. F. Flanders, who finished eighth on her $2\frac{1}{2}$ h.p. Douglas, was the only lady competitor. The start was from Gorleston-on-Sea station at 7 a.m., the first stop being at Cromer for breakfast. From here they proceeded to Ely for luncheon, and on through Bury St. Edmunds and Beccles, finishing again at Gorleston.

Leeds M.C.C.

The result of the sixth Leeds to Edinburgh and back competition held on July 15th and 16th was: 1. Jas. R. Kelly ($3\frac{1}{2}$ Rex) and H. Wilkinson ($3\frac{1}{2}$ Scott), tie for Langton Cup, both losing 25 points; 2. P. H. Cockroft ($3\frac{1}{2}$ Triumph), and G. Fenton ($3\frac{1}{2}$ Zenith-Gradua), gold medals, both lost 30 points; 4. C. P. Finn ($2\frac{3}{4}$ Enfield), bronze medal, lost 33 points; 5. J. Campbell Gray ($3\frac{1}{2}$ Rover), bronze medal, lost 37 points; 6. J. W. Delmore ($3\frac{1}{2}$ Rover), bronze medal, lost 39 points; 7. F. W. Roberts ($3\frac{1}{2}$ Singer), bronze medal, lost 47 points. Eighteen others lost over 50 points.

Sidecar Class.—1. S. H. Baker (5 Rex), gold medal, lost 56 points; 2. J. H. Gash (5 B.G.), gold medal, lost 63 points.

Car Class.—J. C. Stewart (Humber) and R. Smith (Ford), both tie for Winn trophy, losing 32 points.

Finsbury Park C.C. (Motor Cycle Section).

It is gratifying to hear that this popular cycling club has now inaugurated a motor cycle section, which has been joined already by several members, and bids fair to become a most successful undertaking. Runs have been arranged for all Saturday afternoons, as well as several week-end and holiday tours. Any motor cyclists in the neighbourhood who may be interested should communicate with R. Gordon Barrett, 54, Florence Road, Stroud Green, N.

Westmorland M.C.C.

In conjunction with the Cumberland M.C.C., the club held a very successful speed trial on the 15th July, and through the kindness of the Right Hon. the Earl of Lonsdale was enabled to make use of half a mile in Lowther Park. A flying start was allowed, and timing was by the telephone. Results:

SINGLE CLASS.

		Fig. of merit.
1.	H. B. Little ($3\frac{1}{2}$ h.p. Rudge) ...	45.00
2.	I. M. Somervell ($3\frac{1}{2}$ h.p. Triumph) ...	46.22
3.	Hal Harrison ($3\frac{1}{2}$ h.p. Rudge) ...	46.24

TWIN CLASS.

1.	E. F. Orton ($2\frac{3}{4}$ h.p. Douglas) ...	56.00
2.	I. W. Nelson ($3\frac{1}{2}$ h.p. Scott) ...	56.6
3.	R. Shaw ($3\frac{1}{2}$ h.p. Scott) ...	61.00

Fastest time of the day by W. Westwood ($3\frac{1}{2}$ h.p. Triumph), 30gs.

BRADFORD M.C.C. RELIABILITY TRIAL TO DUNBAR AND BACK LAST WEEK-END.

The Hkley team: C. Thackeray ($3\frac{1}{2}$ h.p. J.A.P.), A. Drummond (5 h.p. Rex), and A. Denby ($3\frac{1}{2}$ h.p. Rudge).

The Leeds M.C.C. team: W. Tetley, G. E. Crossley, and G. E. Sharp, all on $3\frac{1}{2}$ h.p. Rovers.

Club News.—

Aspatia College M.C.C.

For the hill-climb on the 8th inst., up Isel Hill, near Cocker-mouth, the club was entertained to tea at Isel Hall by Sir Wilfred Lawson, who was not present owing to his Parliamentary duties, and later to supper by Mr. and Mrs. Hill at Ellenbank. The results were as follows:

Rider and machine.	Time.	Fig. of merit.
*1. K. M. C. Neill ($3\frac{1}{2}$ Zenith) ...	65 $\frac{1}{2}$ s. ...	86.4
2. R. S. Biscoe ($3\frac{1}{2}$ Bradbury) ...	66s. ...	105.0
3. H. C. Webb (5 Indian) ...	70s. ...	110.
4. J. R. Robinson ($3\frac{1}{2}$ Humber) ...	90s. ...	111.

Fastest time, K. M. C. Neill ($3\frac{1}{2}$ Zenith), 63 $\frac{1}{2}$ s.

Two tyre covers were presented as prizes by the Kempshall Tyre Co.

PONTEFRACT M.C.C. 12 HOURS RELIABILITY TRIAL.

The first competitors to check at Harrogate, where tea was taken. On the right is Colonel J. R. Shaw (Ex-mayor of Pontefract and president of the club) and E. Lee, who both rode Scotts.

The winner on the only passenger machine entered—H. Craven and his 8 h.p. three-speed Chater Lea-Jap and sidecar—who is seen starting from the Harrogate control on the return journey.

Competitors in the Bradford M.C.C. Reliability Trial to Dunbar and back. J. R. Kelly ($2\frac{1}{2}$ h.p. Enfield), Norman Longfield ($3\frac{1}{2}$ h.p. Scott and s.c.), and two Rover riders.

Ceylon M.C.C.

In Coronation week some twenty motor cyclists in Colombo met and formed the Ceylon Motor Cycle Club, and since then the membership has increased to forty-nine. The subscription is 10s. a year with an entrance fee of 5s.; the first fifty members being exempt from the latter. The hon. sec. is A. T. G. Gardner, Shamrock, Horton Place, Colombo.

York County M.C.C.

The awards in the two days' run from Leeds to Edinburgh and back, held on July 15th and 16th, were: 1, H. Wilkinson ($3\frac{1}{2}$ h.p. Scott), cup; 2, G. Fenton ($3\frac{1}{2}$ h.p. Zenith Gradua), gold medal, and P. H. Cockcroft ($3\frac{1}{2}$ h.p. Triumph), gold medal; 4, G. Spence ($3\frac{1}{2}$ h.p. Premier), gold medal; 5, R. Ellis ($3\frac{1}{2}$ h.p. B.S.A.), silver medal; 6, R. Glenn ($3\frac{1}{2}$ h.p. Triumph), silver medal; 7, W. E. Asquith ($3\frac{1}{2}$ h.p. Triumph), silver medal; 8, Harry Sykes ($3\frac{1}{2}$ h.p. Rover), silver medal; 9, Langton ($3\frac{1}{2}$ h.p. Triumph), silver medal. The twelve hours' reliability run will be held on July 30th over a 200 miles course, from Leeds to Keswick and back.

Willesden Green C. and M.C.C.

The result of the trial to Coventry and back resulted in a win for A. W. Loughlin ($3\frac{1}{2}$ h.p. Peugeot); second J. C. Ball ($3\frac{1}{2}$ h.p. N.S.U.), and third C. N. Safford ($3\frac{1}{2}$ h.p. Humber). W. Stennett ($3\frac{1}{2}$ h.p. Triumph) and H. Wilson (Bat and sidecar) were gold medal winners, not losing more than ten per cent. of points. Great praise is due to the committee for the way the course was marshalled and marked; not one competitor left the course. The next trial will be over a secret course on August 13th.

Taunton and District M.C.C.

On the 13th inst. the club had a very successful members hill-climb on Buncombe Hill, for which thirty-five entries were received. The results were as follows:

LIGHTWEIGHT.

	M. S.
1. H. F. Potter ($2\frac{1}{2}$ Enfield) ...	X
2. R. C. Westlake ($2\frac{1}{2}$ Enfield) ...	0 33 $\frac{1}{2}$ slow
3. F. G. Arnold ($2\frac{1}{2}$ Motosacoche) ...	0 36 $\frac{1}{2}$ slow

Six competed.

HEAVYWEIGHT.

	M. S.
*1. C. R. Roper ($3\frac{1}{2}$ Triumph) ...	X
2. A. E. Hemfry ($3\frac{1}{2}$ Triumph) ...	0 12 slow
3. W. E. Phillips ($3\frac{1}{2}$ Triumph) ...	0 14 $\frac{1}{2}$ slow

Eight competed.

FLEXIBILITY.

1. W. G. Potter ($3\frac{1}{2}$ P. and M.) ...	5 36 $\frac{1}{2}$ variation
2. S. Nutt (5 Rex) ...	4 48 $\frac{1}{2}$ variation
3. C. R. Roper ($3\frac{1}{2}$ Triumph) ...	4 9 $\frac{1}{2}$ variation

Twelve competed.

* Fastest time of the day.

Club News.—

Cape Peninsula M.C.C.

There were nine competitors in the Coronation Day consumption contest round the mountain, a distance of a little over thirty miles. Results:

Rider and machine.	Combined weight, of Pounds.	Consumption, of Ounces.	Figure Merit
1. H. Kunne (3½ Triumph) ...	402½	35	11.5
2. A. Douglas (3½ Triumph) ...	334½	38	8.99
3. T. R. Butler (3½ Zenith-Gradua) ...	358½	43	8.33
4. W. H. Eastoe (3½ Bradbury) ...	442	56	7.89
5. R. H. M. Hill (3½ Ariel) ...	341½	48	7.54
6. J. Thornton (3½ Bradbury) ...	364	50	7.28

The winner's time was 1h. 38m.

Edinburgh and District M.C.

A novel and successful motor cycle trial was recently carried out in the form of a non-stop reliability trial and petrol consumption contest over a selected course which the

REDDITCH M.C.C. HILL-CLIMB, which is to be re-run owing to a timekeeper's watch varying.

Weighing competitors' machines at the foot of Willersey Hill.

competitors had to traverse ten times. Any stop whatever, except compulsorily caused by traffic, was sufficient to disqualify. Amongst the competing machines were a number of well-known makes with engines of varying sizes and capacities, each having different allowances for petrol consumption, and a standard time was fixed for the completion of each circuit of the course with a maximum and minimum variation of three seconds only. It can be readily understood that with such stringent regulations many competitors failed to survive, and in the end only two finished, both of them riders of Ariel 3½ h.p. machines. The winner, A. F. Downie, was closest to schedule on time, showing a petrol consumption equal to 130 miles per gallon.

On July 15th a closed speed contest was held on Dolphinton Moor, when some very fast speeds were attained. Class winners:

Class I. (one mile).—A. B. Lindsay (3½ h.p. T.T. Triumph).

Class II. (one mile).—R. S. Smith (8 h.p. Bat).

Class III. (one mile).—R. S. Smith (8 h.p. Bat).

Class IV. (one-third mile flexibility).

Class V.—A. H. Alexander beat R. S. Smith.

Position on formula.

Fig. of merit.

1. A. H. Alexander (7 h.p. Indian) ...	8.60
2. D. Dobson (5 h.p. Indian) ...	5.62
3. A. F. Downie (3½ h.p. Ariel) ...	5.42

Bolton and District M.C.C.

For the annual hill-climb next Saturday competitors meet at headquarters at two o'clock prompt. Four classes will be represented, the fourth being for non-members.

Aunman Valley and District M.C.

At the hill-climbing contest held on July 13th in ideal weather on the Black Mountains, there was a good attendance, and some excellent sport.

The hill is a difficult one with some exceptionally bad corners, and is the same as was used by the Welsh Automobile Club on July 1st. Results:

OPEN CLASS.

Time.

Luther Davies, Garnant (3½ h.p. James),	2m. 58½s.
Handel Davies (3½ h.p. Rex) ...	3m. 32½s.
Dd. J. Llewelyn (3½ h.p. Triumph) ...	3m. 50s.
J. A. Morgan (3½ h.p. Rex) ...	3m. 58½s.
Lewis M. Davies (3½ h.p. Rex),	4m. 32s.

Cumberland County M.C.C. (Western Section).

The twice postponed reliability trial of the above club for prizes presented by Messrs. Quirk, of Keswick, and Messrs. Stout, of Egremont, was run off on July 16th, and resulted as follows:

1. H. Cook (3½ h.p. Bradbury).
2. H. Johnston (3½ h.p. Rover).
3. J. Davidson (3½ h.p. Triumph).

There were nine starters.

It is proposed to hold a reliability run to Harrogate and back on August 6th and 7th to decide the holder of the challenge cup presented by the proprietors of the Pheasant Hotel, Bassenthwaite. Members wishing to take part should send in their names as soon as possible to H. Braithwaite, joint hon. sec., West Croft, Egremont, Cumberland.

L. L. Sealey (3½ b.p. B.S.A.) at the bad corner. This rider is supposed to have made fastest time.

Redditch and District M.C.C.

The run to Willersey proved a very successful day's outing. A hill-climbing competition was held, and very fast riding and fine corner work was witnessed. A timekeeper was stationed at each end of the course, but owing to the stop watch varying from some unaccountable cause, the committee made no awards, but decided to run the event again early in August.

A move was made to Bidford-on-Avon for lunch, nearly thirty members taking part.

Tyre Successes.

At Much Wenlock riders of Dunlop tyres won four classes.

Prepared Patches for Air Tubes.

The Severn Rubber Co., 94, Newhall Street, Birmingham, are makers of some excellent patches for motor cycle tyres. These patches are specially backed and prepared to render them adhesive; they

**A WONDERFUL PERFORMANCE.**

R. O. Clark, who successfully drove a 2½ h.p. two-speed F.N. with sidecar and 12-stone passenger in the Norfolk M.C.C. 200 Miles Reliability Trial, at the schedule speed of 20 m.p.h.

also have bevelled edges, which make them lie closely to the surface of the tube.

Enterprise.

British manufacturers are often accused of lack of enterprise in connection with the printing of catalogues, etc., the accusation being that they do not send out printed matter in other languages than their own. Rudge-Whitworth, Ltd., Coventry, is one exception to the rule, and doubtless there are many others. The above firm is exhibiting motor cycles at the Turin Exhibition, and in connection with the exhibits has prepared a booklet for distribution to visitors printed in English, French, German, and Italian.

A Special Shaped Toolbag.

We have received from Messrs. H. Taylor and Co., 21a, Store Street, Tottenham Court Road, W., a toolbag of considerable length, so designed that it can be fitted underneath the carrier in front of the ordinary hanging toolbag. This space in most machines is absolutely wasted, and the bag in question is designed to allow of the transport of considerably longer tools than can be carried in the ordinary pannier or hanging bag. Undoubtedly, it is a great advantage, not only because longer tyre levers can be carried, but also because there are many machines on the market whose kit must contain a hammer for the easy adjustment of their pulleys. When not used for other tools it forms a very convenient receptacle for spare inner tubes.

**A Rubber Preservative.**

W. Green, 92, Crescent Road, Plumstead, Kent, has submitted to us a sample of a preparation for preserving and softening indianrubber. It is claimed that if the outsides of tyre covers and inner tubes are occasionally treated with the liquid they will never become hard or lose their elasticity. Samples of partly-perished sheet rubber, both before and after treatment, have been submitted to us, which substantiate the claims made for this preparation.

Catalogues Received.

The latest catalogue of New Hudson motor cycles is a greatly enlarged edition containing, in addition to illustrations of the machines, valuable hints and part sectional drawings of the three-speed gear, which is one of the leading features of these machines. Copies may be obtained from the New Hudson Cycle Co., Ltd., Summerhill Street, Birmingham.

The Lady Motor Cyclist and her Apparel.

Realising the fact that motor cycling among ladies is gaining ground, the Service Co., Ltd., 292-293, High Holborn, W.C., has placed upon the market a long lady's macintosh with wind cuffs and belt, which is a really serviceable looking garment; also several types of chamois leather waistcoats and tan leather waistcoats, which may be had with or without sleeves. Naturally, these articles of clothing are equally suitable for ladies who ride as passengers in sidecars.

Lubrication.

The list of notable successes achieved by riders using Huile de Luxe lubricating oil is too lengthy for us to publish *in extenso*, but we may say that a very large number of the most prominent men on road and track use this lubricant. Very few, if any, competitions are held in which the peculiar and not unpleasant odour this oil imparts to the exhaust gases is not noticed by spectators and competitors alike. It was first introduced in the T.T. Race two years ago, and has been in remarkable demand ever since.

A New Model.

A comparatively new model is the Ruby, sold by the Royal Ruby Cycle Co., Great Ancoats Street, Manchester. It is a

The 3½ h.p. Ruby Cob touring model fitted with L.M.C. engine.

low built 3½ h.p. machine, the top tube being but 27in. from the ground.

Racing Motor Cyclists' Apparel.

The tight fitting leather suit which Jake de Rosier wore in his match with C. R. Collier was designed and made by Messrs. Dunhills, of "Motorities" fame. It is very light, and made in such a way that it can be worn close fitting, or let out to take padding. It should be a popular and suitable dress for all racing motor cyclists.

CONSUMPTION CONTEST AT THE CAPE.

Assembling in the Greenmarket Square for the first consumption trial of the Cape Peninsula Motor Cycle Club. (See Club News pages.)

"H. A. Collier's Matchless was absolutely spotless after the race. There was not a sign of oil on the engine, and only the finest sprinkling of dust on the frame. The piston was devoid of carbon deposit."—*Motor Cycling.*

"The engine of his Matchless Twin was as clean at the end of the race as at the start. The new six-speed gear appeared to be in perfect order."—*Motor Cycling.*

"C. R. Collier hove in sight, his Matchless twin running magnificently."—*Motor Cycling.*

"C. R. Collier made a remarkable last lap."—*Motor Cycling.*

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns First 14 words or less 1/6, and 1d. per word after. Each paragraph is charged separately. Name and address must be counted. In the case of Trade Advertisements a series of thirteen insertions is charged as twelve.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," Coventry, or London (20, Tudor Street, E.C.), by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should state distinctly under what heading and in what issue the announcement appeared.

CLASSIFICATION BY LOCALITY.

For the convenience of purchasers of second-hand motor cycles, the advertisements are classified into districts, as many readers like to know what machines are for sale in their immediate neighbourhood before going further afield.

Plan showing division of England into Sections.

SECTION I.
Northumberland, Cumberland, Durham, and Westmoreland.

SECTION II.
York and Lancashire.

SECTION III.
Carnarvon, Denbigh, Flint, Cheshire, Derby, Stafford, Shropshire, Montgomery, and Merioneth.

Telegrams: "Opificier, London."

*Phone: 5777 Holborn.

IMPORTANT NOTICE.

Owing to the August Bank Holiday, the issue of "The Motor Cycle" for August 10th. will be closed for press earlier than usual. All copy and instructions for paragraph advertisements in this issue must therefore be in our hands at Coventry not later than first post on Thursday, August 3rd.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, 2d. will be charged for registration and three stamped and addressed envelopes must be sent for forwarding replies. Only the number will appear in the advertisement. Replies should be addressed, "No. 000, c/o 'The Motor Cycle,' Coventry"; or if "London" is added to the address, then to the number given, c/o "The Motor Cycle," 20, Tudor Street, E.C.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but if not we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions exceeding £10 in value, a deposit fee of 6d. is charged, when under £10 the fee is 1s. All deposit matters are dealt with at Coventry, and cheques and money orders should be made payable to Hiffe and Sons Limited.

SPECIAL NOTE

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR BICYCLES FOR SALE.

SECTION I.

Northumberland, Cumberland, Durham, and Westmoreland.

EXCELSIOR, 3 1/2 h.p., De Dion engine, in good order £11, or near offer.—Hyslop, Rigg, Carlisle.

3 1/2 h.p. Singer, magneto, B. and B. carburettor, and 34 Whittle belt; £18.—Park, Milnthorpe, Westmorland.

2 h.p. 1911 Single Moto-Reve, good condition; owner going abroad, nearly new.—Whitaker, Linthwaite Bowness.

1910 Free Engine Triumph, perfect condition; any trial and examination: £42.—1, Market Place Egremont, Cumberland.

PHILON-MOORE (September, 1910), with Fulford spring wheel sidecar; cost £72, accept £47.—K. Riverside, Ambleside.

TRIUMPHS, Humbers, B.S.A., Royal Enfield motor cycles, lightweight, 2 speeds, free engines; write wire, or 'phone for immediate deliveries.—Turvey and Co., The Motor House, Sunderland. Tel.: No. 626.

3 1/2 h.p. Triumph, Roe 2-speed gear and free engine £32 1911, practically new, with Millford cast steering sidecar; owner just bought, but is now going in for a car; what offers?—D., c/o Turvey and Co., Mole Garage, Sunderland.

3 1/2 h.p. 1910 Triumph, only ridden 950 miles, practically no worse than new; for quick sale accept £35.—Turvey and Co., Motor Garage, Sunderland.

1911 Standard Triumph, free engine Rover and Douglas lightweight, in stock, all absolutely new first cheque secured.—Ston's Garage, Egremont, Cumberland.

TRIUMPH, 1910, £33. Palmer cords, horn, tool spare parts, brand new spare tyre, never used, new spare studded cover, never used, Brooks belt carrier splendid condition, good as new.—Thompson, 53, Windor Ar., Blyth, Northumberland.

SECTION II.

York and Lancashire.

TRIUMPH, 1909, not run 1,000 miles, as new.—King, Wigginton, York.

ROVER, 2 1/2 h.p., magneto, new, tyres; £15.—Aldred, 241, Middleton Rd., Oldham.

IMMEDIATE DELIVERY.

CHEMICO MOTOR

BIKE

OIL

LUBRICATION is a matter of utmost importance to the motor cyclist, and an item which is apt to be too lightly considered. You cannot give too much attention to this, or exercise too much care in the selection of a suitable oil.

CHEMICO MOTOR BIKE OIL

has had our careful attention, coupled with our wide knowledge of oil, exercised in its production, which with every confidence we recommend, CHEMICO MOTOR BIKE OIL is exceptionally high in flashpoint, will not carbonise the valves, or soot the plug, but will circulate everywhere necessary and keep the engine perfectly cool.
WE URGE every motor cyclist to test CHEMICO MOTOR BIKE OIL, and give attention to the running of the engine during test

Note how sweetly it runs and how clean the valves keep.

Complete £5 : 5 : 0 Complete

FARRAR'S HALIFAX SIDECARS.

Absolutely the finest value on the market.

LESS POWER.

It is admitted by experts that, owing to the unique design, far less power is required to propel Farrar's Sidecars than any other style on the market.

NOTE OUR front arm which grips the sidecar CENTRE. Nothing lopsided about this attachment.

All our Sidecars are now fitted with Farrar's quick detachable joints and cranked back axles, refinements found on very few other makes.

MODEL "DE LUXE"	£5 5
MODEL "C," with cane body	£6 0
MODEL "D," with coach-built body	£7 0

HELLESEN

World Famous

Dry Batteries

M.C. size.
6-6 only.

UNDOUBTEDLY

the most reliable dry battery made proved by the fact that not only are they used by the British but also by several Foreign and Colonial Governments

SAVE MONEY

by installing on your motor cycle or car

The H.H. HELLESEN DRY BATTERY SYSTEM

you will find it far more satisfactory than acid-filled accumulators, for not only is the "HELLESEN" cheaper in first cost but it costs you nothing whatever to maintain—in fact after once fitted you need not give it a thought.

REMEMBER THAT

a special coil is not always necessary, merely send us brief particulars as to the ignition as now fitted on your motor cycle or car and we will advise and help you willingly and gratis too.

SIDECAR COMBINATIONS.

F.N., 4-cyl., 2-speed, Chater-Lea sidecar, ty new, accessories, tools, spares, overalls; having car; £35.—Davis, c/o G. Beaton and Son James Sq., Notting Hill, London, W.

HUMBER, 31-h.p., 1910, 2-speed, Mills-Finford spring wheel sidecar, Cowey speedometer, V belt, 2 lamps, horn, tool box, condition new; any £45.—W.P., 21, Manor Gardens, Holloway, N.

5-h.p. 1910 Rex de Luxe, 2-speed, free engine, neto, Whittle, Chater-Lea sidecar, all new in perfect condition, ready for road, all accessories £45.—Masters, 7, Shakespeare Rd., Herne Hill.

4-h.p. F.N. and sidecar, splendid pulley, low engine overhauled, gear new, speedometer, strong rigid sidecar; bargain, £22/10, lowest, change cheap machine part.—12, King St., Twickenham.

CLYNO, 5-h.p., 2-speed, chain drive, foot start machine last May, only run 1,000 miles, in condition, climb anything, Montgomery sidecar, to body; lowest £25.—Chirney, Station Rd., Harpenden.

POWERFUL 4-h.p. Motor Cycle, grand climber, new, large sidecar, Whittle belt, adjustable h.b.c., excellent tyres, Bates studded, Palmer cord trial; first £16 secures.—Hope Villa, Pretoria Rd., Ford.

1909 5-h.p. Rex de Luxe, free and 2-speed, M. castor £12 sidecar, lamp, horn, watch, spare tube, valve, etc., just bushed and overhauled, in condition; £40, or near offer.—G., 89, New Rd., Wiche.

31-h.p. Triumph, free engine, 1910, bought from 1911 improvements added, sidecar brought May Chater fittings; £47/10.—Sunnymede, The Avenue, well Hill, N.

31-h.p. Quadrant, B. and B. control, new Lycet 2 and Palmer cord tyres, sidecar and mazi a splendid order, and ready for immediate use; trial given; £25.—Forest, 22, Somers Rd., Waltham Tel.: 275 Walthamstow.

1911 Dot-Jap, 8-h.p., and sidecar, Lake and 2-speed free engine, handle starting, B. and all accessories and spares, new April; cost £80; wants seeing; sell, £65; no offers; good reason; Berkley Av., Levenshulme, Manchester.

LIGHTWEIGHT Rex and special juvenile sidecar, Bosch magneto, Amac carburettor, extra valve adjustable pulley, will demonstrate with passenger Peppers Hill, New Cross, to intending purchaser; a bargain.—Photographer, 167, Old Kent Rd., S.E.

5-h.p. Vindec, 2 speeds, free engine, tyres nearly V. Whittle belt, Amac carburettor, magneto ign. Cowey speedometer, new adjustable pulley, F.R.S. and castor wheel sidecar, finished grey enamel; given; price £37/10.—Roffe, 81, Crown Lane, Ber Kent.

MATCHLESS-J.A.P., 1911, 8-h.p., standard fixed engine, lamp, horn, Cowey speedometer and spares, and sidecar, absolutely new condition, unspratched, two months old, ridden 1,000 miles; £75, will accept £60, or near offer; any trial; buying car.—W. Foreman, "Bird-in-Hand," Bro Kent.

QUADCARS.

PHOENIX Quadcar, 7-h.p. Fafnir, just overhauled, King, motor agent, Great Missenden.

PHOENIX Quadcar, 7-h.p., in good running condition, offers wanted.—Benny's Garage, Camborne.

TWO Small Chassis, with wheels and steering suitable for runabout; £10 each.—Porter, b Tottenham.

PHOENIX Quadcar, excellent condition, Bosch ignition; accept £25 for quick sale.—Osborn, Leigh, Surrey.

SUNBEAM Monocar, 2 speeds, De Dion engine, cooled, £18; 31-h.p. Rex, £10; excellent condition.—Davies, Motor Stores, Morriston, Glam.

PHOENIX Quadcar, 7-h.p., Fafnir, water-cooled, neto, splendid condition; 30 guineas, exchange with or Bradbury.—Gealy, Tumble, Llanelly, Wal.

6-h.p. Monocar, fitted with J.A.P. engine, Bosch neto, 3-speed gear box, live axle; £65, or consider exchange twin motor cycle and sidecar.—Westbourne Grove, W.

PHOENIX Quadcar, 7-h.p. twin-cylinder water-cooled engine, 2-speed and reverse, in good condition, offers wanted for cash or exchange.—Seen at H Bros., Ltd., 1, King St., Maidstone.

MOTOR TRICYCLES AND RUNABOUTS.

24-h.p. De Dion Tricycle, free engine, handle start footboards, good condition; bargain, £15 61, Oxford St., Wellingborough.

31-h.p. Brown Special Tricycle, could be used extra passenger or luggage, special good car tyre on back wheel, magneto, 2-speed gear; £70; in good order; £20.—Timberlake's Garage, W.

TRAILERS.

TRAILER, Millford, little used; cost 12 gu offers.—Williams, Woodley, Romsey, Hampsh

Silence.

THE oft-quoted adage that silence is golden has its application to-day in respect of motor cycles, more pertinently, perhaps, than in the particular circumstances in which the aphorism was first conceived in the brain of its maker. The virtues of silence in motor cycles is not a new subject, and has been animadverted upon in the pages of *The Motor Cycle* almost to a point of wearisome reiteration, but no unbiassed person can deny that most motor cycles are unpleasantly noisy, and forfeit a large measure of popularity, which would otherwise have a most encouraging effect upon the progress of the industry. The same degree of improvement in the attainment of silent running in modern motor cars is by no means apparent in the case of the motor cycle, and in this respect more than any other vehicle used for purposes of pleasure, it has to suffer for the shortcomings of its designers. For a vehicle that occupies so small a space on the roads and pursues its speedy way without raising the ire of passers by against blinding clouds of gritty dust and the emission of noisome fumes of vaporised oil, the motor cycle still, both on the country roads and the busy streets, lacks the unqualified approval of the public, purely by reason of the sharp, irritating noise of its exhaust. Every explosion fastens itself on the unwilling ears of the neighbourhood; some machines are worse than others, whether they are fitted with silencers or not, but a deplorable feature of the evil, we are sorry to observe, is that the fault lies in the indifference of the riders.

An absolutely inaudible exhaust may still be an unrealised ideal, but that there are means of reducing noise to a minimum which will hardly offend the tenderest sensibilities of the public there is no doubt.

We have heard single-cylindered motor cycles cooing like the dove, and whether this desirable consummation was due to some specially fitted silencer or to some inherent excellence of the engine, we should prefer not to commit ourselves. The impression, however, was rather that the prevalence of this offensive noise may be attributed in some measure to the point of view from which the rider regards the susceptibilities of the public. This is not the place to embark upon any technical dissertation on the subject of efficient silencers—all that we desire to do is to instil into the hearts of our readers who ride, a compassionate consideration for the weakening nerves of this peace-loving generation. The spirit of democracy is abroad in the land, and with it goes hand in hand a total indifference to the personal comfort and well being of anyone but the individual for himself. This unfortunate phase is exemplified in that most despicable type of road cad who charges through towns and villages with an open exhaust at any hour of the night or day, and excites a prejudice which takes years to dissipate.

The craze for the utmost limit of power an engine can only give by having its exhaust unchecked by a silencer is not wholly excusable, though the temptation is admittedly a strong one, and in the enjoyment of speed all other considerations are forgotten. Motor cyclists are daily increasing in numbers all over the country, the restraints imposed by distance are rapidly disappearing, and few, indeed, are the places in which the "teuf-teuf" of the exhaust has never been heard. We would, therefore, exhort all whom it may concern to make their enjoyment commensurate with a chivalrous regard for the comforts of the communities in which they find themselves.

EQUIPPING THE SIDE CAR

Sidney R. Jones

THERE is hardly any doubt that the sidecar is theoretically a bad means, quite possibly the worst, for carrying a passenger with a motor cycle, but for all that it has so many practical advantages that it has fairly gripped the popular esteem, and, judging by the number of passenger

has to be aligned, it is quite common to find that this procedure has been carried out inaccurately, although it is quite a simple matter, and when once accomplished requires no further attention.

How to Set the Wheels in Alignment.

The easiest way to do it is to get a couple of lengths of string and stretch them tightly between pegs about 9in. high driven in the ground, and so placed that one string just touches two points on the wall of the back motor cycle tyre, whilst the other applies in a similar manner to the tyre of the sidecar. The latter must then be adjusted so that the two pieces of string are perfectly parallel. Long straight boards supported by bricks can be used instead of string, and are rather better if anything for the purpose. With a castor wheel sidecar alignment is, of course, unnecessary. Theoretically, there is only one position in which the sidecar can be properly attached to the

on the driving tyre and not on that of the sidecar wheel. In turning a corner with the axles placed non-symmetrically, it is obvious that either the back wheel or sidecar wheel must slip to a certain extent. An idle wheel rolling over the ground is far less susceptible to skid in any form

Fig. 1.—Basket without shackles.

motor cycles which are met on the road, it may be said that at present there is a boom in this type of vehicle. Very few motor cyclists, however, according to the writer's opinion, get anything like the best out of their sidecars, and in the following article it is proposed to show how this desirable end can be achieved.

First of all with regard to alignment. Failure to get this correctly set out is a very common cause of tyre wear. Some sidecars are sent out from the manufacturer with the clips fixed in the vertical plane so that no alignment is necessary; but, on the other hand, a good proportion of sidecars are not so sent out, and have to be set in alignment by the purchaser. The fixed clip idea is very excellent as far as it goes, the only

Fig. 4.—Flat luggage case under chair.

than a wheel through which the propulsive effort is being transmitted, and hence it is the sidecar wheel which holds the ground and the back motor cycle wheel which slips, and it is in the avoidance of this trouble that the castor wheel sidecar has its principal advantage. On the other hand, it does not, like the rigid sidecar, act as a preventive of skidding.

Position of the Basket.

One of our staff has made a point of trying every sidecar that he can get permission to climb into, and the result of this experience is the statement that ninety-nine out of every hundred sidecar seats are not half as comfortable as they might be. The fact is that the man who buys the sidecar and fixes it up very rarely has to ride in it, and the friend who does so is generally so unmechanically minded as to be ignorant of how matters might be improved. Nearly all sidecar chairs are perched up much too high, and as a

Fig. 3.—Suit case carried on luggage board.

motor cycle, and that is the one in which the centre line of the sidecar wheel axle is a direct production of that of the back wheel of the motor cycle. If so arranged, the rigid wheel sidecar satisfies the requirements for correct steering, as in any position the centre lines of all three wheel axles, if produced, meet in the point about which the turn is being made. Very few rigid sidecars, however, are made in this manner, as, for one thing, such an arrangement leads to the passenger having to sit considerably behind the driver. The general rule is to find the sidecar axle some six or eight inches in front of the back wheel axle, and, as a consequence, the steering is no longer truly correct. The difference, however, is comparatively slight, although by no means negligible. By advancing the sidecar axle the passenger occupies a better position from the conversational point of view, but the advantage so gained is probably more than outweighed by the additional wear of the tyres. Unfortunately, this additional wear takes place

Fig. 2.—Basket with shackles and bent diagonal bar.

trouble being that when, as not infrequently happens, the motor bicycle is changed and the sidecar retained for use with the new mount, the alignment is to a certain extent thrown out owing to the probable slight differences in the frame construction of the new machine. On the other hand, with the sidecar which

Fig. 5.—A second space for a luggage case.

result the basket and the passenger offer a great deal of head resistance—a factor that does far more in slowing the combination than anything else—and not only are they nearly always too high, but the backs are generally much too straight. What the sidecar passenger

Equipping the Sidecar.

wants, and what the motor cyclist ought to realise as the best arrangement for his machine, is a low reclining position, for not only does this result in the reduction of head resistance as much as possible, but the fact that the centre of gravity of the combination is low results in a machine that can be whisked round corners with perfect safety, and this altogether apart from the comfort of the passenger. It is not at all a difficult matter to alter the angle of the sidecar

Fig 6.—A space for tools in the foot of the sidecar.

seat from the usual sort of "church-pew" effect into something approximating to a hammock. The easiest method is to introduce shackles between the main C springs and the cross bar which supports the seat.

These shackles should be as long as possible provided they do not allow a passenger to bump on the diagonal cross bar. This last member is very frequently placed in such a way as to give the chair very little latitude of up and down motion.

The Diagonal Member

extending from the saddle-pillar of the machine to the sidecar axle has really very little work to do, as its whole function is to keep the motor cycle upright. Hence there is no reason why it should not be considerably bent so as to allow the sidecar basket to be placed in an extremely low position. As a matter of fact the diagonal cross piece is somewhat of a nuisance, but until something new in the design of motor cycle frames comes out we shall have to put up with it. In one or two racy looking sidecars which we have inspected recently, the basket is placed completely in front of this diagonal tube and, consequently, the lowest possible position can be adopted, but with this arrangement it is needless to say that leg room has to be considerably restricted, and it is, therefore, not one which can be recommended for any purpose in which the passenger's comfort figures to an appreciable extent. With regard to the bending of the diagonal tube this can easily be done in a few minutes by any cycle mechanic who has a brazing hearth, but it results unfortunately in a small amount of enamel being burnt off. The ugly spot can, however, easily be touched up with a little hand applied enamel or if a day or two is not of much consequence the tube can be properly stoved. Figs. 1 and 2 show more or less diagrammatically how, by the mere application of shackle links and the bending of the tube, the position of the sidecar basket can be greatly improved in every respect.

Luggage Carrying.

The only possible advantage of a sidecar basket that is perched up in the air is that it clears the sidecar chassis by a sufficient margin to allow enough clearance for the introduction of a suit case or other similar article. This, however, is a poor return for the endurance of discomfort. In shackled sidecars, in which there is insufficient room at this point to allow for a reasonably sized package to be carried, the luggage board, to be of any use at all, should be extended rearwards, so that there is enough ledge space behind the basket to allow for a suit case to be carried tipped up on end, and not lying flat on its side. The method of carrying the case is shown in fig. 3, and is one which has been found very satisfactory. The case is strapped down to the luggage board, as shown, with two long straps; and, by means of two smaller straps, these large ones are secured to the back curve of the Cee springs. The result is that the whole affair rides extremely easily and securely. With very little trouble the luggage board can be made, when not in use, to slide right underneath the seat, and thus when a suit case is not being carried, it is practically out of sight.

To those who make their combination more or less a fixture, we would recommend the use of toolbags fixed to the sidecar chair, instead of in the ordinary way to make part of the motor cycle. The advantage of this method of carrying the tools is that the weight is entirely sprung, and hence they can be packed quite loosely without any fear of their knocking each others' corners off and setting up a rattle. At the same time, far more commodious cases for tools and spare parts can be fitted up in various places on the sidecar than could be carried on the machine itself, and there is the further advantage that they leave the carrier free to support a considerably larger amount of luggage when touring. In figs. 4 and 5 are shown ways in which certain spaces can be utilised.

There is nearly always room, even if quite long shackles be used, to fit a flat case between the bottom of the sidecar seat and the luggage board, the case being placed so as not to foul the bent diagonal cross members. On the writer's sidecar this case measures 15in. long, 3in. deep, and 5in. wide, and is thus amply large enough to carry a spare tube, a pound tin of carbide, and a

spare quart of oil, to say nothing of various other small odds and ends.

Under the basket seat, and in front of the diagonal stay, there is a second space that can be made use of, as shown in fig. 5. In this position the best form of case that can be used is one that has a long drawer in it, the body of the affair being bolted—using large metal washers—to the seat. This case measures 4in. deep, 1ft. long, and 7in. broad, and holds the complete tool-kit and a tremendous quantity of spare parts, etc. It is necessary to use some sort of drawer in this case, as otherwise the contents of the box are not easy to get at. The above cases are made out of brown fibre, such as is used for cheap suit cases. It is quite light, very stiff, and waterproof. Nearly all saddlers stock the material, and no difficulty ought to be met with in getting a case of any size and shape made up.

In our opinion by far the best form of sidecar is that with the torpedo-shaped footpiece, as it is not only graceful in outline, but gives a most desirable amount of leg room for the passenger. At the same time, the scuttle-shaped front presents another space, which can be used to advantage without affecting the comfort of the passenger. Fig 6 shows an arrangement which the writer has fitted up in his own sidecar, and which proves extremely useful for the bestowal of various odds and ends, especially such things as may be required for use during a non-stop journey. The position of the pocket allows the passenger to get anything that is wanted without the necessity of stop-

EQUIPPED FOR A TOUR.

Showing the luggage carrying capacity of a motor bicycle and sidecar, including carrier, valise, suit case on sidecar platform, and spare tyre. The sidecar is a special Montgomery with high-backed chair.

Equipping the Sidecar.—

ping the machine. Since the pocket inclines downwards, there is no necessity for any lid. Like the other cases, this affair is also made of brown fibre, and just fits snugly into the upper groove of the torpedo forefoot.

In fig. 7 is shown still a further waste space, which can be utilised without detracting in any way from the passenger's comfort. For this purpose all that is required is a sheet of fibre or fabric-covered millboard placed athwart the chair, so as to make a vertical pocket about 5in. wide behind the passenger's legs. The writer has no personal experience of this last type of arrangement, but saw it on Mr. Frasseti's Indian sidecar, where it was used for the accommodation of overalls, various tools, Thermos flask, etc.

Fig. 7.—A vertical pocket for overalls, etc.

After making a number of experiments, the writer has hit upon a lighting installation, which has proved as nearly as possible ideal. On the near side of the sidecar is a Solar head lamp, and a second one of the same kind is carried on the usual place on the steering-head. Both these are served by a "Tricar size" Allen Liversidge generator, which is clipped to the vertical tube which supports the sidecar chassis from the motor bicycle down

THE NEW END-TO-END SIDECAR RECORD.

The start from John-o'-Groat's at 2.55 a.m. on Monday, July 24th.

tube. The sidecar lamp is focussed so as to spread a broad beam of more or less diffused light practically all over the road, whilst the head lamp is arranged to give a long, penetrating beam. The tube used throughout is flexible metallic, which is bound at intervals to the frame, along which it is conducted, with insulating tape. A short length of rubber tube leads from the generator to one end of a Y-piece, made of brass tubing, from the other ends of which proceed tubes to the sidecar lamp and head lamp respectively. The A.L. generator supplies two full-sized burners easily, and the fact that by merely turning a tap the supply of gas generated automatically regulates itself to anything between maximum light and no light at all is very convenient. From the writer's observation, it appears as though only a few of the motor cyclists who run side-

cars think it necessary to put a lamp on the near side of the latter. This is, however, a very important point, and should not be neglected, as drivers of oncoming vehicles frequently fail to realise that the motor cycle has any attachment to it, and do their best to force what they believe to be a solo machine either into the hedge or the gutter. Apart from the fact that the sidecar lamp is valuable as an illumination, showing up particularly clearly the left side of the road, it is well worth its cost as a safeguard against damage.

THE NEW END-TO-END SIDECAR RECORD.

HUGH GIBSON'S attempt to improve upon his own figures of 40h. 47m. for the journey from John-o'-Groat's to Land's End with a motor bicycle and sidecar proved successful, the time being reduced by exactly two hours. His original record was created on June 6th and 7th last year, Gibson on that occasion using a standard single-gear Triumph, 85 by 88 mm., with Mills-Fulford sidecar. Although several attempts have been made to improve upon the figures none have proved successful until this one. The new record was accomplished on an 89x89 mm. Bradbury with N.S.U. two-speed gear. In both records Gibson was accompanied by Geo. Wray in the sidecar.

Postcards duly signed by Hugh Gibson and witnessed by local checkers were posted to *The Motor Cycle* at the following towns en route, giving the times of departure:

	Mon. July 24.
Left John-o'-Groat's ...	2.55 a.m.
„ Beaulieu (134m.) ...	8.10 a.m.
„ Perth (266½m.) ...	1.50 p.m.
	Tuesday, July 25.
„ Wigan (520m.) ...	12.40 a.m.
„ Gloucester (654m.) ...	6.57 a.m.
„ Okehampton (787½m.) ...	1.27 p.m.
„ Penzance (876m.) ...	5.19 p.m.
Arrived Land's End (886m.) ...	5.42 p.m.
Dunlop tyres, Lyso belt, Bosch ignition, Lucas lamps, and Shell spirit were used.	

Arrival of Hugh Gibson and George Wray at Land's End 38 hours 47 minutes later, beating previous record by exactly two hours. The machine is a two-speed Bradbury.

A Run on a Two-speed Enfield.

THROUGH the courtesy of the Enfield Cycle Co., Ltd., we recently had an opportunity of a week-end ride on one of the 2 $\frac{3}{4}$ h.p. chain-driven two-speed Enfield lightweights, and are pleased to give our readers the benefit of our experiences with it. We also append three illustrations of the details of this most interesting machine.

A part sectional view of the engine.

To commence with, it is particularly easy to control, owing to its efficient type of change speed gear and free engine. A handle is provided for starting, but we found it just as easy to put the lever in the low gear position, lift the valve, and push the machine along at a walking pace, when the twin-cylinder engine immediately fired and the machine could be mounted without the slightest exertion in the form of running to start.

The rear carrier stand and extended wings to the mudguard. Observe the method of securing the toolbag.

Once under way, the change speed lever is pushed over into the high gear position, pressure being kept on it until the high gear is well home. All semblance of jerkiness is removed on account of the friction clutch on engine-shaft, and while running at ordinary speeds the transmission is as smooth as if the machine were fitted with a belt. At very low speeds some slight difference may be detected, but it is so easy to change on to the low gear that no one would employ the high gear for slow running in traffic. The special form of magneto transmission fitted to the Enfield machine enables the spark to be retarded and advanced within its fullest range, whilst retaining the maximum heat of the spark. This is an advantage which can only be appreciated when controlling the machine in traffic or getting the last ounce out of it on a steep hill.

Some Useful Fitments.

Among the refinements fitted to the Enfield chain-driven mount may be mentioned a petrol gauge marked in quarter gallons, an oil gauge with red-coloured background, which shows the level of the oil much better than the ordinary type. As no pedalling gear is required on this machine, double footrests are fitted, so that the rider can change his

Arrangement of twin engine, change speed gear, magneto, and carburetter on the 2 $\frac{1}{4}$ h.p. Enfield.

position from time to time—a desirable feature when undertaking long rides.

During the time the machine was in our possession we did not have the slightest trouble with it, and we were considerably surprised at the speed that could be attained with an engine of comparatively small dimensions. As regards its hill-climbing qualities, these are well known, the combination of the chain drive and two speeds permitting any hill to be climbed which is met with in the ordinary course of touring.

Our trial, although not a lengthy one, was sufficient to cause us to part with the machine with considerable pangs of regret.

FURTHER SPEED TRIALS ON THE CLIPSTONE TRACK

The second series of open speed trials will be held by the Nottingham and District M.C.C. at Clipstone on August 19th, when there will be five open events. A special gold medal is offered for the fastest flying mile over this course irrespective of class of machine.

MANCHESTER RIDERS OF SINGLE-CYLINDER TWO-STROKE MACHINES.

A reader recently asked for experiences with the two-stroke Levis motor cycle, which has led F. Mahler, of Manchester, to send us the above photograph of four Levis riders in his district.

TWO HOURS' SINGLE-CYLINDER RECORD BEATEN.

ON Tuesday last week, Lieutenant R. N. Stewart, Queen's Own Cameron Highlanders, and Mr. F. A. McNab started at 4.16 p.m. from the railway straight at Brooklands in an attempt on the hour and two hours' records.

Stewart was going well and averaging well over 60 m.p.h., riding very close in to the edge of the track, but on the fourth lap he had to stop through the air lever becoming jammed. McNab was going at a slower pace, and was covering the laps at 2m. 50s. Almost at the end of his hour, Stewart, averaging about 59 m.p.h., stopped through the oil leaking into the petrol tank. McNab stopped about the same period to change his belt, which had become rather oily. The stop, however, was of brief duration, and the second hour saw McNab the holder of the two hours' record, having covered in that period 110 miles 297 yards. The 100 miles time is also record—1h. 49m. 8 $\frac{1}{5}$ s. The previous best two hours' ride

was by G. Lee Evans on an Indian, 82.5 x 93 mm., 499 c.c., on November 13th, 1909, in which he covered 108 miles 1,367 yards. McNab's mount was a Trump, fitted with the new J.A.P. engine, 90 x 77.5 mm. The machine was shod with Continental tyres, Dunlop belt, and Hellesen dry battery. He used Vacuum oil of a new brand known as "8.H.," specially made for racing machines. At the end of the hour, McNab's laps were as low as 3m., but he increased the pace to 2m. 55s. towards the end of the two hours; he would have made better time had it not been for a stretched valve. At the end of the fifth lap, McNab complained of being obstructed at different times in his attempt by carts leaving the aeroplane shed without warning, and by both pedal and motor cyclists.

At seven o'clock, Lieutenant Stewart, after fitting McNab's tank to his machine, made a further attempt on the hour record. He started at a speed of about fifty-seven, which he increased to sixty, but too late to lower the existing figures.

Scene during F. A. McNab's two-hour record ride on a 3 $\frac{1}{2}$ h.p. single-cylinder Trump-Jap.

F. A. McNab finishes his two-hour ride.

ROUND THE WORLD ON MOTOR CYCLES.

TWO interesting and interested persons were at the start of the last Quarterly Trials, on the 22nd ult., in William Streiff and James Esler, both Americans, at present engaged touring round the world on motor cycles. The former, it will be remembered, rode a 3 $\frac{1}{2}$ h.p. N.S.U. from San Francisco to New York, 3,836 miles, in twenty-eight days and three hours, under most inclement weather conditions.

Streiff is at present riding a 3 $\frac{1}{2}$ h.p. N.S.U. fitted with Peter Union tyres, Shamrock-Gloria belt, Bosch magneto, and is using Wakefield oil and Shell spirit. James Esler, his companion, is riding one of the now famous Indian machines.

Both these riders started from London on Thursday, July 20th, and intend to touch Newcastle, Edinburgh, Glasgow, crossing over to Ireland, then back to London, afterwards on to the Continent, touching France, Belgium, Holland, North Germany, Switzerland, Italy, thence *via* Russia back to America—an approximate distance of 5,000 miles.

Mr. Streiff thinks the roads in England are fine, but does not approve of police traps, and would like to be without the sharp turns in the roads.

Wm. Streiff and James Esler, both Americans, standing beside the former's globe-girdling N.S.U.

QUESTIONS & REPLIES

A selection of questions of general-interest received from readers and our replies thereto. All queries should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately for ease of reference. Letters containing legal queries should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Silencer Explosions.

Q My machine is a 1909 $3\frac{1}{2}$ h.p. magneto. Sometimes on switching off the current a loud explosion takes place in the silencer.

The same thing happens when switching on again. When the current is off and the throttle closed smaller reports are heard in the silencer. Can you explain the reason of this? The throttle lever does not close off the gas entirely.—J.N.M.

The explosion in question is caused by an unfired charge being pumped by the cylinder into the silencer, and, in the first case, fired by the hot silencer, in the other by the flash of the charge fired immediately afterwards, when the current is switched on again. Its volume is entirely limited by the extent of the throttle opening.

Overheating of Crank Chamber.

Q For the last week or two I have had the crank case of my $3\frac{1}{2}$ Fafnir overheat badly. I can quite understand it getting a little warm, but now it gets too hot for the hand by a long way, and retains its heat long after the cylinder is cold. The compression is quite good, and everything else is apparently in good order.—C.J.P.

We should advise you to remove the cylinder and to examine carefully the joint of each piston ring. In the event of one of these being broken, or in the event of the rings themselves leaking through their bearings surface, the crank chamber would get hot in exactly the manner described, and it would eventually upset all the bearings and the cylinder.

Incorrect Magneto Timing.

Q I have great difficulty in getting my $3\frac{1}{2}$ h.p. four-cylinder F.N. 1907 model machine to start. It begins to fire in one or two cylinders after I have travelled about 200 yards downhill. The machine runs well when warmed, but when spark occurs 6 mm. before top of stroke, it has no power on hills. This timing is correct. However, when machine is warm, it will start much easier, so it would seem as if carburetter is at fault. The points of the sparking plugs are set at .5 mm. I have throttle two-thirds open, and extra air shut.—H.G.

We think that if you were to time the spark so that with the lever almost retarded it occurred on the dead centre, you would get better all-round results. Any machine would start a good deal easier

when it is warm, but it is conceivable that an additional device for shutting off some of the main air running past the jet might be of service in this direction. .5 mm. is probably a trifle large, and we should advise you to experiment with a slightly decreased gap. The adjustment of the inlet valves is all-important.

No Power.

Q I have a single-cylinder machine with a.o.v., accumulator ignition, and Longuemare carburetter. It is rather hard to start, and when started goes for about one mile on the level without any extra air, gradually slowing down and finally stopping. If I give a little extra air the machine, instead of increasing speed, stops altogether. It is also accompanied by sudden cracks, but no misfires, and engine becomes rather hot. Compression is very good, the spark is perfect, and the valves are all right. What is the matter?—R.S.W.

We should advise you to remove the jet and examine it for any slight stoppages which may occur in one of the numerous slots of the Longuemare carburetter. At the same time, care must be taken to

CLIMBING ARTHUR STREET,
EDINBURGH, WITH ITS
NOTORIOUS GRADIENT

THE
DOUGLAS AND RUDGE
SCOTTISH
TRIALS TEAMS.

notice that the throttle is actually fastened to the lever which operates it, and that it opens and closes with the hand lever. A modern piston-controlled carburetter would be an improvement.

Knocking at Intervals.

?

On a recent Sunday I came from Streatham to Dover in two and three-quarter hours. The last mile or two of the journey I could hardly proceed at all because, although I retarded the spark, it would knock badly. This, I concluded, was due to overheating. But now comes the peculiar part: I stayed at Dover four hours, and, of course, the engine got quite cold, but when I left there the knocking began again and continued till I got to Sandwich, where I had to stop for the toll man to let me through the gate (waited about ten minutes, as he was in bed). Then when I left Sandwich to my very great surprise there was no knocking, and there has been none since—why was this? I am an experienced rider and gave the machine plenty of air all the time.—H.N.

The only thing we should be inclined to put the knocking down to would be a detached point belonging to the sparking plug, pre-supposing that you were using one with a multitude of points, which had become incandescent, and was firing the charge in advance of the electric ignition. It is just possible that this lodges in some places where it would be exhausted with the mixture, and consequently the knocking ceases. We should imagine this was considerably more probable than the carbon deposit theory, and, of course, it can be easily verified by a glance at the plug. In the event of it not being the plug point, it would not be a bad plan carefully to examine the cylinder casting and see that

there is no minute projection in any part of the valve pocket or the top of the cylinder which might, under certain circumstances, become incandescent for some time, as this has been known to cause similar trouble in other machines.

Missing at Speed.

?

I should be very much obliged if you would kindly advise me as to my trouble. When on the road doing about 30-35 m.p.h. my machine runs splendidly, but on opening out it puts on another 3 or 4 m.p.h., and then starts missing badly, as much as four and five explosion strokes at a time. On coming to a hill it slows down a bit, but the firing is as good as ever, and it climbs well. This fault is not in the plug, as it is the same with a new one. The valves, I know, do not stick.—M.W.L.

We are of the opinion that your trouble is due either to a very weak exhaust valve spring, which allows the valve to float when the engine is turning round fast, and working in a normal manner when the speed falls. There is also a possibility that the petrol pipe is slightly too small in bore to allow a sufficiency of petrol on full throttle. From your remarks we should gather that you could do with a slightly larger jet. You do not mention ignition; probably the contact points are in need of attention.

READER'S REPLIES.

Regular Running at Slow Speed.

May I suggest that "A.A.U." tries a small extra air hole in the front cylinder inlet pipe of his Douglas, as it appears the momentum of the air causes the back cylinder to get more air than the front. This is, of course, presuming that valves and ignition are O.K. Wishing *The Motor Cycle*, from which I have gleaned much information, every success.—R. E. GOLDEN.

Referring to the difficulty experienced by your correspondent "A.A.U." re misfiring of the back cylinder of his Douglas, the symptoms point to the back cylinder getting a weaker mixture than the front one. The reason is probably an air leak in the induction system, either due to the rear end of induction pipe being not screwed tightly down to the cylinder, or to the so-called "compression" tap over the inlet valve being partly open or leaky. If "A.A.U." will search for leaks on these lines, I think he will be able to secure even firing at anything down to five m.p.h., assuming that, as he says, the spark and valves are all right.—S. J. TAYLOR.

"A.A.U." should first make quite sure that his valve spring tensions are equal, as described on page 49 of the "Douglas Motor Book." Then, when the machine is running, act as follows: (1.) Retard the magneto lever a little. (2.) Fully close the extra air short lever. (3.) Bring back the long throttle lever as long as firing continues regular. (4.) Put the foot on the brake. Under this treatment the Douglas will travel as slowly as four to five miles an hour on top gear, or three to four miles an hour on low gear, provided the inlet springs are of equal tension and the carburetter has not been tampered with. I have just given the Douglas E model a thousand miles of Dartmoor testing, and I have nothing but praise to offer. The engine responds to the slightest touch of the lever, and travels anything from three to thirty-five miles an hour, taking every hill under right treatment. My five years' experience with the heavyweight pales before the pleasure given by the little Douglas.—CO 475.

LIKE A FLASH! AN IMPRESSION OF JAKE DE ROJIER AT SPEED.

THE SCOTTISH SIX DAYS' TRIALS.

OUR last issue dealt with the incidents of the first day's run from Edinburgh to Aberfeldy—173 miles approximately—which included the ascent of Rest and be Thankful—but we repeat the list of competitors who lost marks on that day so that the trial may be more easily followed.

Class 1.—Marks lost: Hay, 60; Gerard, 60.

Class 2.—Marks lost: R Downie, 18; Mouat, 8; Donaldson, 60; Alexander, 49; Pratt, 33; Bostock, 60; Scott, 60; Pennington, 60; Silver, 17; Fontaine, 60; MacGregor, 60.

Second Day.—106 Miles, including Cairn-o'-Mount.

The first excitement on Tuesday morning consisted in the belated arrival of Allan Hay, Donaldson, and Gerard, who turned up just before breakfast. They were delayed at Arrochar until dark on Monday, and crossed the perilous mountain road by night. The three men had but one lamp between them, and that was carried by Hay, who had no brakes. Hay's trouble was punctures. Donaldson's cylinder was noticed to be lifting at Arrochar, as his crank case had cracked across, but he merely complained that he was losing a lot of oil. However, he finally had to go back to the smithy at Tarbet, where the Scotch Vulcan improvised two large iron clamps. Gerard's magneto proved his *bête noire*. The trio had many adventures in the darkness. We had asked Hay at Edinburgh why he entered a 2 h.p. this year, since in 1909 and 1910 his 3½ h.p. had failed on all the hills. "Man," he retorted, "if she'll no climb, I can carry her, but I canna carry a 3½ h.p." True to his word he carried his Aleyon over the Rest, with some help from Donaldson. At 7 a.m. the three reached the Crianlarich Hotel in such a pitiable condition that they were refused admission. However, the compassionate proprietor provided them with breakfast in the street.

We had hoped for a fine day after yesterday's downpour, but the proverb which says "Always wear oilies in Scotland" was justified, for the heavy rain which had been falling most of the night soon recommenced. The judges added fifteen minutes to the standard half-hour for adjustments before starting, and several men found the extra time very welcome. Davies had broken his carrier at Kenmore on Monday, and it had cut his new Kempshall almost in half. He took out his rear wheel, fitted a new tyre, and repaired his carrier in the forty-five minutes. Others were equally busy, but everybody excepting poor Fletcher, whose timing gear stripped, was ready to start at 10 a.m.

The day's run was short, but undoubtedly severe, the roads varying from dry to greasy and from greasy to flooded during the 106 miles. We began by following the southern bank of the Tay into Dunkeld: the slimy surface and sharp corners were the only trouble here. The roads are so heavily cambered that it is unsafe to take a right-handed corner wide, and the unusual spectacle of expert riders cutting sharp right-hand corners fine along the inside camber was frequently visible. Several men took heavy tosses. Leaving Dunkeld a wicked V corner introduced us to a steep twisty hill with a treacherous surface; it witnessed many failures. The road improved towards Blairgowrie, and for a few miles the surface became dry and hard before Kirriemuir. This is a villainous little town entered by a short stiff hill, at the

top of which you twist sharp right and sharp left down narrow alleys. One well-known rider thought to treat the assembled crowd to a thrill, and tackling the hill at 40 m.p.h. hit a grid projecting 6in. from the roadway, over which his machine leapt a foot into the air, concluding with an S swerve, and a frightful crouching under the very eyes of the Chief Constable.

Torrents of Rain.

Leaving Kirriemuir for Edzell the rain recommenced, and this time the downpour was of the "clear-the-streets-in-ten-seconds" variety. The roads were soon awash, and belt-slipping was the order of the day. Poor Ware had a succession of six punctures in the driving wheel of his Chater-Lea sidecar. After lunch at Edzell engines were carefully nursed for the dreaded ascent of Cairn-o'-Mount, eight miles away. This hill is a far more genuine pimple than Rest and be Thankful. Although, like all Scotch passes, it conducts you to the summit in "steps," it is credited with an average gradient of 1 in 9 for two miles. When the entire countryside rises with the road, a stretch that looks like a level "landing" is probably 1 in 10 or 1 in 12. Anyhow it troubled the competitors exceedingly. The first mile's climb commences with a very bad knuckle, at which a proper rush is unobtainable; this brought the variably geared brigade off top speed with a vengeance. Then the grade undulates between 1 in 15 to 1 in 6 for a mile, until two hundred yards below the one level resting place a dreadful prospect saluted us. The road on a patch of 1 in 12 was covered with soft sand, mud, and broken bricks to a depth of eight inches for two hundred yards. A semi-practicable cycle track had been left at each side, but the rain had soaked this narrow avenue (not a foot wide) into the semblance of a ploughed field. We did not see one rider surmount this patch, but a labourer told us several men had backjumped

The start from Aberfeldy on Tuesday morning last week, on which day Cairn o'-Mount was ascended—in more ways than one!

The Scottish Six Days' Trials.

along the outer side, skirting the steep drop into the valley; most of us tried the right-hand side, and got stuck in a deep mud hole half-way along. After this nightmare a very little climbing brought us to a level patch, above which there is nearly a mile of heavy climbing, culminating in a double Devil's Elbow on a single figure gradient. Hereabouts many of the early failures got re-started. The impression is that not half a dozen men made clean ascents from bottom to top, but owing to the length of the ascent it was impossible to observe the riders' performances properly, and the subjoined notes of individual performances were jotted down at the Devil's Elbow just below the summit.

Observations on Cairn-o'-Mount.**CLASS 1.**

1. Allan Hay (2 Alcyon), not observed.
2. John Morrison (two-speed Douglas), failed below first bend, remounted, rounded second bend, kicking with his feet.
3. J. S. Holroyd (Motosacoche), rounded both bends finely with pedal-assistance.
4. F. Smith (5 Clyno and sidecar), excellent performance.
6. H. V. Colver (two-speed Enfield), failed first bend, remounted, took second bend well.
7. P. Phillips (two-speed Douglas) rounded both bends well, kicking with his feet.
8. E. B. Ware (8 Chater-Lea and sidecar), excellent performance.
9. W. B. Gibb (two-speed Douglas), got up kicking hard with both feet.

CLIMBING CAIRN-O'-MOUNT.

17. G. T. Gray (3½ Rudge with N.S.U. two speed gear), very fine climb indeed.
18. A. Hill (3½ Rudge with N.S.U. two-speed gear), almost stopped first bend, conked out at second bend.
19. Smith (8 Bat), very fine climb.
20. R. Downie (3½ Brown), excellent.
21. F. Downie (3½ Ariel), had a good wind, ran alongside for 100 yards.
22. Mouat (3½ Rudge with N.S.U. two-speed gear), fast, pedalled to relieve slipping belt; one could smell the charred leather.
23. Donaldson (4½ Norton), the star performance of the day; his huge single-cylinder engine (82×120 mm. Norton) came up very fast and quite smoothly.
24. Alexander (3½ two-speed Humber), stopped lower down, got up with kicking.
25. H. G. Dixon (3½ three-speed New Hudson), came up well with the aid of kicking and pedalling.
26. W. Westwood (3½ T.T. Triumph), excellent.
27. Geo. Bell (3½ three-speed New Hudson), pedalled at second bend.
28. Pratt (3½ two-speed Humber), pushed round first bend, remounted, and got up kicking.
29. Bostock (3½ three-speed New Hudson), failed first bend, remounted, good round second bend.
30. Scott (3½ B.S.A.), not observed.
31. W. H. Elce (3½ Rudge with R.-W. gear), excellent.
32. C. S. Burney (3½ Rudge with R.-W. gear), excellent.
34. Pennington (3½ T.T. Triumph), good, but kicked a little.

(2) J. Morrison (8 h.p. Bat-Jap).

(4) Frank Smith (5-6 Clyno and sidecar).

(1) S. Fontaine (Quadrant).

(3) L. Pennington (T.T. Triumph).

(5) E. B. Ware (8 h.p. Chater-Lea and sidecar).

10. Gerard (two-speed Enfield), broke his chain below first bend.

CLASS 2.

11. Thomson (8 Bat), excellent.
12. B. H. Davies (3½ Rudge with N.S.U. two-speed gear), seized low gear halfway up hill, pushed remainder.
14. C. MacGregor (5 Bat), sooted plug several times on hill, took bends well.
15. Dr. Dibb (5 two-speed Rex), failed first bend, remounted, took second bend well.
16. Reay Morrison (5 Bat), fast, ran alongside on second bend.

35. W. Houghton (3½ Rudge), excellent on first bend, was unluckily baulked by a slower rider at the second bend.

36. T. Silver (3½ Quadrant), failed, but got going again, had a trying time.

37. Fontaine (3½ Quadrant), similar performance to Silver's. The following have lost marks on Tuesday's run:

CLASS 1. E. B. Ware 28 and Gerard 30.

CLASS 2. Smith 36, R. Downie 34, Mouat 26, Donaldson 60, Alexander 60, and Silver 20.

The following have lost no marks at all up to date:

CLASS 1. J. Morrison, J. S. Holroyd, F. Smith, H. V. Colver, P. Phillips, and W. B. Gibb.

Scottish Six Days' Trials.—

CLASS 2. Thomson, B. H. Davies, Dr. Dibb, R. Morrison, G. Gray, A. Hill, F. Downie, Dixon, Westwood, Bell, W. Elce, C. S. Burney, and W. Houghton.

Allan Hay is the only starter not yet arrived.

Whatever happened amid the privacy of the foothills, most of the riders reached the summit a long way behind time, and judging from their language on the score of rubber belts and wet weather, I could make a shrewd guess at the commonest cause of failure. Nor was the next section adopted for picking up lost time. For sixteen miles the road was undulating, rough and twisty. It was composed of a soft red sandy material, in a state of liquefaction, scarred by deep ruts, and the tracks showed that the machines had been jumping about in the most vivacious fashion, while deep slashes in the soft mud at every corner proved that spills had been frequent. However, the rain had ceased, and fifteen miles from Aberdeen we ran on to a hard, dry, broad, and straightaway highway. Here—for the first time in the trial—we had a chance to make up time, and "Teeteeing" was freely indulged in. I regret to say that more than one machine came near covering these fifteen

Inverness on a score of occasions, and has always found it either raining, or leaving off raining, or just beginning to rain. To-day it was dry whether in honour of the Trials or of the Show deponent knoweth not.

Allan Hay got in late last evening, having driven his Alcyon up Cairn-o'-Mount with a couple of rests to cool Gordon Fletcher turned up smiling at 5.30 this morning, and has recommenced to run officially. He took his Douglas to Perth by train, had a new timing pinion made, rode back to Aberfeldy, and started at 8 p.m. on Tuesday to cover the route on which we had started at 10 a.m. His impressions of the Cairn—ridden in darkness—were iroid. It remains to be seen what view the judges will take of the fact that his machine did not cover a few miles of Monday's route under its own power; but as he is permitted to check in, he will presumably be awarded a bronze medal if he finishes.

Third Day's Run Easy by Comparison.

As to-day's run was childishly easy, incidents were few and far between. Elce lost his way, and had a heavy fall while scrapping to regain lost time, cutting his hand so severely that a doctor's services had to requisitioned. The

C. S. Burney (Rudge) at the first bend of Cairn-o'-Mount, which long ascent unseated a great many competitors

miles in fifteen minutes. I even saw three riders with their heads down doing a good forty-five miles per hour along the tramlines into the Aberdeen control. The secret history of many a gold medal for "reliability" would be interesting reading, and a little "T.T." experience comes in handy when one has pushed up a two miles hill.

Wednesday's Run, Aberdeen to Dingwall, 140 miles approximately.

To-day's run was a perfect picnic after the trying roads and weather of Monday and Tuesday. We had only 143 miles to cover, and except for a few light showers the weather was fine. The roads were broad, hard, and practically level, though in many places they were atrociously bumpy, owing to the heavy traction engine traffic between the distilleries and the railway; wherever trees overhung the road, there were real possibilities of a bad skid. Leaving Aberdeen at 9 a.m., we cut across in a N.W. direction to touch the sea coast at Banff, and then hugged the coast-line *via* Elgin and Inverness into Dingwall. The scenery was very tame as far as Forres, which was disappointing in view of the fact that we were unable to take our eyes off the road on Monday and Tuesday. After Forres there was plenty to look at. The route was very scantily marked with arrows, and many of us went astray on several occasions.

Inverness Actually Fine.

The traffic in Inverness was very heavy, owing to the Highland Show. The writer has previously visited

Just over the steepest portion of the climb.

machines I saw most of during the day's run were the Big Bats, the Ridges, the Douglasses, and Colver's Enfield. The gigantic Bats reel off the miles at high speeds, with their engines barely ticking round on 3 to 1 gears, but Thomson had his front wheel bearing out at Inverness. Fast as the Bats are, the tiny Douglasses keep level with them, in spite of only being geared 6 to 1 on top. These rapid little engines can touch 40 m.p.h. on this gear. Colver's Enfield is always spluttering away in the van, its exhaust having the true Junior T.T. crackle. Houghton's Rudge is another very fast machine, being a single-gear T.T. model

The Scottish Six Days' Trials.—

The team of Rudge riders in the Scotch Trials.

with dropped bars and cellar door filler holes. This rider is usually half an hour ahead of time at the controls, and has shaken many of his fittings to pieces by hard driving, but considering that he has only a single gear, he is putting up a very fine performance, especially on the hills.

A Series of Serious Troubles.

Several riders have had serious trouble along the road. Gerard has thrice broken the driving chain of his Enfield, and when last seen he was coaxing a lady cyclist to let him remove sundry small bolts and washers from her machine to mend his chain with. Bostock is not in yet, having suffered a host of minor troubles with his Humber. His engine developed a squeak, which he ascribed to a broken piston ring. In removing the cylinder he twisted the compression tap in half, and wasted a long time in obtaining a bolt to fill the hole. One of the cars accompanying the trials broke its petrol pipe, and after a long ride on a borrowed bicycle the driver unearthed a blacksmith, who said he could mend it. After an hour's work the repaired place bulged like a graft on a fruit tree, and on being removed from the vice promptly fell in half. The exasperated owner asked the smith if he had ever used a soldering iron before. The smith scratched his head, and admitted that "he mended a bucket fifteen years ago!"

McGregor's Misfortunes.

Campbell McGregor has now forfeited all his marks, and is riding along comfortably, with no hope beyond the finisher's award. He broke a big end bearing of his Bat a week before the trials, and at the end of last week had to train up to London and back for spare parts. He just got his engine reassembled in time to start, but it was in very poor form, and he was gradually tuning it up throughout Monday's run. As a consequence, he had many stoppages on the hills, and when he tried to run alongside on the stone-strewn grades he fell over, being a small light man. He had six tumbles from this cause on a single hill—the very awkward climb beyond Dalmally. These falls bent his front forks, and when he scrapped into Aberdeen last night his front wheel lay over at 75° with the machine vertical. Kind friends told him to drop his Bat on its other side a few times to straighten it, but he took the front wheel out this morning and cranked the forks true with a huge crowbar. His ill luck continued, for his adjustment pulley went wrong to-day. He procured a new flange from somewhere, but it did not fit, and the delay in getting the thread combed out cost him another 60 marks. So he took matters easily, and went to a concert in Inverness.

How Cairn-o'-Mount Troubled some of the Competitors.

A. D. Scott (single-geared B.S.A.), who was missing last night, is rumoured to have withdrawn, after nearly killing himself in trying to push up the last mile of Cairn-o'-Mount. Davies and Silver looked very exhausted last night for the same reason. Davies had scrapped the Rudge handle-bar

wire control of his N.S.U. gear in favour of the German tank lever type, and hopes to have no further trouble with the gear. He has had a trying time, as he pushed up the last mile of the Cairn on Tuesday, owing to gear troubles, and on Monday his carrier broke and gashed his Kempshall cover through to the canvas all round. However, by hard riding he avoided loss of marks on both occasions. The slower riders report having encountered heavy rainstorms to-day, which the earlier starters and faster men escaped.

Wednesday's Marks Lost.

The following have lost marks to-day [it should be noted (a) that nobody can lose more than sixty marks in one day, however late he arrives; (b) that gold medals are awarded only to those who lose no marks at all; (c) silver medals to all losing less than seventy-five marks; (d) bronze medals to all who finish after losing seventy-five marks or more]. List of marks lost: Hay 60, Gerard 60, McGregor 60, and Bostock 60.

The difference made by easy roads, devoid of hills, and by good weather, is thus amply demonstrated; nobody lost a single mark except these four men, who experienced serious mechanical troubles.

FAMILY SIDECARS.

(1) W. Edgar, of Hull, and his 3 h.p. Bradbury with N.S.U. gear and sidecar.

(2) Rowland Hill, of Southport. His machine is a 5 h.p. Norton with Montgomery sidecar, which usually carries four persons.

The Scottish Six Days' Trial.—

Fourth Day.

The Scottish Trials lived up to their reputation to-day in every respect except weather. The scenery was absolutely superb, according to those who travelled in the back seat of the official car. All the motor cyclists had to keep their eyes glued to the road, and could see little else. Fortunately,

The Lat Team—which included S. J. Thompson, C. McGregor, R. Morrison, and R. S. Smith—at the finish of the Scottish Trials.

the sun shone brilliantly for most of the day. Had the entire route been wet, few would have escaped loss of marks. After leaving Dingwall, we proceeded by a magnificently broad and smooth road into Strathpeffer, four miles away; the road then narrowed and became loose and cornersome as far as Garve.

Eighty Miles—A Nightmare.

A little way beyond Garve we turned down a narrow, grass-grown, rock-strewn cart track, and the going was simply villainous for about eighty miles. The narrow track wormed in and out between lochs and mountains, dropping and rising at Nature's behest. Most of it was bordered by a deep ditch on one side and a giddy precipice on the other. The six-foot "fairway" between was freely scarred with deep ruts and potholes, twisted into the craziest hairpin bends, zig-zagging across countless humpbacked skewbridges, etc. One rider said he had never imagined such a road in a nightmare, even after partaking of dressed crab and porkpie at midnight. The surface was indescribably bad. The road's central hump was generally piled with loose 2in. granite lumps, protected on either side by deep ruts of soft red loam, outside which large potholes, full of water or rubble, warned you to keep away from the ditch or precipice. No wonder that spills were frequent, and serious smashes not altogether unknown. The men never knew what was in store round the next corner. To quote three surprise packets: near Poolewe a wicked corner ended in twenty yards of loose broken granite a foot deep; at the apex of Gruinard Bay a sand-drift a foot deep guarded the approach to a skewbridge; and past Gairloch Hill a bad hill that needed rushing had a patch of deep quagmire clean across it halfway up. Each of these claimed its victims. Understand me, the going was not so bad but that a crack rider on a good machine could average a speed in excess of legal limit; but at all points a mistake was literally perilous, and the tracks of the wheels showed that skids, wobbles, and spills had been innumerable. As regards hill-climbing, the difficulty of Little Gruinard has been much exaggerated. The skewbridge at the foot is so far from compelling a standing start that many of us got round at 30 m.p.h. The gradient is not excessive, and the hill is short, while the surface is quite fair (for Scotland, *bien entendu*), though stony round the bend at the top. Poolewe Hill was actually the more trying ascent of the two to-day, for the wind was roaring straight down it at 40 m.p.h., while Gruinard was sheltered until we rounded the bend, where the wind hit us flop! The three-mile climb beyond Kinlochewe was also a severe test in the teeth of the gale. Most of the riders seemed to find the first twenty-five miles past Gairloch Hotel more trying than anything else, as the grease in the pine forests was exceptionally treacherous.

Some of the Victims and their Fate.

It was fine when we started, but dour black clouds, patched with a ghostly white light, hung round the mountain tops, and seemed to threaten rain. In Strathpeffer we saw the evergreen Alan May worsted by a quite trivial gradient. A little further on Gibb had the worst of an argument with a skewbridge, and has ever since been trying to borrow a footboard. Presently Davies was seen mending a couple of punctures, and various other riders were busy straightening out footrests, etc., after tumbles. The vanguard were half an hour early at the first check, as usual, undaunted by the bad going, and by nipping on to their machines had the best of an enterprising petrol salesman, who wanted to charge each man 2s. 6d. for a about quart of petrol on the ground that he had no measure. We were all filling our tanks brimful wherever we saw a petrol can, as considerable doubt existed whether further supplies would be obtainable for 100 miles or so; these regions are considered quite populous if there is a shepherd's hut every ten miles, and for leagues together we did not see a soul. Nineteen miles before lunch came the aforementioned ascent of Little Gruinard, about which a well-known sidecar owner had created a perfect scare. In reality it is a fairly simple climb, and most of the men made light of it, the far worse surfaces previously encountered having prepared us for its scanty sprinkling of small stones. As it was an "officially observed" hill, I append individual notes:

Notes on Little Gruinard Hill.

CLASS I.

Excellent.—J. Morrison, F. Smith, G. L. Fletcher, P. Phillips, E. B. Ware, W. B. Gibb, and J. Gerard.

J. S. Holroyd.—Clean ascent, but not without pedal assistance.

Colver ran alongside up part of the straight, but remounted before the corner.

CLASS II.

Excellent.—Thomson, Davies, McGregor, Dibb, R. Morrison, Gray, Hill, Monat, Dixon, Westwood, Bell, Elce, Burney, and Pennington.

R. S. Smith came up fast, cut out at the corner, and stuck immediately above it.

R. Downie pedalled all the way, and stuck just round the corner. His brother pedalled up the entire distance, but had sufficient breath to remark "Fine view" to the judges, as he plugged round.

M. Pratt was slow but sure.

Houghton came up very fast, lifted his valve at the corner, and conked out when the gale struck him through the gap above.

Silver and Fontaine both came up very fast; both skidded on the loose stones at the corner, and came off.

Hay, Donaldson, Alexander, and Bostock had not arrived when the judges' car left the hill.

S. Fontaine and T. Silver, who rode $3\frac{1}{2}$ Quadrant machines in the Scottish Trials which came to an end last Saturday.

The Scottish Six Days' Trial.—

Fifth Day.

Scottish Six Days' Trial. A. F. Downie (3½ h.p. Ariel) on Amulree.

One individual was indeed heard to remark, "If this is Little Gruinard what must Big Gruinard be like?" but as his engine was out of tune, his surmise may be ignored.

Lunch at the Gairloch Hotel on the shore of a magnificent loch, open to the sea, came as a pleasant relief, and most of the men were creditably inside maximum time, the "scare" having led us to expect much worse than we got. We were charged 1s. 10½d. a gallon for Ross petrol, which is only 1s. in less outlandish places; the faces of the sidecar and car men were a study, as they needed several cans apiece. After lunch we had twenty-five miles of dreadful going, after which the road became tolerably good, and as the district was uninhabited, high speeds again became the order of the day.

Reverting to individual incidents, Graham Dixon has been the most unlucky. A red car forced him off the road among the mountains, and his back wheel was buckled. He rode on to within four miles of Dingwall, where a 6in. arc of the rim cracked clean off. Ware's sidecar played the Good Samaritan, and brought in both Dixon and his machine in addition to its usual load. Fontaine came over very heavily through taking a stony hair-pin near Auchnasheen at high speed; he is badly cut about. Davies mended two punctures and took out his back wheel to fit his third cover since Monday, all without once being late. Donaldson is reported to have smashed up his Norton near the foot of Little Gruinard, and was last seen carrying his machine into a solitary house there quite early this morning. Some anxiety is felt about Bostock, who is reported to have charged a cottage at Poolewe, while no news is obtainable of Alan Hay, but we never expect him till next morning when the day's route is severe. Houghton (3½ h.p. T.T. Rudge) has been disqualified for a breach of the rules at the Dingwall control, after finishing to-night.

The following have lost marks: R. S. Smith, 59; A. U. R. Downie, 60; G. A. Alexander, 60; Silver, 2; and Fontaine, 59. Hay, Donaldson, and Bostock will all be penalised 60 marks, if they arrive at all. Elce's pluck deserves special mention. He cut the guide of his left thumb in a smash yesterday, started in defiance of the doctor to-day, and rode all day practically one-handed.

To-day has again proved a regular nightmare. The arrangements were particularly bad, as the men were set to do one hundred miles before lunch, and in addition there was a delay of two and a half hours at Fort Augustus, for the purpose of the optional hill-climb up Glendoe. When the men reached Fort Augustus, no officials were present, and the timing telephone had not been laid down. Moreover, the road from Dingwall to Fort Augustus was poorly marked with arrows, and several riders went up to twenty miles out of their way, while those who adhered to the official route had considerable difficulty in keeping inside maximum time, owing to the indescribably treacherous surfaces, especially up Glen Urquhart. The first riders were free to leave Fort Augustus at 12.30 p.m., and they then had to cover a further sixty miles before lunch at Newtonmore, on the Grampians. A few patches of this road provided excellent going, but the greater part of the distance was soft, rutty, and slimy to a degree. Spills were frequent, and everybody had an exhausting time. The fastest men did not get in to lunch until 3.30 p.m., and had tasted no food since 6.45 a.m. breakfast. Hence complaints at the official arrangements were loud and numerous.

To revert to Thursday's run, Alan Hay got in at 1 a.m., having lost most of his time in ministering to Bostock, who smashed up his Humber through a bad wobble at high speed on a treacherous part of the road. Donaldson was not injured, as reported last night, but blew his cylinder off once more, and spent many hours at the Gruinard smithy. He and Hay had a thrilling ride over the perilous roads, with but one lamp to illumine their path in the gloom and rain. Houghton appealed against his disqualification, and has been allowed to continue the run, pending the official decision. Graham Dixon built a new rim on to his damaged wheel last night, and started this morning, but it presently collapsed again, and he has now finally retired. His partner, George Bell, on the other New Hudson, has had similar trouble with his front wheel to-day, and has also retired. E. B. Ware and B. H. Davies have had endless tyre troubles. Davies has used up three covers and four inner tubes in the five days, and, owing to his inflator connection breaking to-day, had to race into Newtonmore control with his back tyre practically flat. He presented a weird sight as he tore round the flooded road bordering Loch Loggan, rolling fearsomely all over the road, and sending out a whirl of spume from his front wheel like the bow wave of a motor boat. Several men have executed smart changes of covers on the road, Alan Hill getting his Rudge back wheel out and in again within eleven

The start on Friday for the Glendoe Hill-climb, a supplementary competition for which entrance was optional and the awards made separately.

E. B. Ware (8 Chater-Lea and sidecar) in Glendoe.

minutes. Houghton broke an exhaust valve, and Mouat a valve guide. Elce had to change a cover, and lost a lot of time through the collapse of a front wheel cone. Frank Smith and his sister are having an anxious time with their Clyno sidecar. They have not lost a single mark, and their machine has performed magnificently; but on Tuesday morning the outside crankshaft bearing fell off, and the engine driving sprocket has been kept in place for three days by the key only.

The day's ride falls into two sections—one hundred miles before lunch, and fifty-six miles after lunch. The former was perhaps the most exacting of the entire trial, owing to the greasy surfaces. Rain was falling when we left Dingwall, but the going was fast as far as Beaulieu. From Beaulieu to within ten miles of Newtonmore (one hundred miles away) a bad skid was always possible. A Bat rider drove in front of me for thirty miles with his feet trailing the whole way. Scarcely a hundred yards of the road was straight, the surface consisted of grease, deep soft ruts, and pools of water, while most of the corners were "blind." Quite half the men missed the turn for the bridge at Invermoriston, and travelled some distance towards Cluny. At Fort Augustus we were compelled by the foolish regulations to spend two and a half hours at the foot of a lonely hill, with no shelter from the rain, and no food, drink, or petrol available, after which we had to negotiate sixty miles of atrocious road before lunch at 3.30 p.m. Fortunately, we ran into sunshine near Newtonmore, and the run to Aberfeldy afterwards was quite a picnic. We coasted down off the Grampians along a road which is now broad and hard and smooth for most of the distance, having been absolutely transformed by an energetic surveyor since 1903, when I first pumped over the old road in vast discomfort. The sun shone brilliantly all the way home, and the Pass of Killiecrankie has never looked half so lovely.

The officials are keeping the times and formula results of the Glendoe hill-climb secret for the present, as they are to be combined with those of the Annulree climb to-morrow. The climb is quite distinct from the trials, being optional, with a separate entry fee. The climb consisted of 1,000 yards, averaging 1 in 7.54. The surface was a trifle stony, with one or two ruts; the wind was up the hill, and a short flying start downhill was given, though its benefit was cancelled by the grease on the bridge at the foot. Individual impressions follow:

CLASS II.

J. F. Morrison (Douglas).—Very fair; did not change gear all far up.

G. L. Fletcher (Douglas).—Excellent: apparently the fastest lightweight.

H. V. Colver (Enfield).—Only one cylinder firing on his first attempt; he conked out, but afterwards went up well.

P. Phillips (Douglas).—Excellent.

W. B. Gibb (Douglas).—Took the gradient easily.

E. B. Ware.—The powerful Chater-Lea sidecar devoured the gradient greedily.

S. J. K. Thomson (8 h.p. Bat).—Positively terrific ascent. Easily the fastest of the day. The spectators held their breath when the giant twin got in a rut for at least one hundred yards, and wobbled as if it must come over.

C. McGregor (5 h.p. Bat).—Steady but sure. Lost several seconds by taking the ditch well up the hill. The rider steered out again most adroitly.

R. Morrison (5 h.p. Bat).—Slow, and swayed a good deal.

G. Gray (3½ h.p. Rudge).—Went up easily.

B. A. Hill (3½ h.p. Rudge).—Bad start, but picked up grandly.

R. S. Smith (8 h.p. Bat).—Slow considering his power; cut out at all the bends, which are not difficult.

A. F. Downie (3½ h.p. Ariel).—Went up creditably.

J. Donaldson (5 h.p. Norton).—Good ascent.

W. Westwood (3½ h.p. Triumph).—Magnificent climb. Almost as fast as Thomson's 8 h.p. Bat. Easily the fastest single. Immensely creditable, considering the gruelling the machine has had in the trials.

W. Elce and C. S. Burney (3½ h.p. Ridges).—Good ascents. Burney's engine was noticeably misfiring.

W. Houghton (3½ h.p. Rudge).—Quite fast.

The following have lost marks to-day: Hay (still missing), 60; Mouat, 17; Alexander (not yet in), 60; Dixon and Bell have both retired; Elce, 60; Silver, 4; and Fontaine, 14. Special credit attaches to Fontaine, who was so cut about yesterday that he can hardly stand; to Elce, whose injured hand proved a great handicap in repairs to his tyre and front wheel bearing; and to Fletcher, who had a bad crack on the head, owing to the scales tripod collapsing while he was being weighed in at Glendoe.

Sixth and Last Day.

The last day of a trial is always the most anxious, and we all started in a half-concealed anxiety lest some serious trouble should crop up and nullify our week's hard work. The half-hour before the start from Aberfeldy was exceptionally busy. The back tyre of Frank Smith's Clyno outfit had split yesterday for 5in. along the bead, and he did well to fit a new cover within thirty minutes. Mouat replaced his broken valve guide, and Davies had a rare wrestle with his back cover. Overnight he had noticed the tube showing through a stone cut close to the valve, and it took three men to get the bead into the clinch. The weather was fine, and the first section consisted of the seventeen miles to the foot of Annulree Hill, up which an optional hill-climb was held, terminating below the first bad corner, so that riders to whom the hill was new should suffer no disadvantage. The officials conducted this climb with commendable promptitude, a strong contrast to the Glendoe muddle. The machines were weighed by Norman McMillan

A helping hand near Blair Athol.

The Scottish Six Days' Trial.—

Leaving Aberfeldy on Saturday. Alan Hay (2 h.p. Alcyon), G. Piggot (6 h.p. Zenith-Gradua), and one of the Douglas riders.

in the farmyard at the hill foot, and the trials were *en route* again in an hour. Judged by eye alone, the performances were as follows:

CLASS I.

Morrison (Douglas) misfired and stopped low down.

Fletcher (Douglas) good.

Colver (Enfield) excellent, took the skewbridge at the bottom better than anybody else.

Gibb (Douglas) good.

E. B. Ware (Chater-Lea sidecar) roared up. Hearing that no sidecar had ever made a clean ascent of Amulree, Ware continued past the timekeeper, and tackled the infamous S bend, but stopped above the first corner, as he had wrenched his handle-bar round in its socket. On returning to below the first bend he galloped up to the top in grand style.

CLASS II.

Thomson (8 Bat), a terrific ascent; the machine leapt clean off the ground on the skewbridge.

McGregor (5 Bat) distinctly fast.

R. Morrison (5 Bat) fast and workmanlike.

G. T. Gray and B. A. Hill went up well on their Ridges, but lost time through tackling the skewbridge very cautiously. They picked up well afterwards.

R. S. Smith (8 Bat) seemed nervous of the hill, and cut out his engine frequently; nevertheless made a fast climb.

F. Downie (3½ Ariel) went up fast in clouds of smoke.

J. Donaldson (5 Norton) went up beautifully; the big Norton single cylinder has a beautifully smooth hum on bad hills.

W. Westwood (3½ Triumph). His ascent was not to be compared with his Glendoe climb. Possibly he was over-gearred. Fast, but not so brilliant as in the other climb.

C. S. Burney (3½ Rudge) went up well considering his engine was missing one explosion in ten.

W. Houghton (3½ Rudge), apparently the fastest machine of this make.

About 11 a.m. we all got the word to continue on our way towards Edinburgh, and within 100 yards Davies was seen with his back wheel out fitting his fourth cover of the week. A flint got wedged in the stone cut sustained yesterday and gashed right through the stout gaiter into the inner tube. Alan Hay was for once well up to time, and his Alcyon roared down into Crieff with the pedals spinning round at 3,000 r.p.m. A little further on Elce was seen gingerly picking his magneto to pieces with his uninjured hand. He lost nearly an hour, most of which he afterwards recovered by fast riding. The ride into lunch at Callander was singularly lovely, the scenery along the wooded banks of Loch Earn and Loch Lubnaig being marvellously beautiful. Dry roads gave us almost our first opportunity to gaze about us, though now and again an atrocious pothole or a wicked hog-backed bridge brought our eyes back to the road with a

jerk. After lunch the ride into the finish through Stirling, Falkirk, and Linlithgow was abominably dull and bumpy, while a blinding drizzle drove in our faces for the last few miles, so that the dreary car terminus at Murrayfield outside Edinburgh seemed a veritable haven of rest. Here Messrs. Tolfree and McNullan overhauled the machines which finished, and at about 5 p.m. we were free to depart in peace. Men, machines, and clothing showed signs of the severe buffeting they had received. The route was undoubtedly easier than that of the 1910 trial, but the veteran competitors are inclined to regard the two trials as equally exacting in view of the fearful weather which has been experienced this year.

The competitors felt specially grateful to the Vacuum Oil Company, who by sending a car round enabled us to replenish our tanks when we were fifty miles from a garage; to the Anglo-American Co. for forwarding supplies of "Pratt's" to the most outlandish places and to the officials, for their uniform courtesy and kindness. Before recording the official results I should like to emphasise Frank Smith's wonderful achievement in driving his 6 h.p. Clyno sidecar outfit round this terrible course without losing a single mark. The feat is a record for the Scottish trials, no sidecar having previously gained even a silver medal, and the Clyno could not have put up such a faultless score if it had experienced trouble, for no passenger machine could hope to average more than twenty miles per hour on this route, and Smith plugged steadily away all the week at about this pace. Some of the credit goes to his passenger, Miss Evelyn Smith, who looked after the times and the route; the pair were greeted with a tremendous ovation at Edinburgh, as was the veteran Alan Hay, who did well to coax a single-gear 2 h.p. machine over such roads, and acted as Good Samaritan to all the injured, and general mirth provider to the men. One of the riders caught a hedgehog last night, and when a competitor went to bed after rather too many "wee drappies" of the native liquor, the hedgehog was put to bed with him, but the "wee drappies" were so potent that the victim did not notice his prickly bedfellow till next morning. Ware on the Chater-Lea sidecar would have equalled Frank Smith's performance but for never-ending tyre troubles. On Saturday alone he took his back wheel out seven times, and must divide with Davies the unenviable distinction of breaking all records for tyre troubles. His engine has run magnificently throughout, and has seldom required first speed, it conquered Glendoe on second gear with ease.

We should like especially to thank the Vacuum Oil Co. for their courtesy in placing a seat on their car at the disposal of our photographer who accompanied the riders throughout the trials. The official table of results and awards will be found on the next page.

Alan Hay arriving at Edinburgh on his 2 h.p. Alcyon.

The Scottish Six Days' Trials.—

Scottish Trials
inspection of
machines
at Murrayfield.

EXETER AND DISTRICT M.C. OPEN HILL-CLIMB.

This hill-climb took place at Newt's Hill, Tiverton, last Saturday, and comprised nine events, for which there were a fairly representative number of competitors. The proceedings were marred somewhat by a severe thunderstorm, but this interlude was not allowed to interfere with the running off of the events. One or two of the competitors had narrow escapes from accidents owing to their inability to see their way in the lightning and rain. Some of the riders were timed incorrectly, but as they pedalled their machines on the hill it is not probable that their performances were of much importance. The club is especially indebted to Messrs. E. Gould, F. Dee, E. J. Hancock, and the Bros. Woodgate, as well as to the police superintendents for their kind assistance. The results on fastest time were as follows, the final results on the A.C.U. formula not yet being made known.

Event 1 (lightweights).—W. W. Douglas (2½ Douglas).
Event 2 (touring singles up to 500 c.c., and multi-cylinders up to 750 c.c.)—L. W. Broadbear (3½ Premier).
Event 3 (club lightweights).—H. P. Overmass (2½ Douglas).
Event 4 (touring singles with fixed gear).—C. Roper (3½ Ivy-Precision).
Event 5 (racing motor cycles up to 1,000 c.c.)—1, A. L. Ommaney (3½ Rudge); 2, A. M. Myott (5 Indian).
Event 6 (club singles).—F. T. Wilson (3½ Rudge).
Event 7 (racing singles).—1, C. Roper (3½ Ivy-Precision); 2, S. J. Saunders (3½ Rudge).
Event 8 (club multi-cylinders).—Cancelled.
Event 9 (club racing, any machines).—1, A. C. Hardy (3½ Norton); 2, R. Holloway (3½ Premier).
A. C. Hardy also wins the medal presented by Messrs. Nye and Co. for the fastest club time of the day.

ENTRIES FOR THE A.C.U. SIX DAYS' RELIABILITY TRIALS.

Rider and Machine.	Cyls.	
*W. Cooper (3½ Bradbury), 1		O. Godfrey (7 Indian, sc.), 2
*E. B. Ware (8 Chater-Lea and sc.), 2		*G. Whitworth (2½ Enfield), 2
*A. Robbins (3½ Humber), 1		W. Heaton (2½ A.J.S.), 1
*E. Colliver (3½ Zenith), 1		A. Stevens (2½ A.J.S.), 1
*C. C. Cooke (3½ Triumph), 1		*E. Merratt (3½ P. and M.), 1
*W. Wilberforce (3½ N.L.G.), 1		J. Crickmore (3½ Premier), 1
*B. H. Davies (3½ Rudge), 1		F. Edward (3½ Premier), 1
W. Douglas (2½ Douglas), 2		*G. Piggott (6 Zenith), 2
W. Douglas (2½ Douglas), 2		*S. Sawyer (3½ Premier), 1
R. O. Wells (3½ Bradbury), 1		F. Philipp (3½ Scott), 2
J. Tassell (8 Matchless and sc.), 2		L. S. Parker (3½ Scott), 2
A. R. Abbott (8 Matchless and sc.), 2		*J. Baker (3½ Scott), 2
H. H. Bowen (4 Bat)		F. Smith (5-6 Clyno—sc.), 2
H. Colver (2½ Enfield), 2		*C. P. Finn (2½ Enfield), 2
H. Greaves (2½ Enfield), 2		T. Pollack (3½ James), 1
R. W. Duke (3½ Zenith), 1		A. D. Arter (3½ James), 1
P. Weatherill (3½ Zenith), 1		C. S. Burney (3½ Rudge), 1
J. Haslam (6 Zenith), 2		B. A. Hill (3½ Rudge), 1
P. Shaw (3½ P. and M.), 1		*H. M. Jameson (3½ Zenith), 1
W. Pratt (3½ P. and M.), 1		*G. Ruscoe (2½ Forward), 2
*P. Moffat (2½ Douglas), 2		W. T. Munroe (3½ Rover), 1
*J. Baker (3½ Triumph), 1		C. T. Newsome (3½ Rover), 1
*C. Williams (3½ Triumph), 1		*P. Gront (2½ Douglas), 2
*F. Dover (3½ Premier), 1		F. Banks (3½ Invincible), 1
H. Morgan (8 Morgan), 2		P. Castagnoli (3½ L.M.C.), 1
		N. Woollen (3½ L.M.C.), 1
		J. Slaughter (3½ L.M.C.), 1
		J. I. Day (3½ Bradbury), 1
		H. Dixon (3½ New Hudson), 1

Rider and Machine.	Cyls.	
T. C. Atkinson (3½ New Hudson), 1		S. T. Tessier (5 Bat), 2
*G. Wray (3½ Bradbury), 1		J. Babbington (5 Bat), 2
*H. Gibson (3½ Bradbury), 1		W. H. Eggington (6 Zenith-Gradua), 2
*H. E. Ashby (3½ L.M.C.), 1		*F. G. Boddington (4½ Precision), 1
*W. Houghton (3½ Bradbury), 1		*H. Hughes (6 N.S.U. & sc.), 2
T. Silver (3½ Quadrant), 1		*D. O'Donovan (3½ Singer), 1
*V. Busby (3½ Precision), 1		*A. Uffelman (3½ Humber), 1
Humber, Ltd., have entered three machines.		
*Denotes private owner.		

IRISH HILL CLIMB.

The results of the Dublin and District M.C.C. trial and hill-climb held on the 22nd ult. are as under:

	Reliability.	Hills.	Total.
F. J. Walker (3½ h.p. Rudge)	100	83	180
J. Healy (3½ h.p. Rudge)	100	80	180
R. H. Taaffe (3½ h.p. Triumph)	99	80	179
T. J. Dumphy (3½ h.p. P. and M.)	99	80	179
P. Brien (3½ h.p. Rudge)	98	80	178
T. Green (4 h.p. Waverley)	97	80	177
R. Walshe (3½ h.p. Triumph)	95	80	175
N. E. Drury (7 h.p. Indian)	91	80	171
J. H. Taylor (3½ h.p. Rudge)	97	70	167
R. Dumphy (3½ h.p. Triumph)	97	70	167
W. S. Cornborough (3½ h.p. Triumph)	97	70	167
F. Keagh (3½ h.p. Triumph)	94	70	164

EQUIPPING THE SIDECAR.
BRADFORD M.C.C. OPEN HILL-CLIMB.
Police Traps.

On the Chatham-Canterbury Road, approximately between the first and third mile posts out of Canterbury. It is, as usual, grossly unfair, being on a perfectly safe stretch and the timing is done by cheap watches.

The Walsall police have again been busy trapping motorists.

Stolen Machines.

On Tuesday (25th ult.), two men called at 5, Routh Road, Wandsworth Common, S.W., the house of Mr. E. L. Ford, handed in a bogus card, desiring to buy a motor bicycle. After trying it on the stand, one of the would-be buyers tried the machine on the road, the second writing out a cheque for the required amount, which after they had left was proved to be a forgery. In this way they managed to relieve Mr. Ford of his motor cycle, the particulars of which are: New 1911 Royal Enfield; two-speed free engine, painted naval grey; nickel-plated carburetter with extra air inlet pipe; Dunlops; No. LA 2751; frame No. 1192; engine No. 16424.

Two More Attempts at Six Days' Records

At present there are two attempts being made by motor cyclists to capture the six days' record—one by J. Guzzwell, of Grimsby, who is riding a free engine Triumph, and the other by A. W. Brittain, of Buxton and Cambridge, on a Rudge. It will be remembered that last week we mentioned that Mr. Brittain had retired at Leicester, but a footnote added to his card showed his intention of making another attempt in a week or so, which he has done, having recommenced last Saturday at midnight. Since then we have received cards posted from various places *en route*, showing the total distance covered up till seven o'clock on Monday night as 1,000 miles, which is an average of five hundred miles per day. A telegram from Britain on Tuesday reads: "Speedometer 3,863, feeling fit, machine given trouble." He therefore retired with 1,205 miles to his credit. Mr. Guzzwell started at 12.15 a.m. on Saturday, July 29th, just twenty-four hours before Brittain. The total distance covered by him on Saturday, Sunday, and up till 6 p.m. on Monday, when he checked at our Coventry office, was 1,252 miles. On leaving, he remarked that he intended riding another 250 miles by midnight if possible, thereby bringing his total up to 1,500, or an average of five hundred miles per day for three days. Guzzwell seemed in perfect condition, not looking any the worse for the first half of the strenuous task he is undertaking.

**Hill-climbing at Wagga Wagga, N.S.W.**

A correspondent sends us an account of a privately organised hill-climbing competition at Wagga Wagga, about 300 miles from both Melbourne and Sydney. The hill is two miles in length, but the gradient is not recorded. The result of the contest was a triumph for Triumph riders, the first three J. E. Lucas, R. McIntosh, and S. Ralston, all riding that type of machine, and reaching the winning post in 48s., 49s., and 50s. respectively. There are many motor cyclists in this district who use their mounts for business purposes only, and so far have not taken much interest in the sporting side of the matter. As a result of the climb a meeting is being convened for the purpose of forming a club.

TIME TO LIGHT LAMPS.

August 3rd	8.44 p.m.
" 5th	8.40 p.m.
" 7th	8.36 p.m.
" 9th	8.32 p.m.

A Postponement.

Owing to insufficient entries and the beginning of the holiday season, the M.C.C. petrol consumption trial has been postponed until after the holidays.

Brooklands Bank Holiday Meeting.

The following entries have been secured for the Fifth Short Motor Cycle Race at the August Bank Holiday meeting on Monday next. The motor cycle race commences at 2.30 p.m. There are several races for cars, and motor cyclists who do not intend to leave town for the Bank Holiday will find plenty to interest them at Brooklands.

B. Pattison (1-cyl. Brown).
F. E. Wasling (2 Enfield).
Paul Smidt (2 N.S.U.)
H. Shanks, jun. (1 Kingfisher).
E. T. Bolton (2 Indian).
G. Griffith (1 Zenith).
H. S. Gaskell (1 Triumph).
C. R. Collier (2 Matchless).
H. A. Collier (2 Matchless).
A. J. Sproston (1 Rudge).
J. R. Haswell (1 Triumph).
A. J. Luce (2 Bat).
T. G. Meeten (1 Rudge).
Stanhope Spencer (1 Rudge).
Hugh Mason (2 Matchless).
S. G. Fenton (1 Zenith).

Scene at the start of the Bradford M.C.C. Open Hill-climb. (See page 809.)

Last Saturday's Short Distance Handicap at Brooklands.

In addition to *The Motor Cycle* cup awarded to H. Hunter (5 h.p. J.A.P.) in the A.C.U. Short Distance Handicap at Brooklands last Saturday, the following prizes have been won: The second rider, H. Martin (2½ h.p. Martin), receives a silver salver; the third, M. Campbell (3½ h.p. Triumph), a silver salver; and the fourth, S. T. Tessier (4 h.p. Bat), a handle-bar watch.

The Sidecar End-to-end Record.

H. Gibson and his passenger, G. Wray, will in all probability be disqualified by the Auto Cycle Union for exceeding the legal limit of speed in their recent successful attempt on the End-to-end sidecar record. If this disqualification takes place, both riders will, of course, be unable to take part in the Six Days' Trials, for which both have entered.

The Scottish Six Days' Trials.

The judges in this event have awarded the special prizes as follow: Ross Prize—C. S. Burney (3½ h.p. Rudge, N.S.U. two-speed). Lightweight Prize—W. B. Gibb (2½ h.p. Douglas, two-speed). The Trade Team Prize has been awarded to the Rudge team, composed of C. S. Burney, B. A. Hill, and W. H. Elce. Elce and Burney rode six-speed Rudges, and Hill a Rudge with N.S.U. gear.

A.C.U. Six Days' Trials.

As we go to press we learn that the following entries have been received for the Six Days' Trials in addition to the list given on page 804:

J. S. Holroyd (2 Motosacoche)
H. P. Maurice (3½ Premier)
G. T. Gray (3½ Rudge)
S. Crawley (3½ Triumph)
W. F. Newsome (3½ Triumph)
W. Creyton (3½ Triumph)
W. A. Jacobs (3½ Rex, water-cooled)
S. Fontaine (3½ Quadrant)
A. Clark (2½ Dene-Precision)
F. W. Applebee (3½ N.S.U.)
A. R. Abbott (3½ Bradbury)

The Motor Cycle will present gold medals, as in previous years, for the best performance by a private owner in the bicycle and passenger classes. The awards will be made in accordance with the judges' decision.

FUTURE EVENTS

Aug. 5-7—Motor Cycling Club Standard, Reliability, Hill-climbing, and Brake-testing Trial.
" 7—B.A.R.C. Bank Holiday Meeting.
" 7-8—Dublin and District M.C.C. Open Two Days' Reliability Trial to Glengarriff and Killarney.
" 14-19—A.C.U. ANNUAL SIX DAYS' RELIABILITY TRIAL. HARROGATE AS A CENTRE.
" 26—Mersey M.C. Open Hill-climb.
Sept. 2.—Coventry and Warwickshire M.C. Annual Open Hill-climb.

A Catholic Bishop appeals for a Motor Cycle.

As evidence of the very practical use to which a motor cycle may be put by the clergy, it is interesting to note the letter of the Rt. Rev. Dr. Chisholm, Bishop of Aberdeen, in the Catholic papers, pointing out that his diocese is the largest and the poorest in the kingdom, and that many families in glens and distant places, ten, fifteen, and even thirty miles from church, are compelled to live out of touch with their spiritual advisers. These difficulties could be overcome and greater opportunities afforded to children for instruction if a priest could have the use of a motor cycle. An earnest appeal is made by the Bishop to Catholics in his diocese to enable him to provide a machine for the use of a travelling priest.

Lady Competitors at New Brighton.

In the motor cycle events which were included in the programme on Saturday last at New Brighton, Mrs. E. Baxter and her sister-in-law, Miss Baxter, took part in a mile pursuit race, both mounted on 3½ h.p. Rexes, Mrs. Baxter winning by about 100 yards. Subsequently in a mile scratch race, Mr. E. S. Baxter, riding his wife's machine, was easily beaten by L. Mogridge (5 h.p. twin Vindec). In an attempt on his own three miles record of 3m. 24s., Mr. Baxter failed on a 7 h.p. twin Rex, but succeeded in beating his previous five miles record by 24½s.

Non-stop Run in Yorks.

The second of the series of 100 miles non-stop runs under the auspices of the Hull and East Riding A.C. took place on Saturday last, the route taken being via Haworth Arms, Beverley, Lund, Tibthorpe, Wetwang, Fimber, Wharrah, North Grimstone, Norton (Malton), Rillington, Sherburn, Ganton, Hunmanby Hill, Dotterill, Bridlington, Driffield, Hull.

The following riders made non-stop runs and thus qualified for medals:

C. Edgar (3½ h.p. Bradbury), J. W. Noble (3½ h.p. B.S.A.), B. Hodgson (2½ h.p. Torpedo), J. Fletcher Walton (3½ h.p. Rudge), C. Mehew (3½ h.p. Rudge), A. H. Walker (5 h.p. Rex and sidecar), E. A. Downs (3½ h.p. P. and M.), A. G. Hearfield (3½ h.p. Rex), and E. L. Brown (3½ h.p. B.S.A.)

THE LIGHTWEIGHT SIX HOURS' TRACK RECORD.

C. Stanley Franklin who, riding a 2½ h.p. Hazel-Jap, set up a new six-hours record for light-weights, covering 203 miles 222 yards in that time. (See page 780 last week.)

On the left are Mrs. Baxter and her sister-in-law, Miss Baxter, with their 3½ h.p. Rexes on the track at New Brighton, while in the right-hand picture Mr. Baxter is preparing to mount his wife's machine to race with L. Mogridge on a 5 h.p. twin Vindec.

North-west London M.C.C. Tour to Lyons.

THE afternoon of July 29th and the early hours of the 30th saw sundry members of the N.W.L.M.C.C. converging on Folkestone, the first stage of their journey to Lyons, cherishing designs on the "Circuit du Rhone," and intent on cementing the Entente Cordiale. My run to Folkestone with my 8 h.p. Chater-Jap and sidecar calls for little description as it was devoid of any incident

The North-west London M.C.C. tour. Riders with their machines on the quay at Boulogne last Saturday waiting to pass the customs.

of note, nor does the journey over to Boulogne. Some time elapsed before we could get clear of Boulogne as the whole of an immense quantity of baggage was dealt with first; however, once the machines were landed we progressed rapidly and found the passage of the customs by no means the fearsome process we had anticipated. Needless to say we are

A LONG DISTANCE COAST RIDE.

Harry Long (Triumph), who recently completed a long distance coast ride, being accompanied by A. P. Maurice, a Premier rider. The photograph shows the two passing through Paignton.

all provided with the R.A.C. international pass, without which no motor cyclist should tour abroad, unless he is looking for trouble.

Cheered by a vociferous *bon voyage* of the inhabitants we left Boulogne, keeping carefully to the right, and following Route Nationale No. 1. Our curiosity regarding *paré* did not for long remain unsatisfied, for we struck frequent patches almost at once. It is terrible stuff, and careful driving is absolutely essential. Halting at Pont de Briques, a few miles outside Boulogne, where we had been directed to an English speaking restaurant, we were at home in two minutes, my passenger and I enjoying glorious omelettes. A heavy thunderstorm delayed us somewhat, but we were soon bowling along again through excellent country hall-marked with the prosperity of a landed peasantry. Hereabouts Ashworth's sidecar tyre went flat, a hasty examination disclosing both sides of the tube torn by a flat-headed nail of the kind largely used in the boots of villagers.

This trouble dealt with we made good progress except for frequent *paré* to Montreuil, where we struck a dreadful sample with a steep winding hill into the town. Soon afterwards we came upon several of our men in trouble. Hal Hill being the worst off with a punctured float and no hope of a soldering iron until the morning. Several of the party thereupon decided to stay in the small village of St. Martin, where they filled the only inn. Ashworth and I proceeded over vile roads with Baxter on a Triumph to Abbeville, where we put up comfortably at the Hotel de la Tête de Bœuf. The rest of the party came in next morning, and we are now off in glorious weather to Rouen, and as far beyond as circumstances will allow. More anon. W.

STANDARDISATION OF MOTOR CYCLE RIMS.

It is gratifying to announce that the sub-committee appointed by the Cycle and Motor Cycle Manufacturers' and Traders' Union, Ltd., have issued their report, and that the opinions frequently ventilated in these columns have at last borne fruit. This committee have confined their investigations to standardisation of dimensions of rims (not design), whereby the interchangeability of all motor cycle tyres may be secured.

Standard rims for beaded edge tyres.

The circumference and diameter of each rim are measured on the extreme top of the beads.

26in. x 2in. and 26in. x 2 1/4in.
Cir., 71 1/8 inches.
Dia., 22 1/2 inches.

26in. x 2 1/2in.
Cir., 66 1/2 inches.
Dia., 21 1/2 inches.

As a result of communications with the following firms of tyre manufacturers—Messrs. Bates, Clipper, Clincher, Continental, Coventry Rubber Co., Dunlop, East London Rubber Co., B. F. Goodrich, Gorton Rubber Co., Kempshall, Macintosh, Palmer, ROM, Avon, Liberty, etc.—the dimensions of rims as delineated in the accompanying illustration have been approved, and it is now recommended (1) that rims of these dimensions should be adopted by the trade, (2) that these rims should be known as the standardised rims, and (3) that manufacturers when ordering either tyres or rims should always specify "standardised sizes."

All tyre and rim manufacturers are being informed that only rims of such sizes and only tyres suitable to such rims will be ordered by the motor cycle manufacturers after September 1st, 1911.

The importance of this recommendation will be fully recognised by all motor cyclists, and should be of equal service to manufacturers.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and should be accompanied by the writer's full name and address.

A Tip for Cleaning Crank Cases.

[5771.]-I do not know if the following way of cleaning a dirty engine is of any use to you. Procure an old bicycle pump, fit a 1/4 in. brass tube in place of connection, fill with petrol, and squirt at the engine with it. I have found this a very quick and satisfactory way of removing oil and filth.

E. DAVIS.

The International Match.

[5772.]-I have not the pleasure of knowing either Mr. Macneill or Mr. E. Barnfather who are good enough sportsmen to offer to put up a sum of £55 between them for another match with Mr. C. R. Collier. I agree with Mr. Macneill that it was unfortunate that both of us had bad luck in the International match; it would have been much better and probably more satisfactory all round if Collier and I had arranged beforehand that, if either one had tyre or other troubles, the race should be re-run, but in view of the fact that Collier did not offer to run the second match race over, I could hardly be blamed for taking the third match and claiming the championship after Collier had his trouble in the third race.

Much as I would like to give the English public an opportunity of seeing another match race, I regret that this will be quite impossible, as I have already booked my passage back and am sailing on the 5th August, but I would like to take this opportunity of suggesting to Mr. Collier, whom I consider one of the finest riders in the world, that he come to America. Just at this season of the year I can myself easily make upwards of £150 a week at racing, and Mr. Collier, after the splendid performance he put up against me, would be a great drawing card at any meet in America (and there are on an average three a week), and could without difficulty nett a still larger sum.

I hope Mr. Collier will carefully consider the advisability of coming over to America, and I am sure that if he does he will have the same splendid reception that has been given me by the English newspapers and the motor cycling fellows I have run across. I hope to have an opportunity of coming to England another year, and if there is another T.T. race I want to have a go at it. I was handicapped this year, as I have not done any road riding for the past seven or eight years, but if I go in another T.T. race I shall do a lot of riding on the road and get prepared months ahead.

JAKE DE ROSIER.

[5773.]-I congratulate your many contributors on their very gentlemanly and sportsmanlike replies to Mr. Wells's letter. If Messrs. Collier and de Rosier are to be matched again I consider the following conditions should be added:

1. Both machines should be either belt or chain driven.
2. Competitors to be started at intervals, as in the T.T. Races.

It would be a question of "all out" then, and no mistake.

A. J. ATKINGS.

Tendency of Design.

[5774.]-I was extremely interested in the article "Tendency of Design," the last paragraph, regarding the future construction of motor cycles, especially appealing to me, as at present single and twin cylinder machines of the following specification are undergoing vigorous road tests: Direct chain drive in conjunction with a shock absorbing device,

both of which are completely enclosed in an oil-tight chain case, two speeds, handle-bar control, spring seat-pillar, automatic carburetter and lubrication. Your correspondent's predictions are truly remarkable, as the above practically fulfils them. Although neither machine will be complete in many details, one will be entered in the A.C.U. six days' trial, and such a severe test should lend valuable data to the construction of 1912 models which may shortly be placed on the market.

F.B.

Change-speed Gears and Sidecars.

[5775.]-*Appropos* the recent controversy *re* the above, I thought I might let you know my experience which so far has been most satisfactory. For the past three years I have driven a 3 1/2 h.p. N.S.U. and sidecar, fitted with the N.S.U. two-speed gear, and have found this gear so satisfactory that upon changing my machine for a 6 h.p. model I fitted the same gear. This gear has now taken me about 15,000 miles without the slightest adjustment (except, of

course, new pulleys), and I find it will take practically all gradients without any sign of slipping.

With regard to tyres, I have so far experienced no trouble in this direction. I use the Dunlop special, and find they give every satisfaction. In my opinion I consider the life of a tyre is governed by the way one drives, especially on high-powered machines.

ERNEST G. NOPTON.

[5776.]-I was very interested in Mr. A. Barker's remarks *re* his N.S.U. two-speed gear in the issue of July 13th. I am riding a 1911 N.S.U. also with a two-speed, but I cannot get the low gear to hold. The makers have only allowed threequarters of a turn of the gear handle for this gear, and if I don't hold the handle all the time I am on low gear it works round to the free engine. This is the only fault I have with the machine at all. Perhaps one of your readers can explain this curious fact. My machine pulls twenty per

cent. better with the cut-out closed. I have tested this fact with the speedometer and by testing it with another motor. The cut-out does not let out the exhaust gases against the wind, but sideways, also before the gases enter the silencer. I have asked several people to explain this, but they have been unable to do so. I might say that I have ridden motor cycles for ten years, and I have never heard of another case like this.

H. G. PARKES.

Regulations for the 1912 Tourist Trophy Races.

[5777].—Your opinions on motor cycles contests are so generally acceptable from the sporting point of view that the last few lines of your editorial in *The Motor Cycle* of July 27th come as a great surprise. You say that "the suggestion to limit the speed and develop the contest into a high speed reliability trial is distinctly a good one." From whose point of view? Certainly not from that of the amateur rider.

I do not think I am far wrong in attributing the great support accorded to the T.T. by this class of competitor entirely to the fact that the race offers the only satisfying outlet in the year to those who look for a road contest where the result depends entirely upon speed, and is completely devoid of the irksome plethora of checks, controls, and formulae which already infest a quite sufficient number of the year's trials (in every sense).

Once this fungus is permitted to overgrow it the T.T. will be damned entirely from the sporting point of view; it will interest neither the racing amateur, the trade (who already have the Six Days and Quarterly Trials), nor the islanders, upon whose enthusiasm we depend for the very existence of the event.

We have been unfortunate in the matter of serious accidents this year, it is true; but if it is not considered that their effect will be to act as an ample warning to "first-timers," then surely there are other means at hand to secure the same end without making a farce of the whole thing. Fatal or serious accidents occur in the hunting field, yet one never hears of the hard rider to hounds being placed under a speed limit, still less of the abolition of this virile sport.

H. LISTER COOPER

Foreign Machines and British Riders.

[5778].—The seriousness with which most of your correspondents in last week's *Motor Cycle* have treated my letter on this subject would indicate that I have signally failed in my efforts to be humorous. As a matter of fact, as I explained to you personally, this letter was never sent to *The Motor Cycle* with any idea of having it published. No one appreciates more than I do the splendid reception the British public has given the Indian motor cycle since it has been on this market, but when I read Mr. A. C. Davison's letter, and the rather pointed remarks in your editorial in regard to the single-cylinder machines, both of which appeared to me to be somewhat uncalled for, I could not help indulging in a bit of sarcasm. W. H. WELLS.

[Mr. Wells's letter was addressed to *The Motor Cycle*. It was a reply to Mr. Davison's letter published the previous week. It was not marked private, and as it referred to another correspondent's views and to editorial statements it was given publicity in the usual way.—ED.]

[5779].—I should like to make a comment on Mr. W. H. Wells's attack on your article *re* English riders and foreign machines. I considered the article very fair and British, as no doubt would the majority of your readers, and any spleen that was shown was on Mr. Wells's side in his answer.

He infers that anyone using a British machine would be amongst the "also rans"—but had not Collier made the unfortunate mistake about his petrol capacity the Indians would have been very much amongst the "also rans," and also as regards the appearance of the machines at the finish there was absolutely no comparison.

There is really no necessity for a crusade to oust the American stuff; let us remain English, and give the Yankees sufficient rope and they will oust themselves.

JNO. H. CASTLE.

[5780].—There is a strong flavour of the Noble Red Man about the utterances of Mr. W. H. Wells.

He has been "reading between the lines" and, look you, no matter how you obliterate the trail, his keen eye will

detect every trodden blade of grass, and he is upon you with a tomahawk in the twinkling of a wigwam.

His gentle ways remind you of the Redskin, strutting around the council fire of his tribe, flourishing his scalps, bragging of his prowess, and belittling the courage of his adversaries.

What your correspondent lacks is perspective and sportsmanship. There is a pitiful spirit behind his outburst, and apparently he has yet to realise that the trade on this side of the water has not yet reached his primitive throat-cutting level.

Let our friend "Gobbler-of-the-Lightning" take as many prizes as his ability will gain him, and good luck to him, but let him beware of showing a spirit of mean rancour at an English paper's pardonable satisfaction when British products hold their own.

PALE FACE.

[5781].—The letter in your issue of July 20th, under the above heading from Mr. W. H. Wells will come as a surprise to most readers.

The Indian machines and their crack rider Mr. Jake de Rosier have been received in a really loyal manner here, and the reception of recent achievements has been reported in such a generous way in *The Motor Cycle* that the most critical American could not help feeling that a compliment had been paid. (I am not aware whether Mr. Wells is an American by birth.)

Considering that the machine in which Mr. Wells is interested has accomplished what he desired, it is a pity he should now try to create a nasty taste.

I note the usual confident tone, of repeating deeds with the singles, and trust that when this treat comes along "C.R." will once more be out with his "all right" machine. 'Nough said.

S. K. JONES.

[5782].—In common with a great many other motor cyclists, no doubt, I was disgusted with the tone of letter No. 5751, and can only suggest that your correspondent has been reading *The Motor Cycle* with exceedingly jaundiced eyes. Personally, my loyalty does not prevent me from enjoying a run on a foreign machine, but I do not see the object of buying one. Of course, I suppose the fact that Godfrey holds a special agency for the Indian machine had nothing to do with his choice for the T.T. Race, as having plenty of money he could have no object in advertising and selling Indians. Finally, may I remind Mr. Wells that just as the Indian was defeated by tyre trouble last year, so this year the British champion was ousted from first place by tyre trouble.

H. E. RENDALL.

[5783].—In reply to Mr. W. H. Wells [letter 5751] in your issue before last, I as a private owner (and riding a $3\frac{1}{2}$ h.p. Trump-Jap) am prepared to meet anybody he chooses to put up on a single-cylinder machine (500 c.c. class) for any distance over fifty miles at Brooklands as soon as a meeting can be arranged, although I by no means believe the performances of the Indian twins. However, I should like to show that England can still hold her own on the singles.

(Lieut.) R. N. STEWART.

[5784].—While I have interest neither in the commercial aspect of the Tourist Trophy Race, nor the ethics of subsequent advertisement by means of Letters to the Editor, I am moved as an amateur competitor in the race and as a native of a country which extends a more generous hand to the foreign rival than any other "in this large world," to reply from my own point of view to the ill conceived effusion which appeared in your issue of July 20th over the signature of Mr. W. H. Wells.

Rightly or wrongly, we in this country supplement our sporting traditions of scrupulous fair play to the foreigner, by absolutely unhindered admission of his goods into our markets, and by entirely unprejudiced treatment in the press, but I believe I am right in suggesting that Mr. Wells comes from a country where the would-be commercial rival has to climb the harrier of a 40% duty before securing a market under any conditions. Is this a case of Satan re proving (imaginary) sin; or just a little forgetfulness?

Wading further through this same effusion, we gather on Mr. Wells's disinterested authority that to ride anything but

one of his machines was to condemn oneself inevitably to the fate of an "also ran." There seems to have been quite a number anxious to qualify under this category.

The difficulty is, however, to know beforehand whether this simple rule is going to apply; for one seems to recollect that last year a candidate for this distinction could hardly have done better than ride an Indian. True, tyre troubles were held largely responsible for this; but here again there seems to be a fallacy, for the tyres used were of the same nationality as the machine—a mistake one notes which has this year been rectified. And herein lies the truth, which is, not that any one machine is necessarily better than all the others, but that—as I once heard Mr. Wells himself say—the winner is among those few who get through without a stop; and stops, as we all know, are due as often to bad luck and bad judgment as to faults in design.

Lastly, we are told that a long furrow is about to be hoed to our "complete disgust"—that is, of those who with curious perversity prefer to see an English machine win—with the single-cylinder Indian. Though there has so far been singularly little cause for "disgust"—at any rate on the part of its rivals—at the performances of the 4 h.p. Indian. Mr. Wells may rest assured that he has sown more "disgust" in the minds of the general public by his letter than he is ever likely to do by any victory in open competition.

As one who has never been, and never expects to be, within measurable distance of winning such a race as the T.T., I can only say that the victor is entitled to the very greatest credit for the performance of his team, but not to the ridiculous claim that all who do not happen to ride his machines are *ipso facto*, foredoomed to the position of "also ran." A glance at any published account of the race will reveal the absurdity of this. H. LISTER COOPER.

[5785.]-Considering the amount of space you gave to the Indian victory, I thought Mr. Wells's letter a piece of gross discourtesy, and I am extremely glad it did not come from an English firm.

Undoubtedly, Mr. Wells's most amusing remark was that about the British also rans. I heard—but, of course, I may have been misinformed on the subject—that if a well-known British rider had not had to stop for petrol in out of the way places, he would have had a lead of some minutes, but then what are a few minutes to these fast American machines? As to his last remarks on agriculture, no doubt they export some pretty tall plants from America, and we await the Indian single-cylinder record breaker with bated breath. G. L. HUNTING.

[5786.]-I have been much amused by reading the different letters connected with the above heading. As one of the unpatriotic competitors in the T.T. Race, and a rider of an Indian motor cycle, might I presume to take up a little of your space, by commenting upon a few of the letters, and explaining my want of patriotism, so far as motor cycles are concerned.

First of all, it has been remarked to me quite a number of times by different riders of alleged all-British machines, "If the Indian were a British built machine, I would buy one to-morrow," or words to that effect. Well, I must confess that no such scruples trouble me. What I want is the best motor cycle I can get, and when a better one than my present mount comes along, then as an enthusiast for a good motor cycle, and without regard to whether it is British or foreign, I shall get it. In this policy, I am only agreeing with Mr. Hart-Davis when he says, "We only buy foreign articles for use when we find them superior to British made goods" [letter 5761].

Now I come to letter 5763, wherein Mr. Karslake says that Collier's net running time was by far the best. Mr. Karslake must evidently have counted accurately the number of Collier's stops, and the time taken by each stop, before he was in a position to make such an assertion about net running time. I wonder if he was in a position to check this. I might add that the Indian machines were equipped with tanks which held almost enough petrol to complete the race, and each machine had plenty left at the finish.

In letter 5764 Mr. Davison becomes amusingly melodramatic when he talks about the spectacle of a rider "selling his services to the highest bidder." It may be news to Mr. Davison to know that I, an Indian rider, paid all my own expenses, and received no remuneration whatever for my services.

I cannot allow letter 5766 to pass without comment. Mr. Low therein says, "In both T.T. and the recent matches, the Indian machines have been lucky, and thus have been victorious." What poor sport and utter nonsense! And further he says, "If Collier had not had misfortune, the Matchless machines would have again won the T.T., and with plenty to spare." I think it is rather unnecessary to bring in suppositions. In a like sense, I might say that if Indian motor cycles had not had tyre troubles, and Bat motor cycles also had not misfortunes in last year's T.T. Race, the Matchless machines would not have been in the first three.

It seems to me that the matter has developed into a comparison between Matchless and Indian. Well that is quite easy to look into so far as the T.T. is concerned. Five Indians started and five finished, taking the three first places. The two Indian riders who were not placed were "lucky" enough to be spilled, which spoilt their chances of finishing well up. I was one of the lucky ones, being brought down three miles from finish of first lap, my time for which was forty-seven minutes fifty-two seconds. I am sorry that Mr. Karslake was not there to see how much time I lost, otherwise he might have been able to give me my net running time for that lap. I was later on lucky enough to get two punctures, which pleased me greatly.

Then again in the Match Race, we all know the exceeding good luck which came to de Rosier in having his tyre come off. As I have said, five Indians started in the T.T. and five finished. In short, what other make of machine in the race had 100% finish, and first, second, and third places. I think I will stick to my Indian yet awhile, even although unpatriotic. J. R. ALEXANDER.

[Letters on the above subject continue to reach us in large batches, but those published will indicate the general trend of feeling in the matter.—Ed.]

A Long Distance Ride without a Toolbag.

[5787.]-Re your article in July 13th issue under above heading, I should like to say that I bought a P. and M. motor bicycle, 3½ h.p., three or four months ago, and have since travelled over 2,000 miles without having to use any

T. H. Walsgrove with his 3½ h.p. P. & M. and sidecar. (See accompanying letter.)

of the toolbag contents for the bicycle, except once for a sparking plug, punctures not counted (having once to put an ordinary tube in back tyre, having only the sidecar spare with me). Most of the distance has been done with the sidecar and passenger.

I have since had the cylinder head off and cleaned, everything being in excellent condition. I was sorry to read of Mr. W. Pratt's accident in your issue of July 20th, for I feel sure that the distance, under the conditions stated in July 15th, could easily have been accomplished.

Needless to say, I have no interest in Messrs. P. and M., only that of a very satisfied user. T. H. WALSGROVE.

THE INTER-CLUB MEET AT BROOKLANDS.

The scene in the Paddock at Brooklands last Saturday, on the occasion of the R.A.C. Inter-club Meeting and gala day.

THE Royal Automobile and associated clubs held a most successful meeting at Brooklands on Saturday last. It was a glorious day, as hot as ever, and the number of events, the excellent entry list, and splendid organisation and capital sport witnessed were to some extent a compensation for the intense heat. Naturally, some of the events dragged a little, but this can only be expected when there is a large number of entries for one event. Naturally, as the Auto Cycle Union is one of the principal bodies affiliated to the parent organisation, two motor cycle races figured on the programme. These provided excellent sport, and were greatly appreciated by the spectators. Just as the first motor cycle event was ready to start, His Royal Highness Prince Henry of Prussia arrived in the car he has been driving in the Prince Henry Tour. He took the keenest interest in the event, and at his request Lieutenant D. J. McGillewie, R.N., one of the competitors, was presented to him, with whom he engaged in conversation for some minutes.

The event was down in the programme as the Auto Cycle Union Short Distance Handicap; distance, about five and a half miles. (This and the other motor cycle event started from the fork.) For all classes of motor bicycles owned and ridden by members and affiliated members of the A.C.U. First prize, a cup presented by *The Motor Cycle*; second prize, a silver trophy; third prize, a silver trophy; fourth prize, a trophy. The majority got away in good form, but Geoffrey Smith unfortunately broke a belt fastener as soon as his engine began to fire. The order at the end of the first lap was: Campbell, D. C. Bolton, Ebbutt, Spencer, Martin, Hunter, Collier, Davis, Tessier, Dixon, Nicholson, McGillewie, Potts, Luce, Cooke, C. R. Collier, and E. T. Bolton. Collier was travelling well, but this was the last occasion on which he appeared, as his belt fastener pulled

through, while Dixon broke an exhaust valve. Thanks to Mr. Straight's excellent handicapping, there was a close finish, though it is curious that of a group of seven riders who had 1m. 30s. start one rode a free engine Rudge, another a Triumph complete with stand and mudguards, and others rode stripped machines. The machine ridden by the winner, Hunter, had been timed to do 68 m.p.h. in practice. The result was as follows:

	Rider and machine.	Cyls.	stroke.	Bore and		Start.	
				c.c.	m. s.		
1.	H. Hunter (5 J.A.P.)	2	85	×58	666	1	10
2.	H. Martin (2½ Martin)	1	85.5	×60	345	1	25
3.	M. Campbell (3½ Triumph)	1	85	×88	499	1	45
4.	S. T. Tessier (4 Bat)	2	74	×64	580	0	50
	L. F. Ebbutt (3½ Kerry)	1	85	×88	499	1	35
	E. A. Collier (3½ Zenith)	1	85.5	×85	488	1	40
	J. Forgan Potts (5 Indian)	2	70	×83	638	0	50
	A. J. Luce (5 Bat)	2	85	×65	740	0	45
	W. S. Spencer (3½ Rudge)	1	85	×88	499	1	30
	E. T. Bolton (7 Indian)	2	82.5	×98	994	0	5
	L. G. Nicholson (3½ Triumph)	1	85	×88	499	1	30
	Lieut. D. J. McGillewie,						
	R.N. (3½ Rudge)	1	85	×88	499	1	30
	S. R. Cooke (3½ Rudge)	1	85	×88	499	1	30
	F. L. Davis (3½ Rex)	1	84.5	×87	489	1	50
	D. C. Bolton (2 Martin)	1	76	×55.5	297	1	40

The winner's time was 5m. 57½s.

The next motor cycle event was the A.C.U. Inter-team Race for teams of three motor cycles entered by clubs affiliated to the A.C.U. Each team consisted of one single machine up to 500 c.c., one multi-cylinder up to 670 c.c., and one passenger machine up to 1,000 c.c. All had to be standard machines fully equipped for the road. Marks were

The Inter-club Meet at Brooklands.—

Starters for the A.C.U. short distance handicap at Brooklands.

allotted as follows: First over the finishing line one mark, second two marks, and so on. The winning team was the one the riders of which together obtained the least number of marks. The winning team received a silver cup, and each member was to receive a silver Herkomer medal. Each member of the second team was to receive a bronze Herkomer medal. All the machines started together, Colliver, thanks to his Gradua gear, making quite the best acceleration at the outset. The Purley and District team, though dis-

qualified for not having a sidecar machine among the number, started, and one of their members (Ebbutt) had a nasty toss just by the entrance to the railway straight. Mr. Orde was the first to notice the accident, and went off to his assistance, while Prince Henry, borrowing a pair of glasses from a spectator, showed the greatest concern about the *contre-temps*. Baker White, in the Surrey M.C.C. team, had his belt pull through and twist round his rear mudguard. The result was as follows:

STREATHAM AND DISTRICT TEAM.

1. S. T. Tessier (5 Bat). Time, 5m. 13½s.
2. W. O. Oldman (3½ Zenith).
4. A. R. Hunter (8 Zenith and sidecar).
7 points.

NORTH-WEST LONDON M.C.C.

3. E. A. Colliver (3½ Zenith).
8. R. L. Prinz (5 Bat).
11. A. E. Woodman (7 Indian and sidecar).
22 points.

HERTS COUNTY A. AND AEC. (M.C. SECTION).

5. C. C. Cooke (3½ Triumph).
7. G. S. N. Carter (5 Matchless).
10. G. W. Dixon (7 Rex).
22 points.

The two clubs last named tie for second place.

The Surrey M.C.C. lost one man, A. Baker-White, and the Purley and District team, as stated above, was disqualified.

BRISTOL M.C.C. TRIAL TO LAND'S END AND BACK.

This event started last Friday evening at seven o'clock, the distance of two hundred miles having to be completed in the schedule time of ten and a half hours, fifteen minutes each being allowed at Exeter and Bodmin for replenishments. Gold medals were awarded to all riders completing the journey within the total eleven hours.

Of the eighteen original entries, only seven started, the deficiency being doubtless due to counter attractions in the Scottish Trials and the Exeter open hill-climb.

Troubles soon made themselves apparent, and only P. Grout, E. Kickham, and Eli Clarke, all on Douglas machines, reached Land's End on time, Davies (3½ h.p. Rudge) being only 1½m. late through losing his way. On the return journey, E. Clarke ran over a dog at Camborne, and broke his frame, thus leaving only Grout and Kickham in the running, and they reached Bristol dead up to time, their Douglasses doing the whole journey without a hitch.

Inter-club team
race for "The
Motor Cycle"
Cup.

The three riders
who represented
the club are seen
with a number
of their fellow
members.

Bradford M.C.C. Open Hill-climb.

IN comparison with the last open hill-climb on the acclivity on Barton Moor the management was good and the weather somewhat sultry. There was a satisfactory entry, and a few crack riders present stimulated the interest in the event.

A New Timing Apparatus.

The event was started over one hour late, caused chiefly through a fault in the electric wire of the new electrical timing apparatus, which worked splendidly when once started. The apparatus, which is the invention of Mr. A. Griffiths, manager of the Bradford Electrical Engineering Co., employs one watch only, and that at the foot of the hill, and is worked by means of threads which are broken by the competitors themselves. These threads both start and stop the watch, so that the personal element is altogether eliminated.

When all was in order E. Myers, on a 2½ h.p. Enfield, opened the proceedings in Class I. for lightweights conforming to 1911 T.T. regulations. Results:

Rider and machine	Time.
1. E. Myers (2½ h.p. Enfield) ...	69½s.
2. T. Hargreaves (2½ h.p. Enfield) ...	104½s.

CLASS II.—Standard singles up to 500 c.c.

1. S. H. Newman (3½ h.p. Ivy-Precision)...	53½s.
2. J. Bottoms (3½ h.p. Bradbury) ...	54½s.
3. J. H. Slaughter (3½ h.p. L.M.C.) ...	57½s.

Bottoms punctured at the first attempt so was allowed another run, whilst Newman nearly lost his chances by a most alarming bump immediately after the start.

CLASS IIA.—Same as Class II., but for amateurs only.

1. J. Bottoms (3½ h.p. Bradbury) ...	54½s.
2. W. J. Sproule (3½ h.p. Premier) ...	67½s.
3. D. Wilson (3½ h.p. Bradbury) ...	68s.

CLASS III.—For standard touring twins. Strange to relate, all the classes confined to twin-cylinder machines were abandoned owing to lack of entries.

CLASS IV.—For standard two-speed gears.

The only starter, G. Riddiough (3½ P. and M.), when called upon to stop and restart on the hill was very unhappy, and finally fell on top of his machine.

Erlo Myers on a 2½ h.p. Enfield, the first man to be dispatched.

CLASS V.—Confined to members of the Ilkley M.C.C.

1. Harold Moore (7 h.p. Rex) ...	51s.
2. J. A. Hoffman (3½ h.p. T.T. Triumph) ...	54½s.
3. { J. N. Longfield (3½ h.p. T.T. Triumph) ...	55½s.
J. K. Campbell (5 h.p. Indian) ...	

Bradford M.C.C. Third Annual Open Hill-climb. F. Scriven weighing a competitor. The ballast used by the competitor will be noted, which in this case consisted of two large stones.

CLASS VI.—For single-cylinder racing machines not exceeding 500 c.c.

Newsome had a few jumps at the bend, and his machine seemed to run very quietly in comparison to the others, his exhaust pipe being attached to the silencer and not detached as all the rest. His time not having been taken on the first ascent he was allowed another trial.

1. W. F. Newsome (3½ h.p. T.T. Triumph)...	50½s.
2. J. Woodhouse (3½ h.p. Dot-Precision) ...	51s.
3. W. G. McMinnies (3½ h.p. T.T. Triumph) ...	53½s.

CLASS VIA.—Same as Class VI. for amateurs only.

1. S. Grange (3½ h.p. T.T. Triumph) ...	54½s.
2. J. H. Hoffman (3½ h.p. T.T. Triumph) ...	55s.
3. W. G. McMinnies (3½ h.p. T.T. Triumph) ...	55½s.

CLASS VIII.—Any machine up to 1,000 c.c.

1. A. J. Moorhouse (7 h.p. Indian) ...	49½s.
2. W. F. Newsome (3½ h.p. T.T. Triumph)...	51½s.
3. J. Woodhouse (3½ h.p. Dot-Precision) ...	53½s.
4. { S. A. Newman (3½ h.p. Ivy-Precision) ...	54½s.
H. S. Shaw (7 h.p. Indian) ...	

CLASS VIIIA.—Same as Class VII., for amateurs only.

Shaw made a very fast ascent this time, making no mistake, and finishing up with the fastest time of the day.

1. H. S. Shaw (7 h.p. Indian) ...	48s.
2. S. Grange (3½ h.p. T.T. Triumph) ...	53½s.
3. J. N. Longfield (3½ h.p. T.T. Triumph) ...	58s.
4. V. Pratt (3½ h.p. Ivy-Precision) ...	58½s.

No formula was used, but each rider had to bring his weight up to a set standard, the machines not being weighed.

The judges and marshals worked extremely hard, and it would have been as well if the number of the latter could have been larger, especially at the top of the hill.

CLUB NEWS.

Competitors at the start of the Birmingham M.C.C. Lincoln and back Reliability Trial for the Sangster Trophy on Saturday.

Burnley A.C.

On Saturday, August 5th, a hill-climb has been arranged on Thorney Holme Brow, and a start will be made from headquarters at 2 p.m.

Weybridge and District M.C.C.

A general meeting will be held at the Ship Hotel, Weybridge at 8.30 p.m. on August 3rd, and riders attending and enrolled as members will be regarded as founder members.

Doncaster and District M.C.C.

Several members spent a most enjoyable time on Thursday last at Stapleton Park, near Pontefract, kindly placed at their disposal by Mr. W. H. Hope-Barton, on the occasion of an inter-club competition for members of the Northern League. This competition, the first of its kind organised by the Doncaster Club, took the form of a flying kilometre handicap, and proved a great success. The party of about forty included riders from the Doncaster, Barnsley, and Pontefract clubs. The winner turned up in W. Brenchley, of the Doncaster Club, F. Lee, of the Pontefract Club, being second. The fastest time of the day was made by Tom Dunk, Barnsley Club, who covered the

kilometre in 34s. The club has to thank the lady members of the party for providing a most sumptuous tea, which was much enjoyed under the magnificent trees of Stapleton at the conclusion of the afternoon's sport.

Newcastle and District M.C.

The two days' reliability trial on August 6th and 7th, 1911, from Newcastle-on-Tyne to Stranraer and back will start from the club garage at 6.30 a.m. Any local motor cyclists desiring to join the club will be welcomed, and will be eligible to ride in the trial. Application should be made to Mr. E. Hawkins, secretary, 3, Saville Row, Newcastle-on-Tyne.

Birmingham M.C.C.

The club held its second annual reliability trial to Lincoln and back on Saturday last. There were twenty-one entries and nineteen competitors faced the starter at Perry Barr, Birmingham, at 8.0 a.m.

The outward route was *via* Ashby, Nottingham, and Newark, whilst the return had to be made *via* Nottingham, Derby, and Burton to Birmingham, a total distance of 173 miles. Miss N. Hough pluckily drove her $3\frac{1}{2}$ h.p. Alldays and sidecar over the whole distance, though she had trouble with her compression tap blowing off, and later ran out of petrol, which necessitated her and her passenger pushing the combination some distance. She completed the double journey, however, in just under the schedule time.

The following competitors completed the journey within nine and a quarter hours, excluding the one and a quarter hours lunch stop, and, therefore, qualify for bronze medals:

H. Ball (Triumph), Seymour Smith ($3\frac{1}{2}$ h.p. Norton), F. E. Hill ($3\frac{1}{2}$ h.p. Zenith), S. Wright ($3\frac{1}{2}$ h.p. Humber), S. K. Jones ($3\frac{1}{2}$ h.p. L.M.C.), A. Young ($3\frac{1}{2}$ h.p. Abingdon), V. Underhill ($3\frac{1}{2}$ h.p. Norton), W. H. Egginton (5 h.p. Zenith and sidecar), Miss Hough ($3\frac{1}{2}$ h.p. Alldays and sidecar), R. W. Duke ($3\frac{1}{2}$ h.p. Zenith), K. Clarke ($3\frac{1}{2}$ h.p. Corah), R. N. Corah ($3\frac{1}{2}$ h.p. Corah), J. Pollock ($3\frac{1}{2}$ h.p. James), S. A. Rowlandson (Rudge), and S. C. Perryman ($3\frac{1}{2}$ h.p. Ariel).

Herts County A.C. (Motor Cycle Section).

More entries have been received for the Kendal run than was the case last year when the tour was most popular. The Sunday portion of the tour does not form part of the competition, but a most interesting and varied "go as you please" run has been mapped out through Windermere, Grasmere, Thirlmere, Keswick, Troutbeck, Ullswater, Patterdale (a look at Kirkstone Pass), Penrith, Appleby, Brough, and Barnard Castle. The tour affords a good opportunity for those who are contemplating entering for the six days' trial, as a large mileage of the actual Six Days' Trial route will be covered. The entries closed yesterday, but they will be received by wire up to this (Thursday) evening by Mr. C. C. Cooke, North Mimms, Hatfield.

Bristol M.C.C. Run to Land's End and back last week-end. A group of competitors at Land's End. (See page 808).

A. W. Brittain, of Cambridge and Buxton, who recently made two plucky attempts to capture the six days' record. In the second attempt, which commenced on Wednesday midnight, he covered approximately a thousand miles in two days, but had to give up on Friday evening owing to a bad attack of cramp. His mount is a Rudge.

Derby and District M.C.C.

The proposed timed reliability run to Torquay has been dropped in favour of a speed-judging and reliability competition on August 7th, for which an interested gentleman has offered a ten guinea silver challenge bowl and a gold medal. The events arranged for August are: 5th, Speed trials, Kulland Ward; 7th, reliability trial; 19th, hill-climb (Cross-o'-the-Hands); 30th, two miles speed event at Hilton.

Chesterfield and District M.C.C.

There were thirty-eight entries for the hill-climb held on July 19th, and awards were made as follows:

Sidecar and passenger.—W. H. Ward (3½ h.p. Triumph and sidecar).

Novices' climb.—W. Waddington (3 h.p. N.S.U.).

Members' hill-climb.—W. H. Wood (3½ h.p. Triumph).

Flexibility trial.—E. Stacey (Roc).

There will be open speed trials in Hardwick Park on August 16th, and the hon. sec., Mr. L. Smith, of "Rose-mont," Chesterfield, will be pleased to hear from any motor cyclists desiring to compete.

Worcestershire M.C.C.

The Land's End and back reliability trial on August 26th, 27th, and 28th will be open to all motor cyclists in Worcestershire; entrance fee, 2s. 6d., and 2s. will be charged non-members for one day's membership. Particulars on receipt of entry fee. Hon. sec., E. H. D. Cook, Foregate Press, Worcester.

Streatham and District M.C.C.

Full particulars of the Members' Hill-climb to be held on the 5th August can be obtained from Mr. E. B. Ware, 38, Rainbow Street, Camberwell, S.E. The venue of the hill will be published the day before on the club notice boards at the Crown and Sceptre Hotel, Streatham Hill, and the Clayton Arms, Godstone. Competitors will be divided into six classes, including lightweights, single and multi-cylinder touring machines, machines up to 500 and up to 1,000 c.c., and passenger motor cycles. Prizes in Classes 1, 2, 3, and 6 will be awarded on formula, and in 4 and 5 on time.

On August Bank Holiday there will be a social run to Selsey Bill leaving headquarters at 7 a.m.

Scottish Border M.C.C.

The hill-climbing test on Gladswood Hill and Redpath Rig, near Melrose, on July 22nd, resulted as below:

CLASS I.—Single-cylinders.

	Points.
1. J. Laing (Triumph)	123.0
2. W. Kirkpatrick (Triumph)	119.0
3. W. P. Gaylor (Calthorpe)	116.0

CLASS II.—Lightweights

1. Tom Gillies (Douglas)	106.0
2. G. Pringle (Enfield)	78.0
3. Alex. Longmuir (Douglas)	76.4

CLASS III.—Multi-cylinders.

1. A. J. C. Lindsay (Matchless)	109.8
2. J. Burns (Indian)	102.4
3. T. Scott (Roc)	79.7

All the winners used Ross petrol.

Cork and District M.C.C.

A race meeting was held on the sands at Ganyoe on Saturday last, which provided some very interesting contests. The venue is not altogether a suitable one, as the tide does not go out far enough to give much room for turning, and further, owing to the hot weather, the sands dried very quickly, and were loose in consequence. Nevertheless the racing was exciting and was witnessed by a big crowd of spectators.

The results of the three events were as follows:

Flying Half-mile.—1, P. A. Egan (3½ h.p. Triumph), 35½s.; 2, G. Goode (5 h.p. V.S.), 38½s.; 3, M. J. Chambers (2½ h.p. F.N.), 40s.

Two Miles Handicap.—1, M. J. Chambers (2½ h.p. F.N.); 2, P. H. James (3½ h.p. Triumph); 3, W. G. Hosking (3½ h.p. Triumph).

Four Miles Handicap.—1, W. J. Hosking (3½ h.p. Triumph); 2, M. J. Chambers (2½ h.p. F.N.); 3, P. H. James (3½ h.p. Triumph).

Special prize presented by the hon. sec., R. S. Russell for the best performance by a novice, was won by P. H. James.

The start of the Bradford M.C.C. Reliability Trial to Dunbar and back.

A big crowd assembled to see the competitors start on their long ride.

Catalogues Wanted.

Messrs. Severo Dantas and Co., Rua 7 de Setembro 41, Rio de Janeiro, will be glad to receive catalogues of motor cycles and accessories.

U.H. Magnetos.

Messrs. S. Wolf and Co., of 115, Southwark Street, London, S.E., announce that they have taken up the agency for U.H. magnetos, starting from August 1st.

Second-hand Bargains.

For a firm of dealers in second-hand machines to satisfy everybody is by no means an easy matter, and when such a happy state of affairs exists, it reflects no little credit on the principals concerned. That being so, we desire to place on record the fact that several readers have written us lately testifying to the fair square dealing that they have received at the hands of the Hitchen Motor Exchange Co., Ltd., Euston Road, Morecambe.

A Combined Belt Punch and Cutter.

The Duco combined belt punch and cutter is a particularly handy tool for motor cyclists, and reduces the number of accessories carried. An important point which might be overlooked in connection with this tool is that it obviates the necessity of cutting the belt after punching, which frequently results in the fastener pulling through very quickly. We find that in using the tool the wing screw is difficult to turn when the cutter comes in contact with the belt. It would be much easier were the cutter diagonal in shape. The article is sold by Brown Bros., Ltd., Great Eastern Street, E.C.

**A Reliable Rubber-studded Cover.**

A month or two ago we fitted a Midland rubber-studded cover to the front wheel of one of our $3\frac{1}{2}$ h.p. machines, and covered 2,100 miles without experiencing a single puncture. At this distance the cover was removed, as the owner of the machine was about to start a tour, but there is no sign of a cut or gash in the cover. It would certainly last many hundreds of miles yet in its present condition, but we consider that retreading the tyre will at least double its life. Round about Easter time we had excellent opportunities of proving the efficacy of the Midland cover as a non-skid.

Auxiliary air chimney, as fitted to T.T. Douglas motor cycles. It is surprising how this little fakement is being adopted on different makes of competition machines.

**An All-weather Saddle Protector.**

V. W. Hart Johnson, Fakenham, sends particulars of an all-weather saddle protector which he has patented. Briefly the device consists of a waterproof covering carried in the metal case just below the saddle cantle. The covering works on a spring roller. When required the cover is unrolled, passed over the peak of the saddle, and fastened to a hook on the saddle pin.

Irish Motor Directory.

The latest edition of the Irish Motor Directory has just been published by W. Tempest, printer, Dundalk. The book has grown considerably since we first knew it, and is now a volume of no mean dimensions. It gives special articles on automobile affairs for the past year in Ireland, aviation, motor cycling, automobile law, and a motor directory, which is most useful to those who are seeking for small registration numbers of which a few may still be obtained in Ireland.

A novel petrol tank filler-cap designed by Mr. White, of Coventry. As may be seen this cap is not screwed on but affixed by means of a small spring.

those who are seeking for small registration numbers of which a few may still be obtained in Ireland

A Useful Series of Maps.

We are in receipt of the latest R.A.C. map, edited under the direction of the Royal Automobile Club by George Philip and Son. The particular section referred to is Sheet 5, which deals with Carnarvon, Denbigh, and Anglesey. These maps are noted for their clearness and accuracy, and with each is given a list of hotels and repairers and the various golf courses in the neighbourhood.

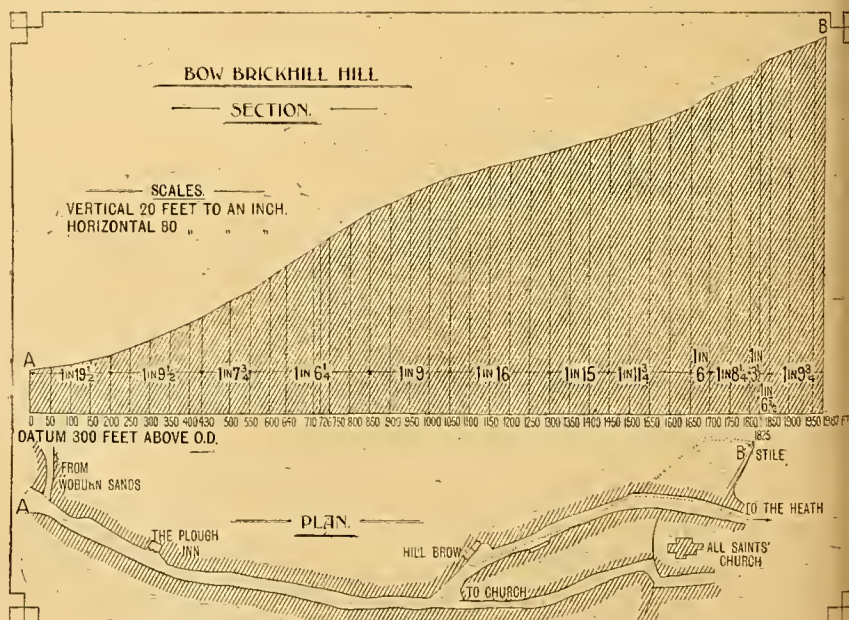

Rey exhaust whistle.

The Rey Exhaust Whistle.

Still another pattern of exhaust whistle is the one illustrated on this page and brought out by A. P. Rey, of Heath Street, Hampstead, N.W. It is specially designed for use on free engine Triumphs, and is made of brass throughout. This whistle is claimed to give a note at very low speeds and also with the exhaust valve lifted for running down hills. Its construction will be grasped from the accompanying sketch.

A Fine Climb.

Chas. S. Lake, the well-known mechanical engineer and motor cycle expert, has just witnessed the climbing of Bow Brickhill Hill, Buckinghamshire, by Mr. Mellor Jameson, on a $3\frac{1}{2}$ h.p. Zenith Gradua. In addition to Mr. Lake there were four other witnesses. It will be seen from the accompanying contour that there is a small section of 1 in $3\frac{1}{2}$ near the summit, and it is interesting to note that the surface consists of three inches of loose sand, unbroken metal, and other obstructions.

The "100%" A. J. S.

The Two A. J. S. Machines which secured First Class Certificates in the Northern Centre Quarterly Trial.

The competing machines were absolutely Standard Models, exactly as sold to the Public.

London: H. TAYLOR & CO., Store Street, Tottenham Court Road.

AGAIN

THE 2½ A. J. S. LIGHTWEIGHT PROVES ITS SUPERIORITY.

In the A.C.U. Summer Quarterly Trial (Northern Centre Event) which took place on July 22nd,

Two A. J. S. 2½ h.p. Lightweights were entered, BOTH made non-stop runs, and BOTH secured First Class Certificates

Thus repeating the previous unprecedented performance of the A. J. S. Team in the Spring Quarterly Trials (Yorkshire Centre Event).

If you want a machine on which you can rely under all circumstances, which is easy to handle and will climb any ordinary hill, let us send you particulars of the 2½ A. J. S.

A. J. STEVENS & CO., Ltd.,
Retreat Street, Wolverhampton.

Success of the RICH in the London & Edinburgh and Six Days Record

ONCE

USED

ONE OF THE THOUSAND OPINIONS.

I am pleased to tell you that in preparing for the London and Edinburgh run, I fitted one of your Covers and Tubes to my motor cycle, along with a tyre and tube of another make. Am pleased to say that your tyre gave me no trouble at all, I had not even to use the pump, and gained highest award. Have done about a thousand miles on it now, and it appears none the worse for wear. I am fitting another of your tyres on the other wheel, as I am riding a six days' record next week.

Yours faithfully, HEDLEY V. SWIFT.

Sheffield, 21st June.

I am pleased to let you know that in my ride of Six Days, covering in all 2,025 miles, I had no trouble at all with my tyres, excepting one puncture. This trouble was soon overcome by taking out the punctured tube and fitting a new one. I did not on any other occasion put a pump on either valve, clearly proving that your system of Detachable Tube is excellent. I was on some very bad roads, and am delighted to say I can find not even a small cut in either tyre. This speaks well for your tyres, because those long rides are just the kind to test their worth. You may use this letter to any purpose you desire.

Yours faithfully, HEDLEY V. SWIFT.

SATISFACTION—

the cheapest form of

ADVERTISEMENT!

We are seeking to give you satisfaction. Our UNIQUE system of business makes it impossible for you to be dissatisfied in dealing with us, as if you order anything from us that does not suit you, you are at liberty to return it at once and have your **MONEY BACK**. We do this whether the amount is 1/5 for a pair of goggles or £45 for a motor cycle. You get it immediately the goods are returned to us. If you have not TRIED US, do so. REMEMBER, we are the ONLY FIRM in the whole world who do this. **DEAL WITH THE MONEY-BACK FIRM.**

NOTE.—It is not a question of crediting you with this, that, or the other; it is not a question of exchanging the goods, but when an article does not suit you, you have the **MONEY YOU PAID RETURNED AT ONCE, WITHOUT DEDUCTIONS**, as with others.

NOTE the following **SPECIAL CUT PRICES FOR CASH**. At these prices we cannot swap.

World's Records

—WITH THE—

HELLESEN DRY BATTERY IGNITION SYSTEM AT BROOKLANDS.

Mr. F. A. McNab
riding a

3½ h.p. TRUMP-JAP
captured

2 HOUR RECORD
Covering 110 miles 297 yards.

100 MILE RECORD

Time:—109 min. 8½ sec.

Mr. McNab used an ordinary standard HELLESEN Dry Battery and "H. H." COIL taken from every-

day stock, which, as usual, gave perfect satisfaction. This performance again proves the superiority of the "HELLESEN" system over every other form of ignition, yet, although the best system, it is the cheapest.

Install this system on your motor cycle or car. We will give you every assistance willingly.

Catalogues sent free—anywhere.

A. H. HUNT,
115-117, CANNON STREET,
LONDON, E.C.

MOTOR BICYCLES FOR SALE.

MATCHLESS, T.T., 8-hp. overhead J.A.P., order from makers, and £20 deposit paid, but still delivered; as unable to wait, been obliged purchase of make, and therefore prepared to forfeit £5 to any who will take delivery.—Owner, 6, Longfield Gardens, Romford.

NEW Hudson, 1911, fitted with Armstrong 3-speed gear and clutch, 2 1/2-hp. J.A.P. engine, quite a only ridden 150 miles, with accessories; lowest price £40, owner buying motor car; can be seen and at any time after 6 o'clock on Saturday 2 o'clock.—Fraser, "Hannock View," 470, Seven Sisters Rd., N. W. Park N.

REX, 3 1/2-hp., low built, spring forks, 1910 A carburettor (variable jets), Michelin tyres (studded back), new belt, automatic pulley, climb hill, in splendid condition; selling because of ill health; also nearly new portable house for above, £2. McKnight, Hatfield Lodge, Northside, Wandsworth Common, S.W.

HAZEL Lightweight Motors.—We are now in a position to give early delivery of our 2 1/2-hp. the lowest, shortest, and lightest machine of its position on the market, fitted with Jap engine, price 35 guineas, second-hand machines in part payment; many 2 second-hand machines in stock at reasonable prices.—Cripps Cycle and Motor Co., 24-28, Woodford, Forest Gate, London, E.

SPECIAL Dot, 1910, 7-9-hp. J.A.P., drip lubrication, magneto, free and 2-speed gear, Druid B. and B. adjustable pulley, extremely low, pretty machine, complete with coach-built sidecar, specially for ideal comfort, upboard, new Rom, Palmer, petrol better than new, carefully used fine week-ends, lamps, all spares; travelling, no time; accept £48.—G., 208, Gt. Portland St., W.

SECTION IX.

Somerset, Devon, Dorset, and Cornwall.

1911 Rudge-Whitworth, 3 1/2-hp., fixed engine, in stock, £48/15.—Moffat, Yeovil.

3-hp. Excelsior, good condition, splendid climber; Williams, 5, Kingsley Rd., Mutley, Plymouth, Devon.

FRANK REYNOLDS, Broadway, Dorset. Tel.: 8, Upwey. Telegrams: Reynolds, Upwey. B.S.A. motor cycles for hire.

SECTION X.

Scotland.

TWIN-CYL. Rex, good running condition, if equipped, £12; or near.—Grant, Frickheim.

1911 Tourist Trophy Medalist 4-hp. Twin J.A.P. speeds; £48.—Linton, cycle agents, Kirkcaldy.

INDIAN, 5-hp. twin, 1911, done 120 miles.—Apply to No. 8,035, c/o The Motor Cycle Office, Coventry.

TRIUMPH, 1907, h.b.c., good tyres; owner buys higher power; offers.—Wilson, surveyor, Res, Berwickshire.

TWO 2-speed Model E Douglas, in stock, £48 each; free engine Triumph, delivery 10 days.—11, Ladybank, Fife.

MOTO-REVE, 1909, twin, magneto, 2-hp., little used, original tyres good, Watavuta, Perfecta, Druid; £19.—Stevenson, Lhanbryde, Elginshire.

LADY'S 2-hp. Twin Moto-Reve, 1910, guaranteed perfect, spares, etc.; cost £46, accept £25.—Apply, No. 13,981, The Motor Cycle Office, 20, T. St., London, E.C.

DUNDEE—Sole agents for Douglas, New Huddersfield, etc., second-hand machines always in stock; everything for the motor cyclist; repairs.—Dundee Motor Cycle Co., Netbergate, Dundee.

LATE 1910 3 1/2-hp. 2-speed Humber, as new, ridden 1,000 miles, newly fitted, Cowey speedometer, lamp, generator uncut; satisfactory reasons for disposal.—Offers to 8,034, The Motor Cycle Office, Coventry; approval, deposit.

SCOTLAND'S Largest Motor Cycling Firm.—If you wait for months on your new mount. We can immediate delivery of Indian, Premier, Douglas, Zen, B.S.A., Rex, N.S.U., and Lincoln Etc. Besides these stock P. and M., Roe, and Norton, and can supply 7 other make.—Alexander's Motor Exchange, Lothian, Edinburgh.

SECTION XI.

Ireland and Isle of Man.

TRIUMPHS, 1911 models; immediate delivery in stock; no waiting.—Higgins, agent, Athlone, Ireland.

TRICARS FOR SALE.

LUXURIOUS 9-hp. Riley Tricar, fast, strong, £235, cost £130.—Rickard, Nancop, Gunnedah, N.S.W.

8-hp. De Dion engine tricar, water-cooled, 2 sp. wheel steering, car tyres; £15.—Saunders, Boreham, Essex.

BARGAIN—5-hp. tricar, Dunlop tyres, chain drive, wheel steering; £12.—No. 111, Humberstone, Leicester.

8-hp. 2-cyl. Water-cooled Sociable Tricar, as new, 10 doors; photo; £30.—Thornton House, Friar Green, Surrey.

6-hp. Sarolea Tricar, 26 in. wheels, in splendid condition throughout; lowest cash £12/15.—426, St. Walthamstow.

4 1/2-hp. Humber Tricar, 3 speeds, chain drive, 2 did going order; £16/10.—Ayden Bros., 7, Blackstock Rd., Finsbury Park, N.

Standardisation.

THE brief announcement we made last week regarding the standardisation of motor cycle tyre rims was heartily welcome to all classes of motor cyclists, and is a distinct proof that the Manufacturers' Union does not intend to allow the grass to grow under its feet whenever the wishes of the general body of motor cyclists are unanimous on any question pertaining to their convenience. As we pointed out, the question of rim standardisation was first mooted in *The Motor Cycle* and never lost sight of.

This question of standardisation of such an important part of a motor cycle as the wheel rims leads one to think that it might reasonably be possible to bring manufacturers to agree to make many other important details of a modern machine more interchangeable than they are at present.

It is one of our duties to try a number of accessories from time to time on machines belonging to the staff, and we invariably find that such accessories as lamps, generators, and speedometers, to mention only three articles, usually require some alteration to the machine or the articles themselves before they will fit. Lamp irons require filing down to suit the bracket on the lamp, or the lamp fouls some portion of the spring fork or brakework, generators cannot be fitted without obstructing free access to tank filler caps, and numerous other petty annoyances which do not take long to overcome, but are irritating and cause inconvenience and delay.

We should not like to see every machine so stereotyped that choice no longer existed, but we are too far away from such a state of affairs, and it is only in the direction of what are indispensable accessories that we plead for more uniformity.

A Sidecar Suggestion.

LAST week our leaderette dealt with the old question of silence as applied to motor cycles, and although we know the designers' difficulty in making a quiet single-cylinder engine, we think the sidecarist who drives a standard single is perhaps the least to be blamed if he runs his machine almost continuously with an open cut-out.

A standard single-cylinder machine has all it can do to propel a sidecar, and unless the cut-out is open overheating soon occurs, due to the greater amount of gas passing through the engine and the load being often in excess of the gear and power. To make an engine really quiet requires a very large silencer, and it has occurred to us that sidecar owners might obtain a very much quieter running engine if a large silencer were fitted under the long tube of the sidecar, and so constructed that it could be coupled to the usual small motor bicycle silencer by a flexible metallic tube. We suggest a flexible connection with some form of bayonet joint to enable the pipe to be quickly detached and left *in situ* on the sidecar when the bicycle is used solo. There should be no difficulty in the way of manufacture, and the benefit of more silent running to passenger, driver, and public would be considerable.

Anyone who has driven a standard single-cylinder sidecar combination all day with the cut-out open and mostly on half throttle will admit that the noise gets on one's nerves after a few hours, and there is no reason—beyond that of extra weight—why a large silencer should not be carried on every sidecar.

The attachment of a large silencer across the front axle of a tri-car some years ago converted a Gatling gun of an engine into an approximation to a Silent Knight. Why should not a sidecar be similarly treated?

THE innocent reader of *The Motor Cycle* sees that Jones obtained a gold medal in a certain Six Days' Trial and that Jones lost no marks. He fondly imagines that Jones merely sat in the saddle for six days and gazed blandly at the beautiful scenery selected for the route by a considerate secretary. I believe there are gold medal Joneses who have enjoyed such an experience, but it has never fallen to my lot, for I have never yet got through a trial without bad trouble; if it has not been my machine, it has been my tyres or my belts, or losing my way, or so on, and I propose to recount my most recent experiences.

The goddess Fortune had already told me in unmistakable terms that she proposed to give me a dickens of a time with tyres this summer. Before July began my car had used up five covers and eight tubes, and I had also had some thirty punctures on motor bicycles, so for the Scottish Trials I fitted the thickest and fattest non-skid cover money could buy to the back wheel of my motor bicycle. I rode it 340 miles to Edinburgh for the start, and it got there unmarked. I patted it lovingly, and mused that whatever tortures might come my way, at least I should escape punctures.

We started off from Edinburgh at 8 a.m. on Monday, July 24. and before long things commenced to go swimmingly, by which I mean it rained "cats and dogs," and rub-

ber belts would not grip. However, as I had no trouble, a slipping belt contrived to get me into Arrochar for lunch up to time. After lunch eight miles of villainous road conducted us to the famous ascent of Rest and be Thankful, and as soon as the front wheel smelt the gradient in the downpour there was a sound as of 20,000 Jake de Rosiers finishing a record lap at Brooklands, and the machine stopped moving. Belt-slip, of course.

I fitted another belt while the air was blue with over-lubrication and language all round, for quite twenty men were stalled in the same way. Ere long my hot engine said, "Low gear, please!" in its most imperious accents, so I tried to give it, only to find that the special handle-bar control I was using on my N.S.U. gear would not work. So I held in the low gear with my left hand, which is the only hand I can ever steer with, and tried to curb the machine with my right hand.

What this meant up a twisty, rutty, boulder-strewn ascent of eight miles I leave the reader to imagine. I nearly went off the road at three corners, gave a football charge on another bend to a competitor who was shortening his belt, and finally scraped round the hairpin with my features contorted in agony.

Then followed a nightmare road into Aberfeldy — hills, ruts, grease, boulders, corners — in the midst of

SCENES IN THE SCOTTISH TRIALS.

(2) E. B. Ware (8 h.p. three-speed Chater-Hea and sidecar) on Gruinard Hill.

(3) B. H. Davies (3½ h.p. two-speed Ridge) rounding the bend on Gruinard Hill.

The History of a Gold Medal.—

which my carrier snapped, sat on the back tyre, and tore it down to the canvas all the way round. Luckily I reached the night control without a burst.

A writer in *The Glasgow Herald* reviled us for "riding through some of the finest scenery in Europe as if we were passing slag-heaps," but our eyes were necessarily glued to the roadway. The first difficulty was to keep the machine upright; the next was to average legal limit—no mean feat with such going to grapple with.

Tuesday was a very similar day, except that the going was better, barring the Edzell-Banchory stretch; more rain—roads under water in many places—more belt-slip.

After lunch came Cairn o' Mount, another bad dream indeed. A steep 1 in 4 pitch at the foot set my belt slipping, and a quarter of a mile up the engine was ready to seize. I shortened the erring belt, and spying a turfy patch on the moorside, pushed up

The next control was over thirty miles away, and I had less than an hour left; several others were in like case, and in Aberdeen the unwonted spectacle was seen of three usually decorous Englishmen "blinding" along between the tramlines at more than double legal limit, what time a pawky Scotchman on a big Bat passed them going still faster—no marks lost.

Wednesday was a picnic—flat roads, fine weather. We needed both.

Thursday was another day which caused the eyes to start from their sockets with fear. The roads were mostly unspeakably bad, the bad grades were stiffened by hurricanes blowing down them, while the grease was awful. We never knew what to expect on rounding a corner. A skewbridge and a short patch of 1 in 5 might be confidently reckoned upon. Possible additions were six inches of unrolled stones, one foot of mud, two feet of loose sand, or a motor char-à-banc blocking a five-foot "road." Nearly everybody

Luncheon interval at Gairloch Hotel.

Competitors being checked at Dundonnell.

E. B. Ware stops to change the tyre on the rear wheel of his Chater-Lea.

among the heather, and charged down off the moor on to the road at an angle. All went well till I came to the deep soft repaired bit of which Bischoff had warned us—200 yards of deep mire, with enough cover for a patrol of Boy Scouts in the ruts. A six-inch track bordered each side of this fearsome patch, hugging a precipice to the left, a ditch to the right; but both tracks were choked by pushing men. I took the centre, and for a time thought I was going to buck-jump clean over it, but alas! after 100 yards I struck a deep quagmire, sank in over the rims, and my machine was ignominiously extricated by three labourers.

Hill-climbing under Difficulties.

I pushed up till the road hardened, and essaying to get started again, seized my low gear. The engine would not pick up its load on a $4\frac{1}{4}$ to 1 gear, the grade being severe, and I pushed some more, till we came to an easy landing place; here all three belts slipped, and finally I pushed up a mile with an average grade of perhaps 1 in 9, kindly officials easing my struggles towards the top, where I was done to the world.

had several tumbles. Bostock and Fontaine taking fearful tosses. I got through pretty comfortably, except that my carrier broke its lashings (three harness straps, whipcord, and copper wire) and neatly slit my second back cover in half. Fortunately the last twenty miles for the day were good going, and getting near the night control twenty minutes ahead of time, I was able to take the back wheel out and fit cover number three.

Fifteen Miles in One Hour over Awful Roads.

The fifth day was "ghastly"—there is no other word for it. The grease and ruts were so bad that in the first hour after starting I did exactly fifteen miles, though I never once left the saddle. The good road on which I hoped to catch up time never came; and when at last I cast fear to the winds and opened the throttle, I left the official route owing to an unmarked turn (the marking was bad all through), and went miles out of the way, till the road got so bad that I knew it could not possibly form part of the Scottish Trials.

Reaching Fort Augustus no control could be found, till at last I learnt it was situated on a bleak hillside

The History of a Gold Medal.—

a mile from the town, where there was neither "pub," shelter, nor garage. Here we wasted two and a half hours for a timed hill-climb, as the result of which we had no food between breakfast at 7 a.m. and lunch at 3.30 p.m.

Worse was yet to come. The remaining sixty miles of road before lunch were perhaps the most trying of all the week; and along them I had two more punctures, tore out a tyre valve, had an inner tube go at the join, and finally broke my inflator connection, so that I had to average over 30 m.p.h. for a long distance over villainous roads with the back tyre partially deflated and the machine rolling like a tipsy sailor.

One Prolonged "T.T. Blind."

Here the weather saved my gold medal; for there had been no rain on the Grampians, and the last few miles into Newtonmore were dry and fast. One competitor had never been in a trial before; he said he had expected a sedate tour when he entered, but owing to the bad weather and the "long control" system favoured by the Scottish promoters, it degenerated into one prolonged "T.T. blind." Beautiful roads over the Grampian summit into Aberfeldy; no marks lost, but, alas, when just entering the night control I spotted a stone cut in my back tyre an inch long.

Next morning my hands were so sore with handling the tyres that I did the silliest thing of my life. The cut was just by the valve, and I thought the simplest thing would be to fit an inside gaiter. That cover was the tightest thing in covers ever seen, and after I had completely knocked myself up in the effort to get cover plus gaiter clinched in the rim, Thomson and MacGregor came to my rescue, and the three of us just got it on in time.

We went out to Amulree for another hill-climb, and

when we started away again a flint got wedged in the cut tyre, and ate through gaiter and tube in no time. I took no more risks, but tore the back wheel out, and slipped on my fourth cover of the trial. Scraping to recover lost time, I again missed my way at an unmarked turn, and lost several miles; but no further *contretemps* occurred, and after a busy and anxious week I trickled mildly into Edinburgh without having lost a mark. If such were the experiences of a gold medal winner, what must some of the "also rans" have passed through?

A Splendid Test of Men and Machines.

The pluckiest and most unfortunate man in the trial was J. Donaldson, whose crank case broke before lunch on the first day. Three times at three separate smithies he fixed it on with iron bands and huge plates, only to have it come hopelessly adrift when almost within sight of the finish; and between these herculean labours he sandwiched the most thrilling experiences.

Did not he and two others ride from Arrochar to Aberfeldy over ninety miles of most perilous roads on a pouring night with but one lamp between them? Rumour says Donaldson drove all three machines over Rest and be Thankful, twice returning on foot to the bottom with the precious lamp in his hand to drive up another machine.

At one point along this road I think a coach and four were buried in a rut last winter; at any rate, the surveyor was underlaying the road with new foundations, and had excavated half its width for this purpose just round a bad corner. I nearly fell into this pit in broad daylight, and how the gallant trio escaped this and other dangers in the dark I know not.

The Scottish Trials remain unrivalled as a test of men and of machines; but regarded as a picnic—well!

B.H.D.

Motor Cycle Racing in Russia.

THE annexed photograph shows how the pastime is being followed in Russia, where races for different types of motor cycles have just been held on the Nolkonka Road, St. Petersburg.

The first event was a lightweight race over 10 versts, and was won by Yourgins (1½ h.p. Wanderer) in 13m. 50s.

The second event was an open race over 5 versts, and was won by an Englishman named F. Holden.

(5 h.p. Indian), who accomplished a Russian record for the distance, viz., 4m. 7¾s.

There were twelve entries in the third event—a 10 versts handicap—the result being: First, Belling (7-9 h.p. Peugeot), from scratch, in 8m. 24¾s.; Holden on his Indian being second.

The fourth event was a 40 versts race, the result ending in a Triumph landing home first in 41m., followed by an N.S.U. in 42m. (A verst = ⅔ of a mile.)

A group of British and Russian riders and officials who took part in the races described in the accompanying letterpress.

How to Illuminate the Speedometer.

So many of the motor cyclists whom I met in the Isle of Man were kind enough to express some little admiration for a simple little home-made electric speedometer light which I had rigged up on my 7 h.p. Indian, that it struck me there might be others who, if they had it put before them, might avail themselves of the idea. As a matter of fact, several people have since written to me asking for directions how to make the little affair, whilst others have paid me the tacit compliment of "cribbing" the notion wholesale. The more who do this, however, the better shall I be pleased.

Truth to tell, there is little that is original about it, but it is so cheap and easy to rig up, so small, so handy, and so varied in its uses that I have quite decided never to be without it. It is not only useful in night riding, but in my opinion it lends an added interest to this kind of work, for it seems to me that if a speedometer is of any value by day, it is equally, if not more so, by night—when unfortunately nearly all motor cycle instruments are invisible.

When I first decided I must have a light for my speedometer, I had an idea that what I wanted was something capable of giving a dull glow just sufficient to illuminate the dial constantly, but on fixing up an arrangement to accomplish this end I speedily found that it was worse than useless. To begin with, it wasted current in such a prodigal manner

required either for noting the speed or for reading the trip mileage. The ability to do this at night is most valuable.

The business part of the apparatus is shown in the sketch (fig. 1), which indicates how I have fixed up the light to illuminate my Jones speedometer. The lamp and its holder are supported in a little bent brass strip bracket clipped under the head of the bolt which tightens

Fig. 2.—The component parts of the lamp and its fittings.

the handle-bar clip of the speed indicator. A carbon filament lamp is to be preferred to a metal filament, as it is cheaper, consumes less current, and gives more than sufficient light. A high efficiency lamp is apt to dazzle one's eyes. Indeed, unless one has a powerful head lamp, it is perhaps as well to reduce the illumination of the carbon filament by gumming a little thin tissue paper (a cigarette paper, for instance) over the bulb. This diffuses the light, and prevents one's eyes catching a reflection of the incandescent filament in the dial glass.

Fig. 2 illustrates the component parts of the lamp and its fittings. On the left is the bent brass bracket also shown in fig. 1; on the right is the lamp, which is of the kind used in the ordinary shilling four-volt pocket flash lamp; whilst in the middle is the insulated adapter, into which the bulb is screwed.

This adapter can be easily bought, but in any case should present little difficulty in manufacture, as it consists of a little piece of brass tube threaded to take the screwed shank of the bulb, and filled in at the back with a plug of insulating material, between which and the brass bracket is introduced a thin washer of fibre or indiarubber. Considering, however, that the price of the ready-made adapter complete with a little foot piece (which is not in this particular application required) is only twopence, it is perhaps easier bought than made. Through the side of the brass tube passes a small binding screw, which serves for the attachment of one of the battery wires. The other is earthed to some suitable point of the frame, and is thus in connection with the brass bracket. The latter, again, is in connection with the central stud of the glow lamp through the screw which holds the whole affair together.

Covering the glow lamp, adapter, and the terminal is a small piece of india-

rubber tube, which, in addition to forming, as shown in fig. 1, a cowl for the lamp, prevents the latter from shaking loose, and finally makes everything waterproof and of neat appearance.

The arrangement of the push switch is shown in fig. 3. The battery, which costs sixpence, and is of the kind used in pocket flash lamps—these small cells can be bought almost anywhere—is carried in the pannier tool-pouch, where it takes up very little room, measuring only 2½ in. high, 2 in. wide, and 2 in. thick. So long as it be used only for "flashing," which is all that is necessary, this type of battery has quite a long life, and in ordinary circumstances should last a whole season. The switch, which is connected up by ordinary house-wiring "flex," costs threepence, is a model of a bell-push, and is secured to the tank by a pat of shellac, which when dissolved in spirit comes away without leaving any mark behind. On my machine it is fitted close up to the saddle, the short earth wire being conducted, as shown, to one of the tank clips. If preferred, there need be only a single wire in the whole circuit, as the battery in the toolbox can be permanently earthed to the carrier, and the switch introduced in the return wire. On my machine there was no clip handy, and I therefore carried the earth wire to the tank. It is important to leave enough flex at the steering-head to take up the motion of the handle-bars.

My total cost for fitting was 1s. 11d.

Fig. 3.—The arrangement of the push switch.

I use the little affair for the following additional nocturnal purposes. Ascertaining what petrol I have got, as I have no gauge. I unhook the lamp, and pop it inside the tank through the filler cap. The same applies to the oil supply. As I always extinguish the head lamp when filling up out of the spare petrol can, it comes in handy in this connection, the reflection from the dial being enough to steady one's aim for ascertaining the level of oil in the crank chamber sump. To detach the lamp it is only necessary to slack off the bolt of the speed indicator clip.—W.G.A.

OCCASIONAL COMMENTS

By "IXION"

The Life of a Patch.

Some weeks ago I described the present condition of two tubes which I patched over a year ago, relating how the rubber of both patch and tube had chafed and worn thin, and how the rubber beneath the patch had torn. That this is not true of all patches is plain from a tube sent me which sustained two very bad punctures while being ridden home from the A.C.U. trials last summer (1910). It was mended by the roadside with Surridge's patches, and its present condition is absolutely perfect. Neither patch evinces the slightest tendency to peel or lift, though the tube has been in constant use ever since, and the material, both of the patch and of the tube underlying them, is as sound and solid as if the patch and the tube were brand new.

Another correspondent reminds me that vulcanisation also has its drawbacks, as it is only in very few cases that a rubber tube will stand being "cooked" twice. For instance, if a tube be punctured, and the damage be repaired by vulcanisation, should a further puncture be made through the repaired part, or close to it, a second vulcanisation is not likely to be successful, for the second cooking may, and often does, ruin the nature of the rubber, and start its disintegration.

Beltslip.

I am told by some of my motor cycling friends that my belt experiences are rather unusual, especially in relation to the amount of slipping I get when the roads are awash with surface water, or when I am riding in a heavy storm. Some of my critics inform me that I try to get too big a mileage out of my belts, and that I ought always to use a new belt in bad weather, as a rubber belt never slips if it is the right length, and is not old enough to have lost its elasticity. However, I again return to the charge with some new evidence.

I have heard that in the Scottish trials most of the men had heart-breaking struggles to make their belts grip on the hills when the heavy downpours commenced, and that many of them were telegraphing to England for leather belts, with which they had little better success, for—as everybody knows—leather belts take some running in, and a new leather belt in rain is as bad as an old rubber belt.

Then, again, Mr. Catt complained after his six days' record that he had trouble with his rubber belt in the wet, and my own all-weather experience amply bears out these statements. Now that two-speed gears are becoming almost standard, the trouble in some cases is likely to be aggravated, for I find wet belts slip worse the faster they are run. I do not see how belts can be improved very materially, and I feel sure the all-weather rider of a belt-driven machine will continue to be at the mercy of this nuisance under exceptional conditions until we get protected belts or bigger belt pulleys, and larger contact area.

The "Long Control" System in Competitions.

I am very strongly of opinion that the plan of using "long controls" in a reliability trial which is not an absolute non-stop ought to be abandoned. The recent Scottish trials form an excellent example of my point, and especially if they are contrasted with the A.C.U. Six Days' Trial. In the Scottish event, the riders are not checked oftener than once in forty miles; in the English trials the length of the controls varies between extremes of eight and forty miles, but twenty miles is probably about the average.

Let us see how this works out. In the Scottish trials we will suppose a rider breaks a piston ring and has a puncture near the start of a forty miles control, for which his maximum time is 2h. 10m. He may take an hour or more to remove the broken ring and mend his tyre, and he is left with forty miles to do in an hour or a little more. He takes a sporting chance, "blinds along all out," and gets in without loss of marks.

On the short control system of the A.C.U. he could not possibly escape loss of marks. The English system is, therefore, better calculated to exhibit the real performances of the machines, and to reduce public danger to the vanishing point. I fully sympathise with the wish underlying the Scottish policy, which is to enable men to catch up time after delay on the vile roads; but surely this desire could be better satisfied by using shorter controls and setting a lower speed for the villainous sections.

It is notorious that some of the medal winners in the Scottish trials encountered frightful trouble, but saved their marks by racing home over long control sections; this may be creditable to the riders in one sense, but it is highly undesirable in the public interests, and it is scarcely fair to those competitors who got through without any trouble at all.

The inter-club team race at Brooklands on the 29th ult. Prince Henry of Prussia, it will be noticed, is an interested spectator.

A SMART SIDECAR.

QUITE one of the smartest and most comfortable sidecars we have yet had the pleasure of inspecting is about to be placed upon the market by Mr. Graeme Fenton, whose address for the present is 219, Shaftesbury Avenue, London, W.C. As can be seen from the accompanying sketch 'of the complete car it is designed on quite original lines, yet there will, we think, be few to deny that, if only on the score of appearance, it possesses great advantages over the more generally accepted type. Following, as it does, upon the lines of a flush-sided torpedo motor car body, it is remarkably roomy and comfortable, and the position and arrangement of the seat gives the maximum

Fig. 1.—A newly-designed sidecar possessing several novel and useful features.

of freedom to the passenger. The car is made of cane, and has a door on the open side only, the other fixed side serving as an excellent means of excluding draughts, and preventing the likelihood of the basketwork "sagging"—as with hard use most basketwork does.

Another very admirable feature is that the passenger need not use a waterproof apron, as he, or she, is so largely protected by the roomy scuttle-shaped footpiece and the high side pieces. The apron is accordingly quite small, forming, as it were, only the lid of the basket, and this being so it can be attached and detached by the passenger himself. This point will be appreciated by users of sidecars in which it is necessary at every stop to get down and fumble with the apron straps below the basket in order to release the passenger. Still another point is that the apron is furnished with fasteners, so that when the storm-extension is not in

use it can be clipped down and thus prevented from flapping about in the wind.

The apron is also provided with a very large pocket. The whole of the interior of the basket is nicely upholstered.

It will be readily seen that the easy curving line of the basket bottom is a point which makes for the greatest reduction in wind resistance, and at the same time it should be particularly good in

Fig. 2.—The conveniently arranged cupboard fitted to the Wolbrook sidecar.

the prevention of dust raising. There is, however, an additional advantage, namely, that by using this shape a very convenient cupboard space is automatically provided beneath the passenger's seat, and is of sufficient size to stow away everything that is likely to be wanted. The cupboard is well out of the way, and being sprung there is no tendency for the spares, etc., to rattle. A sketch showing the accessibility of the cupboard is given in fig. 2.

As will be seen from fig. 1, the framework of the undercarriage is somewhat unusual, but we understand that baskets of the above type can be modified to fit existing undercarriages.

There is one point in the design of this sidecar which may have escaped notice, and that is the protection of the forepart against the percolation of water when driving in rain or snow. In the case of the ordinary sidecar the forepart is protected by a waterproof apron buttoning right over the front. The extremity, therefore, of the footpiece should, we think, be rendered waterproof so as to keep the feet of the passenger dry, and also to allow rain easily to run off.

The design is, like all other good things, the result of much thought and careful consideration and experiment. Without committing ourselves to too strong an opinion we must say that the "Wolbrook" (for that is its name) seems to have an excellent future.

A NEW DRIP FEED LUBRICATOR.

WE recently had the pleasure of examining a new drip feed lubricator which has just been placed upon the market by Best and Lloyd, Ltd., Cambay Works, Handsworth, Birmingham.

The device, a sketch of which is given alongside, is quite small, but thoroughly complete in every way, and we should say that it would meet with quite a good demand. It consists of two parts. The first on the left-hand side is a plain pump barrel of considerable diameter, which fits into the ordinary oil tank and is secured thereto in the usual manner. At the bottom of the pump is a filter through which the oil is drawn by the plunger when the handle is lifted. The plunger is backed by a strong spring, which forces the oil through the horizontal delivery pipe at the top end of the pump to the screw-down needle valve which controls its egress through the visible drip feed and thence to the engine.

The needle valve is operated by a milled thumbscrew, on the lower face of which is a ring of holes, which, with a small spring plunger, allows very small adjustments to be made and maintained. The drip-feed is open to sight all round so that its operation can very easily be observed. The needle valve with the drip-feed body is screwed to the pump body so that in the event of the latter being inclined, as it generally is, the drip-feed can still be arranged vertically. The feed can be adjusted in extremely small stages at anything between a few drops of oil a minute and a straight through flow. Thus, should the necessity arise for giving the engine a sudden large dose of oil, all that is required is to turn the needle valve thumbscrew a complete revolution when the oil jet will be opened to its fullest. Afterwards the screw can be turned back to the point at which it was previously adjusted.

Messrs. Best and Lloyd are also making a drip-feed lubricator for use with pumps that are placed outside the tank.

The new drip-feed lubricator, showing on the left the pump barrel, and on the right the needle valve.

TEAM PRIZE IN THE SIX DAYS' TRIALS

In connection with the Team Prize, to be awarded to a team of three machines entered or nominated by a trade representative in the A.C.U. Six Days' Trials, we are requested to point out that a manufacturer may nominate one private owner of his make of machine to complete his team. A private owner so nominated may, therefore, be eligible to compete for both team prizes; that is to say, he may be nominated by the manufacturer of his machine, and he may still be eligible to compete for his club in the team prize offered for the best performance by a team of three private owners nominated by an affiliated club.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All queries should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately for ease of reference. Letters containing legal queries should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Dripping Petrol.

? When I flood my carburetter the petrol immediately begins to drip very fast from underneath the vaporising chamber and I waste such a lot of petrol. Can it be that I have not put the vaporising chamber high enough or too high?—G.E.P.

The leak in question is entirely caused by petrol flowing out of the jet when you flood, owing to the increased height of the petrol level. So long as the petrol does not run out whilst the machine is running you are not wasting any more than any other machine does. In the event of it dripping out whilst you are running it would be well to examine the little fibre washers fitted to the actual jet itself and replace these in case of damage.

A Miscellany.

? (1.) How far can one drive a motor cycle on the level without stopping to cool engine?

(2.) I am about to leave my motor cycle unused for a couple of months. Should I inject some engine oil into compression taps before leaving? (3.) When coasting down a slight hill with exhaust lever raised, should I close throttle? (4.) Oil gets on my belt. It seems to come from the gear box. How should I prevent it? My machine is a two-speed Douglas.—E.J.D.

(1.) The distance a motor cycle can be driven on the level without stopping to cool the engine depends entirely on the design of the cylinder, the speed at which it is driven, and the conditions under which it is driven. Taking the average English day, it would be possible to drive the average $3\frac{1}{2}$ h.p. single-cylinder until the petrol ran out without the slightest signs of overheating, at a speed of not more than thirty miles an hour. (2.) There is no need to inject oil into the compression taps when leaving the machine, but all outside bright parts should be vaselined. (3.) It would be well to keep the throttle open when coasting downhill, as the engine can then get a certain quantity of cool air, which will help considerably in the internal cooling. (4.) With regard to the oil, it would be possible to have some sort of cover to protect the belt, but we should advise you to examine the gear box in question and see that it is not worn or that the outside cap has not become loose.

Running with Throttle Lever Closed.

? My machine is a 1911 standard $3\frac{1}{2}$ h.p. Singer with B. and B. carburetter and Bosch magneto. Once started I can entirely close gas lever, and even then can open air lever to its fullest extent, and with magneto lever midway I can travel between fifteen and twenty miles an hour on level. Coming through traffic it is almost impossible to travel at a slow speed, as I cannot throttle down at all, and if I retard the magneto more than a notch or two the machine stops. I invariably run on level with levers set as above, and yet petrol consumption is very high.—E.J.

We should imagine that the throttle connected to your handle-bar mechanism is either sticking or the wire has broken inside the casing. If this proves not to be the case, the jet is perhaps too large for the type of machine you are using. We do not think wrong timing would have very much to do with it, but if the inlet valve opens shortly after the

piston has started on its downward career and the exhaust valve closes exactly on the top of the exhaust stroke, all should be well in this direction.

Licences.

? I have applied for and received a new registration number, fee 5s., and have since then received a form for taking out a new licence. I thought the licence already taken out would do for the new motor cycle till December 31st. Will you inform me if this is the case, or must I pay another guinea this year?—A.B.

Unless you have already done so, you must cancel the registration for the machine you have sold, unless the number has been transferred either by you or the new owner. The local taxation licence (£1) entitles you to keep a motor cycle for twelve months from January 1st. It would be advisable for you to inform the local taxation authorities that you have either cancelled or transferred the registration of the old machine.

A group of competitors in the Scottish Trials at one of the controls.

Knocking.

? I shall be very grateful if you can explain the following: My $3\frac{1}{2}$ h.p. machine runs very well on the flat, but when it encounters a long pull or two steep hills in succession it always begins to knock badly, and no matter how I regulate the levers and spark the clanking increases until the engine stops dead. I believe the knocking is caused by overheating. The bicycle takes a good deal of air, and I always give it as much as it will take so that the mixture is not too rich. Do you think a fairly large jet would cause this overheating?—G.B.

We are of the opinion that the knocking in question is probably caused by your driving the machine up hill with an excessive amount of air. You will probably find that to close the air as the machine slows will have a beneficial effect on the hill-climbing powers. You do not say exactly what setting you have given to the ignition, but this should not be too much advanced, as you should have a certain range of retard beyond the extreme limit. It is also well to keep the plug points fairly close.

Collision with Push Bicycle.

? Recently, while riding down one of the main roads of Manchester on a twin Rex, with friend on carrier, on coming to a car crossing at Grey Mare Lane, there was a tramcar about to cross, and, sounding hooter, the driver pulled his car up. Just at that moment a push-cycle came round the car on the right-hand side of the car, and we collided, my machine knocking him down and damaging his machine, for which he asked 25s. 6d. for damage. Am I in fault?—T.A.

Our legal adviser writes: Your correspondent is not necessarily in fault or

liable to pay the damage, but it all depends upon the evidence the cyclist can prove against him. At what rate was your correspondent going? and at what rate was the cyclist going? Unless the cyclist can show that your correspondent was riding recklessly or negligently, no damages can be claimed. Of course, special care should have been taken under the circumstances, and unless your correspondent was going very slowly indeed, the judge would probably hold him liable.

LOST AND FOUND.

We receive many letters regarding accessories, etc., both "Lost and Found," which we are unable to find space for. As these particular matters are of interest to two persons only, viz., the finder and the loser, we have decided to keep a list of such articles, and all that are notified to us will be inserted in this list. Should we receive a letter from the finder which corresponds to the article lost, the two persons will be put into communication, but it must clearly be understood that we cannot enter into correspondence on the matter beyond this.

Hill-climbing with a Tricar.

? I have a tricar fitted with a M.M.C. engine (80 x 85), which I cannot get to take hills of any length or gradient, especially if the machine has been running five miles or more. New piston and rings have been fitted, and it has a good compression. Surface carburetter is used. Could I obtain more power with a jet carburetter, and if so could I combine the two, as I wish to retain the surface carburetter on account of its easy starting property?—J.A.B.

New pistons and rings are likely to give you less power until they have been run in, but undoubtedly you would obtain much greater satisfaction with a jet carburetter, so fitted and suitably tuned up to the size of the engine. The surface carburetter seldom gives a satisfactory mixture for any length of time, and is much inclined to vary with the weather conditions for all-round work. Starting with a jet carburetter is quite as easy; in fact, in some cases it is easier than with the surface carburetter. We should advise you also thoroughly to grind in both valves.

Overheating of a Tricar Engine.

? Early this year I bought a runabout chassis, to which I fitted a 6 h.p. J.A.P. twin a.i.v. engine, fitted with a Brown and Barlow carburetter and large Matchless silencer. It is a two-seater, has three wheels (weight of self and passenger 17 stones). It was fitted with a bonnet with an open front. The trouble from the very first was overheating, so I took off the bonnet; this slightly improved matters. I then thoroughly overhauled it, with no results. I then fitted a 12in. diameter fan, which very much improved matters. I can now get a fair turn of speed on the level, but cannot climb. When I get to a hill I go up half-way, turn round, run down with the exhaust open to cool the engine, and I can then roar up every hill I have come across. It is single-gear, and the higher I gear up the better it runs and the cooler it keeps. It is geared up 4 to 1, and at that will climb anything when cool. I have tried several makes of oil, have tried giving carburetter full air, half air, and no air, and it runs best with a little extra. Will you kindly advise me how to cure the trouble?—A.H.

You might perhaps get better results by using a particular type of lubricant which will stand exceptional heat, but, in any case, it looks as if the machine was considerably heavier than such an air-cooled engine of this size could be expected to pull up hills. A fan of the Sirocco type, together with a funnel through which to direct the air on to the exhaust port, would be almost certain greatly to improve the running. It would appear to be rather a question of overheating than of a new or altered carburetter. It would be as well to see that there is not too much clearance in the valve tappets, as this is a frequent cause of very bad overheating, and it would also be well to tune the carburetter up so that it takes considerably more air when running on the flat, and leave you a distinct range for hill-climbing. The compression might also be reduced as an experiment.

EXPERIENCES WANTED.

"A.J.M." (Walthamstow). 5.6 h.p. Clyno and sidecar; also 7 h.p. two-speed Indian and sidecar.

"F.K." (Carrickfergus). Fit-all two-speed gear on a Triumph. Does a gear fitted to engine shaft cause excessive wear of crank shaft bearing?

We should like to remind our readers that all queries must be accompanied by a stamped and addressed envelope.

Douglas rider coming up Gruinard Hill on the fourth day of the Scottish Trials.

Increasing Popularity of the **B.S.A.** Motor Bicycle

Now recognised as the most perfect machine on the road. Its distinctive finish, its silence, power, and smoothness of running are points that are fully appreciated by those who have ridden other makes. The many refinements and careful construction of the B.S.A. have made it not only the most comfortable and easiest-riding machine, but also the most reliable. Its chief constructional features include the aluminium Magneto Cover, special Spring Fork which is responsible for the absence of vibration on the handlebar, patent Gudgeon Pin to piston, B.S.A. Locking Screw to pedal, all of which are fully illustrated and described in the B.S.A. Catalogue, a copy of which will be sent free on request.

Mr. E. C. WAKE,
Polam Grange,
Darlington, writes:

"I have had several well-known makes of motor bicycles, but never one that satisfied me so much as the B.S.A. has done. The absence of vibration, and extreme flexibility of the machine has been the comment of many people who have seen it. It is a splendid hill climber and very fast. In fact, it is an ideal machine in every respect. I shall be glad to show it to anyone interested, and am sure if they want a really good machine, they cannot do better than buy a B.S.A."

WRITE FOR CATALOGUE NOW.

Birmingham.

The Editor does not hold himself responsible for the opinions of his correspondents.

Letters should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and should be accompanied by the writer's full name and address.

Offset Cylinders.

[5788].—In your comments upon the Humber light-weight engine you mention that this is the only British built engine set *désaxé*. May we correct this, for our small engine (our lightweight, which through stress of orders for the 3½ h.p. model is not yet ready for the market) is set *désaxé*, and likewise the Scott. This latter, we think, is the earliest motor cycle engine to be offset, Mr. Scott evidently realising the advantage for motor cycle engines earlier than anyone else.

—THE NORTON MANFG. CO., LTD.,

JAS. L. NORTON.

A Wonderful Sidecar Performance.

[5789].—I am a rider of a 2½ h.p. two-speed F.N., and note the wonderful performance of Mr. R. O. Clark with a sidecar and 12 stones passenger (July 27th, page 786). I have wondered if this little machine could take a passenger, and this success prompts me to ask if there were any hills on the 200 miles trial, also if the machine is any worse for the severe test. Again, would Mr. Clark say what type of sidecar is suited to this machine, and if most of the running on inclines had to be done on the second speed?

I hope I am not troubling too much, but I would be very pleased if Mr. Clark would let me have some further particulars. The passenger I purpose carrying is 10½ stones, while my weight is rather under. Our hills in the North are fairly stiff, but I would be quite satisfied to get up 1 in 12 or 15 on slow speed. Any information will be gladly welcomed.

F. N. BARROW.

The Vicious Dog.

[5790].—Seeing from time to time letters complaining of dangerous dogs and their attacks on motor cyclists, I should like to describe a plan I always find successful in circumventing them.

Firstly, procure a fairly stout walking stick of oak or ash, remove the ferrule, and insert a U-shaped staple. Next buy a slender dog chain, and divide it into three portions. Fix these on to the staple, in equal lengths (about twelve inches long). Then get one of those devices sold by accessory dealers for holding a walking stick, etc.; by means of a clip on the handle-bar and a socket clamped on to the front forks. Carry this stick and chains always. It can be taken out of its holder absolutely instantaneously, and when the dog comes alongside he can be given such a painful blow with one or all of the three dangling chains that he will be never at all likely to repeat his assaults.

The horrified surprise and rapid rout of all the dogs I have applied this treatment to has been most satisfactory and unfailing, so far as my own experience has gone, in all parts of the United Kingdom, and it has the recommendation that it does not in any way permanently injure them. If I come across a vicious or mischievous terrier or collie, the lesson I give him is never forgotten, and as the chains splay out it is really impossible for even a duffer to help hitting the creature somewhere or other.

CAVE CANEM.

Unbusinesslike Methods.

[5791].—One so often sees in your columns letters from readers who "have no interest other than that of a satisfied user" that I think it only fair that you should sometimes show up the other side of the question.

Let me give you an example. In April this year I bought a sidecar from a very well-known maker in the Midlands.

After about 500 miles running one of the tubes started to give way, and I therefore, on the 13th June, sent the frame

up to the makers for repair under their guarantee—a job which might have occupied half an hour.

On the 14th the makers replied that they would repair the defect and return the frame to me "at the earliest possible moment."

Nearly seven weeks have elapsed, but not a sign of the frame.

The makers do not reply to my letters or prepaid telegrams. Indeed, I have requested them to return my frame unrepaired, or in whatever state it may be in, but still with no result.

Now can this sort of thing be termed "businesslike"? Further, what possible end could the makers hope to attain by treating one of their clients in such a manner, as the free advertisement they have let themselves in for cannot be calculated to do them any good?

Perhaps if you would be so good as to publish this letter it might attract the makers' attention, as everything else has failed to do so.

BERNARD A. SUMNER.

R.I.A. and Warning Posts.

[5792].—With a view to obtaining the opinions of road users as to the comparative visibility by day and night of signposts painted in various ways, the Roads Improvement Association has erected five triangle posts (of which I enclose a photograph) at Tibbets Corner, at the top of West Hill, Wandsworth. Two of them are painted black and white, two red and white, and one entirely red. The secretary of the Association invites the opinions of motorists and others in the matter.

JOHN B. TWYXCROSS.

Five sample warning signs erected by the R.I.A. at Wandsworth. Motor cyclists who see them are requested to communicate with the R.I.A., Cexton House, Westminster, S.W., stating which they consider the easiest to discern by night and day.

Fitting Nail Catchers.

[5793.]-In reply to R. H. Adams, I have had nail catchers fitted to my machine for the last 4,000 miles, but have never found any damage done to my tyres through them. They are so effective in preventing punctures that it is surprising that all motor cyclists do not fit them.

Mine are made out of a pair of ordinary cyclists' trouser clips, heated and let cool to remove temper. They can then be bent to shape and placed between the mudguard and stays in the manner shown by rough sketch enclosed.

The cost of the clips at any cycle dealer's is 1½d., and they save many shillings in patches, besides time and trouble.

B. LEE SUTCLIFFE.

The Tune of the Lightweight.

[5794.]-In view of the suggestions recently made that the tune of a lightweight soon "falls off," it is interesting to note the "consistent lap" times made by the lightweight type in the Junior T.T. Race. As a rider of a Douglas (which, I am happy to say, does not give me any more trouble than my 3½ h.p.), it interested me much to note the consistent running of this make; although these little engines were obviously going all out (and a jolly good all out too) for the whole 150 miles, the variation in lap times was only a matter of seconds, and both riders who finished reported non-stop runs in respect of trouble.

Then there was Mr. Swift who made such a splendid six days' performance, taking different routes each day and looking after his own machine, not, as in the case of an effort made since, having a couple of assistants to do it. Beyond a belt fastener and new valve springs, oil and petrol bills, my machine has cost me nothing since I paid the makers on delivery, and I have just done 3,600 miles.

LAWRENCE H. REDDING.

Broken Piston Rings.

[5795.]-It would be interesting to know if any of the readers of *The Motor Cycle* have had similar experiences to mine. On removing the cylinder of my 4 h.p. engine lately I found all three piston rings broken, and the overlapping pieces of the step-cut ends had completely disappeared from each piston ring. The engine had been running well, and the cylinder was not scored nor was the piston injured. What I want to know is, where are the pieces? They cannot have got into the crank case, as there would not be room for them to pass down between the piston and cylinder; nor did the pieces fall down unnoticed while cylinder was being removed. The engine had run some 1,200 miles since the cylinder was last taken off. I might mention that the engine has done 2,800 miles without cleaning cylinder and piston, or touching the valves, and was quite free from any suspicion of knocking or overheating.

If anyone can suggest the fate of those six broken ends off the piston rings, I should be most interested.

S. H. CROW.

De Rosier's Parting Message.

[5796.]-I take great pleasure in writing a few lines to you before I depart for America.

In reference to the T.T. Race, I am not the kind of rider that generally makes excuses in regard to a race, because I do not believe in doing so; but since that event I have read in your journal accounts of the different excuses of the troubles experienced by some of the competitors, but it seemed to me that my real trouble was always left out.

The real reason for my not making such a good showing, and being amongst the "also rans," as someone puts it, was simply through my carelessness—which I admit—in not having my toolbag securely strapped up the way it should have been. On my first lap of the race you no doubt noticed that I was travelling pretty well amongst the leaders, but during that lap I lost all my spare parts

and tools out of my toolbag, which left me with nothing to repair the machine with.

When my trouble commenced, I could have fixed it in a very few seconds if I had had the parts and tools to do it with; but I was compelled to continue riding until I had my fall half a mile from Sulby Bridge, from where I was obliged to start on one cylinder and ride three miles into Ramsey. With my tools and an extra spark plug, I could have continued, and been amongst the leaders.

I noticed in an article in your paper some time ago one of your contributors described me as not much of a mechanic. It is pretty hard to be a mechanic in the position I was in with no tools. In order to continue in the race I had to borrow tools and spare parts at Ramsey to get my machine in running order. I did this after I knew that I was out of the winning position, and because I have never had the name of being a quitter. I knew very well that I was going to be disqualified.

I thank you very much for the way your paper has generally treated me since I have been in England, and I would like to say that the English motor cyclists are the best lot of sportsmen I have ever met.

JAKE DE ROSIER

Hill-climbing.

[5797.]-How is this for a hill, and this is only part of the sixteen miles?

W. C. Grange on his 500 c.c. Bradbury and self on a 3½ h.p. Matchless, single gears, are having great fun at the corners.

W. FAWCETT.

The Stelvio, a famous pass on the frontier of Austria and Italy mentioned in the letter from W. Fawcett. There are no less than eighty hairpin bends in a distance of seven miles. He does not say if he and his companion reached the summit.

The A.C.U. Six Days' Trials.

[5798.]-In your issue of the 3rd you omitted to asterisk my name in the list of entrants for the Six Days A.C.U. Trials, making me a trade rider, whereas I am a private owner. I am anxious for this to be corrected for obvious reasons.
R. C. OWEN-WELLS, B.A., Barrister.

Silence.

[5799.]-I was very interested in the latter part of Mr. H. G. Parke's letter *re* silencer and cut-out.

Personally, I dislike cut-outs, as their use brings discredit on motor cycles. Five years or so ago I had a cut-out (opening into the air) fitted to my 2½ h.p. Clément-Garrard. As a rule the machine climbed hills fairly well; with the cut-out open it would not look at an incline, much less a hill. An explanation as yet for this loss of power has not been forthcoming.
M.D., M.B.

The International Match—Special Racing Engines.

[5800.]-We have read with some interest Mr. Barnfather's letter in your issue of the 27th ult., relating to special racing engines. We feel we must, in reply, say that we have so far not considered it desirable or necessary to build a special racing engine.

It has been far more satisfactory to us, and, we believe, also to users of the J.A.P. engine, to see our standard productions used for all racing and competition work.

As soon as our standard engines are unable successfully to compete with special-engines of other makers, an exclusively racing engine will be forthcoming.

J. A. PRESTWICH AND CO.

The Six Days' Record.

[5801.]-You report in your issue of August 3rd further attempts at the six days' road record, and state that two riders maintained an average rate of 500 miles per day for two or three days.

Will no union or influential club make a public protest against this kind of thing? It is piteous in the extreme—the boys must be maniacs.
G.C.

[In cases of this kind all the governing body can do is to suspend the offenders if they are members, and if they are not, to refuse to allow them to compete in any competition held under the A.C.U. rules. This procedure is followed in every case.—Ed.]

Foreign Machines and British Riders.

[5802.]-Readers of your paper who have followed the correspondence on the above subject may be interested to know that the price of the T.T. Indian machine is alleged to be £200.

There must be something very far removed from standard about the machine to warrant the fixing of such a prohibitive price, and I am sure it would interest your readers generally if the makers could see their way to explain what it is.
CHAS. LAKE, A.M.I.Mech.E.

[Every manufacturer and dealer who enters a machine for the T.T. races must sign an undertaking to list and sell machines, conforming in every respect to a specification to be supplied to the A.C.U., for a period of six months following the date of the race. The T.T. Indian machines were originally priced at £200, but this was subsequently reduced to £90.—Ed.]

The Sidecar Record.

[5803.]-I notice in your issue of August 3rd, commenting on my recent sidecar record, that you state that I (Hugh Gibson) and my passenger, G. Wray, will probably be disqualified from taking part in the Six Days' Trial for exceeding the speed limit.

Now I could fill several columns of *The Motor Cycle* with arguments and reasons why I should not be suspended by the A.C.U., but as I know that space is precious, I will be brief, and will just repeat one or two paragraphs that I have taken from your columns. Reporting upon the Scottish Six Days' Trials, your correspondent says: "Here—for the first time in the trial—we had a chance to make up time, and 'Teetee-ing' was freely indulged in. I regret to say that more than one machine came near covering these fifteen miles in fifteen minutes. I even saw three riders with their heads down

doing a good forty-five miles per hour along the tramlines into the Aberdeen control. The secret history of many a gold medal for 'reliability' would be interesting reading, and a little T.T. experience comes in handy when one has pushed up a two miles hill."

Again: "... assembled crowd to a thrill, and tackling the hill at 40 m.p.h. hit a grid projecting 6in. from the roadway, over which his machine leapt a foot into the air, concluding with an S swerve, and a frightful conking under the very eyes of the Chief Constable."

And again: "... pin near Auchnasheen at high speed; he is badly cut about. Davies mended two punctures and took out his back wheel to fit his third cover since Monday, all without once being late."

I notice that one competitor, Mr. B. H. Davies, was dogged throughout the trial by tyre troubles. This rider was credited with mending numerous punctures and changing his back wheel and fitting three new covers without being once late at controls. As the schedule was worked out on a 20 m.p.h. basis, I leave readers to judge at what speed Mr. Davies (and other competitors) had to drive in order to reach the controls to time. Remember, there is the time lost in signing checking sheets, climbing (?) hills, taking in petrol, etc., in addition to roadside repairs, all of which has to be made up somehow.

Further on I note that Mr. B. H. Davies was awarded a gold medal. This is rather different treatment from what the A.C.U. is dealing out to Wray and myself.

Being barred from all A.C.U. events will not detract one iota from my pleasure in the sport of motor cycling. It is not the being suspended that I mind, so much as the inconsistent, Gilbertian attitude of the A.C.U. in suspending me for averaging 23 m.p.h. (or driving at 30 m.p.h. if you prefer to look at it in this way), when in the past (and certainly in the future) Six Days' Trials every competitor, and more particularly the official car and other observers, have driven, and will drive, most consistently at 30 m.p.h., and a bit over occasionally.

Of course, there is no A.C.U. fee attached to a record attempt, and probably this fact has more to do with the A.C.U.'s attitude than people think.

However, I must remember my promise to be brief, and in conclusion wish to say that I am not a spoil sport, and I sincerely wish the A.C.U. officials and competitors a jolly good time in Yorkshire—free from all police traps.

HUGH GIBSON.

Equipping the Sidecar.

[5804.]-We have read the article in the issue of August 3rd on the equipment of sidecars, and can fully endorse the writer's views with one exception.

In the first and second illustrations, wherein he suggests bending the telescopic arm, we would point out that this makes the arm considerably weaker, as not being in a straight line, it cannot carry a strain equal to that which an ordinary telescopic arm is capable of.

Regarding the position of the body. We beg to point out, that on our latest models we are now fitting dropped bearer bars, which give the body a drop of some 2in. to 5in. according to the type of bar which is used. Further, with the latest "C" springs, the front bearer is slightly raised, the two combining to give what, in our opinion, is the finest position a sidecar body can obtain.

We should also like to be permitted to point out, that we supply carriers, where desired, very similar to your illustration No. 5, with the exception that the opening is from the top and the box extends the full length of the vertical slope given to the body in this position.

MAUDE'S MOTOR MART.

SUMMARY OF CORRESPONDENCE.

Messrs. H. P. and V. C. Stafford-Badger wish to thank the unknown motor cyclists with the four-cylinder F.N. and sidecar who assisted them on the night of the 29th ult.

Will J. Seyfreid kindly note that he omitted to enclose his address when corresponding with Messrs. H. Taylor and Co., 21a, Store Street, Tottenham Court Road, W.?

G. Denham wishes to thank the unknown motor cyclist who rendered him assistance at King's Worthy, near Winchester, on the 20th ult.

[A number of letters are unavoidably held over until next week.—Ed.]

SPECIAL FEATURES.

HOLIDAY TOURS AND COMPETITIONS.
THE HISTORY OF A GOLD MEDAL.
THE SIX DAYS' RECORD.

Rear Reflex Lights.

It has been suggested that clubs associated to the R.A.C. and A.C.U. might arrange local demonstrations to show the practical utility of the rear reflex lights for the edification of county and local authorities, farmers' associations, and local cycling organisations, etc.

Reflex Lights Free to Cyclists.

Over 2,000 applications have been received by the A.A. and M.U. in response to the preliminary notice offering 10,000 reflex lights to cyclists. All future requests for these lights should be made to the A.A. and M.U., Central House, New Street, Birmingham. Notice will be given when the lights are ready for distribution.

Military Motor Cyclists.

The A.A. and M.U. is still open to receive applications from expert motor cyclists with first-class machines for duty in connection with the autumn manoeuvres. September 11th to 21st, as despatch riders to the 1st and 2nd Divisional Telegraph Companies Royal Engineers. Enquiries for the necessary application forms should be addressed to Mr. Alfred B. E. Cheeseman, Caxton House, Westminster, S.W.

Auto Cycle Union Notes.

T.T. CONDITIONS FOR 1912.—The question of engine sizes in the 1912 Tourist Trophy Race has been referred to a special Technical Sub-committee of the Auto Cycle Union.

SIX DAYS' TRIAL.—As was predicted in our issue of last week, the entries of Messrs. Hugh Gibson and G. Wray have been cancelled, in consequence of their contravention of the A.C.U. regulation governing unauthorised trials on the road in which the speed limit is exceeded.

The entries amount to eighty-one in all. Of these, thirty-four are from private owners and six are passenger machines. All or any of the following test hills may be observed, at the discretion of the officials: Monday—Wass Bank (morning) and Sutton Bank (afternoon). Tuesday—Arkengarth Dale (morning) and Scarth Nick (afternoon). Wednesday—Garrowby (morning) and Blue Bank (afternoon). Thursday—Greenhow (morning) and Kidstones Pass (afternoon). Friday—Heaton Woods (morning) and Brownstay Ridge (afternoon). Competitors will be given due notice as to the hills on which they will be observed. The offer of gold medals by *The Motor Cycle* for the best performances of private owners in the motor bicycle and passenger classes in the Six Days' Trials has been accepted with gratitude by the A.C.U.

The secretary has had to make two alterations in the list of luncheon places

in connection with the above trials. On Thursday lunch will be at the Commercial Hotel, Settle, and on Friday at Fell House Hotel, Burnsall.

THE MANUFACTURERS' UNION AND ENGINE SIZES.—The Motor Cycle Manufacturers' Union has written a letter to the A.C.U. asking that body to use its influence to limit the size of engines employed in competitions organised by affiliated clubs to 500 c.c. The A.C.U. considers that such a procedure would be inadvisable.

TIME TO LIGHT LAMPS.

August	10th	8.30 p.m.
"	12th	8.26 p.m.
"	14th	8.23 p.m.
"	16th	8.19 p.m.

NEXT YEAR'S T.T. REGULATIONS.—Immediately following our leaderette "Looking Ahead" on the T.T. races, comes the announcement that a joint meeting of the representatives of the Motor Cycle Manufacturers' Union and the Auto Cycle Union will shortly be called to discuss the sizes of engines to be used in next year's Tourist Trophy Race. The Standing Joint Committee will for this particular occasion be increased by three members a side. The extra names nominated by the A.C.U. are Messrs. Archibald Sharp, Otto Thomas, and W. G. McMinnies.

MEMBERSHIP.—One hundred and twenty members were elected at a recent meeting of the A.C.U. Committee.

AFFILIATION.—The Wolverhampton M.C.C. has become affiliated to the governing body.

The Mont Cenis Hill-climb.

The Mont Cenis Hill-climb, organised by the Società Sportiva di Torino, will take place on Sunday next. This year the maximum bore for lightweights has been extended to 290 c.c. In the second category for machines with a maximum capacity of 500 c.c. a maximum bore of 85 mm. has been fixed for single-cylinders.

N.W. LONDON TOUR IN FRANCE.

A Motor Cyclist's Successful Action.

A motor cyclist of Castleford (Yorks) was, at the Leeds Assizes, successful in recovering £130 from the Castleford Urban District Council for personal injuries sustained through riding into a heap of manure left in the road at night and unlighted.

Passenger Carrying—A Warning.

At the Selly Oak Police Court, near Birmingham, on Wednesday last week, Wm. Locke, of 79, Heeley Road, Bournbrook, was summoned for not having a visible identification plate on the back of a motor cycle, as required by the Registration Order, 1903. Inspector Kitchen saw the defendant riding along the Bristol Road with a friend on the carrier, and noticed that the latter's coat hid all but the last two numbers of the identification plate. Defendant said it was not done intentionally, and there was a number plate on the front. Supt. Chare said it was the first prosecution for that class of offence, but it was becoming a common practice for people to ride on the back of motor cycles, and it was brought more as a warning to other persons. Defendant was ordered to pay the costs.

Round the World on Motor Bicycles.

The Globe-girdlers, William Streiff and James Esler, the former on a $3\frac{1}{2}$ h.p. N.S.U., and the latter on an Indian, called at our Coventry offices one day last week on their way to London via Stratford-on-Avon and Oxford. Mr. Streiff told us that he found the roads from Dublin to Cork were not at all good, and were particularly bad near Limerick. They experienced a considerable amount of rain in Ireland, and crossing from Cork to Liverpool they toured through the Lake District, and were further troubled by heavy rain showers. After making a stay of three or four days in London they left for the Continent early this week, travelling via Dover and Calais. Their total mileage in Great Britain was about 1,500, and they informed us that they had experienced no machine troubles except punctures. Our readers may expect to hear of Mr. Streiff and his N.S.U. again very shortly, as he has promised to send us brief notes of his journeys.

Inter-club Meet and Gala at Brooklands.

The J.A.P. engine machine on which H. Hunter won *The Motor Cycle* cup in the short distance handicap on the 29th ult. was a 5 h.p. Bat.

Mont Ventoux Hill-climb.

The results of the Mont Ventoux hill-climb are: Class 1—1st, Aurus. Class 2—1st, Loubier (Regence); 2nd, X (Regence tandem); 3rd, Astruc (Peugeot). The fastest motor cycle time was 33m. 38s. by Loubier; the fastest car time being 19m. 45 $\frac{1}{2}$ s., made on a Grand Prix racing car. The length of the climb is 13 $\frac{1}{2}$ miles, and the total rise 5,541 feet. The Mont Ventoux is in the Basse Alps, and 259 miles north-east of Avignon.

Open Record-breaking Meeting.

Following their very successful July race meeting when the Collier-de Rosier matches were run, the British Motor Cycle Racing Club has arranged a highly attractive programme for August 26th. The principal event will be a one hour race for all classes of motor bicycles, and to encourage owners of the fastest machines to give of their best, the club will give five pound notes for new records in any of the five classes. Riders who prefer a trophy may select a cup to the same value. The other event is the second 1911 time trials for one kilometre, one mile, and five miles. Mr. C. R. Collier has been elected to fill a vacancy on the committee.

**THE NORTH-WEST LONDON M.C.C.
TOUR TO LYONS.****Military Motor Cyclists.**

Thirteen motor cycles bearing the registration E are attached to the military camp at Elan Valley, North Wales. These machines are used for despatch carrying. There are three regiments in camp from Lichfield and other parts.

Another Attempt on the Hour Record.

Lieutenant R. N. Stewart made a further attempt on the hour record on Saturday last, but was again unsuccessful. On his first attempt he was pulled up with valve trouble after one and a half laps, on his second attempt the belt came off at the start, and on his third attempt the belt fastener broke after he had covered eleven laps. His best three laps were made at an average of 60.92 miles per hour, but the average speed as a whole was hardly fast enough. The weather was dull, it rained at times, and a strong southerly wind was blowing.

Racing at the Aston Track.

The results of the race meeting at the Aston Track on the 2nd inst. were:

Event 1.—Two Miles Scratch Race: Heat 1: H. Colver ($2\frac{3}{4}$ h.p. Enfield). Heat 2: H. J. Woodgate ($2\frac{3}{4}$ h.p. Douglas). Heat 3: W. W. Douglas ($2\frac{3}{4}$ h.p. Douglas). Final: 1, H. Colver (gold medal); 2, W. W. Douglas (silver medal).

Event 2.—Half-hour Efficiency Race: 1, W. W. Douglas ($2\frac{3}{4}$ h.p. Douglas), special gold medal; 2, Jack Woodhouse ($2\frac{1}{2}$ h.p. Ivy-Precision), silver medal; 3, P. Brewster ($2\frac{3}{4}$ h.p. Forward).

Three Miles Handicap.—1, H. Colver ($2\frac{3}{4}$ h.p. Enfield), gold medal; 2, W. W. Douglas ($2\frac{3}{4}$ h.p. Douglas), silver medal.

Echo of the M.C.C. Team Trial.

At the quarterly meeting of the Oxfordshire County Council, Sir George Dashwood drew attention to a report in connection with motor cycle competitions on the public roads. On June 17th he pointed out that 116 motor bicycles started from Bicester and rode round a circuit four times. Alderman Colonel England said he thought that could hardly be called the legitimate use of the roads. Another enlightened member pointed out that it was equal to 600 motor cycles going over the roads. It was agreed to refer the matter to the Roads and Bridges Committee and see what power they had.

Stop for lunch at the Cafe Restaurant, Pont-de-Briques, hree miles out of Boulogne.

Machines being taken on board at Folkestone.

The two sidecar machines which went to Lyons in the N.W. London French tour about to embark at Folkestone

M.C.C. Standard Reliability, Hill-climbing, and Brake-testing Trials in Devon.

STARTING from the Bear Hotel, Hungerford, at eight o'clock on Saturday morning, the 5th inst., the above competition was successfully run off. Doubtless the novel nature of the competition and the exceedingly stiff course accounted for the small number of entrants, but this only gives greater credit to those who did compete. The entrants were:

1. E. Gwynne (7 Indian), single gear.
2. E. Pond (3½ Rudge), single gear.
3. W. Pratt (3½ P. and M.), two speeds.
4. Eli Clark (2½ Douglas), two speeds.
5. E. Kickham (2½ Douglas), two speeds.
6. H. A. Cooper (3½ T.T. Bradbury), single gear.
7. Stanley Webb (3½ Bradbury), single gear.
8. R. B. Clark (5 Indian), single gear.
9. P. H. Bentley (3½ Triumph), clutch.
10. C. T. Newsome (3½ Rover), three-speed gear.
11. Fred Taylor (7 Indian), clutch.
12. F. C. Wasley (2½ Douglas), two speeds.
13. Rex G. Mundy (3½ T.T. Triumph), single gear.
14. G. T. Gray (3½ Rudge), all-speed gear.
15. T. Silver (3½ Quadrant), single gear.
16. G. L. Fletcher (2½ Douglas), two speeds.
17. Frank Smith (5-6 Clyno and sc.), four speeds.

Of these, Newsome failed to start in consequence of non-delivery of his gear, and Silver was also an absentee.

The competition as originally formulated was to include timed hill-climbs on Porlock, Countisbury, and Barbrook Hills, but the timing on the two latter was abandoned in consequence of the bad surface. The brake tests were also left out on these two hills for the same reason. The standard performance, for which gold medals were awarded, consisted of completing the journey between Hungerford and Barnstaple in twelve hours, and the return journey in the same time, climbing all observed hills without dismounting, and coming through the brake test successfully.

The hill-climb was divided into three classes:

Class A. Bicycles with engines up to 340 c.c. and sidecars with engines up to 650 c.c. to climb the hill at a minimum speed of eight miles per hour.

Class B. Bicycles with engines (single-cylinder) up to 500 c.c. and (twin-cylinders) up to 650 c.c., and sidecar machines with engines above 650 c.c. to climb the hill at a minimum speed of twelve miles per hour.

Class C. Any other machine, to climb the hill at a minimum speed of 15 m.p.h.

How the Winner was Determined.

For the purpose of finding the winner of the first prize (sapphire and diamond tie pin presented by Mrs. Chas. Jarrott) and second prize (silver cup presented by Mr. H. E. Hull), marks were awarded in the hill-climb at the rate of five marks for every mile per hour in excess of the minimum. This gave each class of machine an equal chance of winning these prizes. Silver and bronze medals to be awarded at the discretion of the committee for all other riders outside the standard performance.

It should be noted that only six entrants used direct driven machines, and at least three of them are now sworn change-speed enthusiasts after their experience.

The quiet little town of Hungerford, on the Bath Road, was quite livened up by the arrival of a number of entrants in the early morning of Saturday, and quite a number turned out to see the competitors sent off at one minute intervals from eight o'clock onwards. Mr. R. H. Head (chairman of the committee) rode down from London in the early morning to act as starter.

All got away smartly, many doubtless thinking from the fine weather and the course that they were away on a pleasant holiday jaunt. That this was not so will be shown later. After leaving the Bath Road at Beckhampton for Devizes, a strong headwind was met, and this troubled some of the competitors, as they wished to save their engines for the hills. Dark clouds began to blow up, and near Radstock rain began, which continued all the way to Minehead. It was of such severity that nearly everyone was wet through. Bentley had the bad luck to get a front wheel

puncture near Radstock just as the rain started, and as he was not provided with overalls, got soaked through very soon. Later on Smith was strapping up a bad gash in the back tyre of his Clyno, and nearing Wells, Gwynne ran out of petrol. Karslake, who went through the run on a new 3½ h.p. Rover, to help the officials, provided him with the needful petrol. In Wells a number stopped for petrol, and Fletcher came in with Taylor on his carrier, who reported engine troubles with his Indian four miles outside, and at Barnstaple a telegram arrived to report that it was a broken piston. And then the rain came down in real earnest. Several competitors suffered misfiring, and Eli Clark skidded in some newly laid tar and got in a terrible mess. To add to his troubles the men with the tar brushes treated it as a huge joke, while several competitors scraped Clarke as clean as possible. Kickham and our photographer lost their way and went many miles off the course, arriving at Minehead very late. As an interval of one and three-quarter hours was allowed at Minehead, nearly all spent the time in drying their outer garments as the rain had stopped. Many altered their gears, and R. B. Clark changed the chain sprockets of his Indian to give a 6 to 1 gear. After luncheon a move was made for Porlock Hill, which is about six miles from Minehead. Several competitors had stops on the way there, evidently through imperfectly adjusted belts. Quite a number stopped in Porlock to have a final look over their machines and then proceeded to the start of the hill-climb in a farmyard near the bottom of the hill.

Porlock Hill-climb.

Mr. F. T. Bidlake was in charge of the timing at the foot and Mr. G. J. M. Walker at the top, two and a half miles distant. Porlock Hill does not call for much description, as it has been so often mentioned, but it is as well to remember that it is two and a half miles long, and rises over 1,200 feet in that distance. There are two very bad corners, with a quarter of a mile of 1 in 4½ between them, and several hundred yards of 1 in 5 to 1 in 7. To add to the difficulty of climbing the hill, the rain had made it greasy in places, and this was the cause of several failures. It is remarkable that only one of the competitors should succeed in making a clean ascent, and this honour fell to W. Pratt (3½ P. and M.) Gwynne, who was down as first to start, elected not to try, as he did not care to chance it with a single gear. Therefore Pond was first to start, and he ran alongside at the first corner, mounted later, and went out of sight round the second corner running again. Pratt came next, and, as previously stated, made a clean ascent. He was loudly applauded by the spectators on the first corner, and well deserved it, as he came round with excellent judgment, and went out of sight in a straight course. Eli Clark assisted from the first corner to the second, and then his machine sideslipped. He remounted and finished the hill. Kickham took the corner well, but had to dig with his feet to keep going. When last seen he was still doing so, and later reported a traffic stop from a restive horse some distance up. H. A. Cooper ran after rounding the first corner, and soon stopped. Stanley Webb stopped on the corner through getting into a rut. R. B. Clark on the Indian used his clutch on the corner, and stopped immediately afterwards. P. H. Bentley was coming up well when his clutch started slipping, and he came to a standstill just round the corner. Rex Mundy was the only rider with a single gear to remain in the saddle. His performance was very fine, and well deserving of the applause he got. He was also quite the fastest. Wasley pedalled round the corner, and failed one hundred yards higher up from misfiring. Gray on the six-speeder came up too fast, and fell on the corner. His performance was quite a sensational one, and had he not been travelling too fast would undoubtedly have scored a clean ascent, as he did so later on. Fletcher was the only one to take the outside at the corner. He got round all right, but had to run and mount in stretches, and so doing went out of sight. Smith on the Clyno travelled slowly, as his back wheel would not grip, but he put up a marvellous performance, and only pulled up after climbing the worst portion because his rear tyre refused to bite. He started again, however, and finished.

M.C.C. Reliability, Hill-climbing, and Brake-testing Trial.

Smith is said to be the first sidecarist to get beyond the first bend, and would undoubtedly have made a clean ascent at the first attempt on a dry day. Several of those who failed made the ascent in short stretches, while others preferred to use the toll road, which is longer, but much easier.

Descent of Barbrook Hill.

Passing on over Exmoor, through marvellously beautiful scenery, the precipitous descent into Lynmouth had to be taken, and as it was very muddy several competitors had quite an exciting time. The Watersmeet Road was then followed for about three miles, and over the ridge to the top of Barbrook Mill Hill. Practically no one rode down without assistance from a crowd of small boys, who netted a small fortune by hanging on to the back of the machines. Be it said that Karslake's Rover was the only machine to get down without assistance, but perhaps this was because he knew the hill. Many of the riders thought of having to ride up this acclivity on the Monday, but they were saved this, as will be shown later. After the hill, a left-hand turn is taken for Parracombe, and after climbing for a mile or more there is a sharp corner with a steep pitch of about 1 in 8. To show how competitors take a hill like this on the run, it is interesting to note that Bentley used his clutch after getting round the corner and stopped. He restarted and finished pedalling. Pond ran after rounding the corner and remounted. Cooper made a clean ascent, although somewhat slow, as did Stanley Webb. Wasley used his low gear and pedalled. Gwynne was slow on the corner, but finished fast. Mundy ran part way and remounted, but ran again near the top. The course then went down into Parracombe and on to Blackmore Gate, where the main road was left to go across to Barnstaple. The headquarters were at the Imperial Hotel, and with an excellent garage the competitors did remarkably well. The hotel people were very kind in drying our clothes and making us comfortable, and with a good hot dinner quickly served everyone was soon in the best of spirits. Many were the remarks about the vile condition of the roads. Several confessed they had thought of the run as a picnic, but lived to realise what real hills are. After a general exchange of opinions it was decided to hold a meeting on Sunday morning, as it was considered that Barbrook Hill was quite impracticable in its muddy condition. At the meeting an alternative route was suggested *via* Watersmeet, Brendon, and Oare, and so to the top of Porlock Hill, but a majority were for going straight down Lynmouth Hill and trying Countisbury Hill as an observed climb. They would then proceed to Porlock Hill for the brake test. It was also decided to alter the starting time from 8.30 to 8 o'clock, to allow more time for the twisty road to Parracombe. It should be clearly understood that it was impossible for the officials to foresee all the difficulties of the route, as it was over entirely new ground for competitions. Even with a liberal allowance of time many competitors were unable to keep to the schedule on the outward journey over the hills.

Observed Climb on Countisbury Hill.

On Monday morning the competitors were sent off by Mr. Gwynne, who followed afterwards. As the hill-climb on Barbrook Hill was cancelled, competitors rode past the foot and straight into Lynmouth for the observed climb of Countisbury. As the surface had dried somewhat it was quite rideable, and all but two made a clean ascent. Observations above the Tors Hotel Garage were that Pratt was quite fast on low gear. Eli Clark came up steadily, Bentley fast, and Pond ran and stopped. Karslake gave him a push off, and he got away all right. Pond now thinks a change-speed gear absolutely necessary for North Devon. H. A. Cooper was fairly fast, as was Stanley Webb. R. B. Clark was quite fast, but geared low. Kickham came up steadily, as did Wasley. Smith, on the Clyno, came up in his invincible style, looking quite pleased. Gray was going well on one of his low gears. Fletcher was very slow, as his belt had turned over and was slipping, and he stopped to tighten it after the steepest part. Mundy was not observed, as he arrived late in consequence of losing his way.

Competitors proceeded straight on to the top of Porlock Hill for the brake test, and here we found H. G. Bell, Southcomb May, and F. Russell to greet their fellow members. For the brake test a strip 20ft. wide was marked off with apes, and each man had to come to a standstill between

them. The gradient was 1 in 8. Gwynne and Pond came down slowly and stopped satisfactorily. Pratt was fast and made a very quick stop. Eli Clark and Kickham were slow and stopped. Cooper came at a fair speed and stopped. S. Webb and R. B. Clark were slow and stopped, and the latter's brakes squeaked. Bentley was slow and stopped, and was baulked by the Lorna Doone coach which met him in the test strip. Wasley skidded his back wheel and stopped, as did Mundy. Gray was very fast and skidded his back wheel, and only just stopped inside the tape. Fletcher was also fast, and skated into the measured piece from some distance. Smith was very slow and stopped satisfactorily.

It is curious to note that up till now, although the route was over most difficult country, only one competitor had dropped out. Proceeding to Minehead for lunch, the competitors left for the easy run to the finish at Hungerford. The lovely scenery was greatly enjoyed by all, and the weather conditions being ideal, there was every prospect of a successful termination to the trial. Porlock Hill was in ideal condition, and was in distinct contrast from Saturday, when it was so greasy in places. The only incident on the return to Hungerford was Gwynne breaking the inlet rocker of the front cylinder. All who started completed the trial, with the exception of Fred Taylor, whose retirement is recorded earlier. Although the course is over some of the roughest roads in England, it is remarkable that there was only one punctured tyre. A feature of the trial was the remarkable running of the little Douglasses. Several climbed Countisbury Hill without their riders pedalling or dismounting. The Clyno sidecar also put up a very fine performance, and is the first sidecar to make the ascent of Porlock Hill with a passenger. Smith had no trouble with the machine throughout, and climbed all hills with a reserve of power. It should be noted that this is the first competition in North Devon, and includes the first timed hill-climb on Porlock Hill.

The provisional result.

Subject to confirmation by the committee, W. Pratt wins the first prize, as he was the only one to qualify by making a clean ascent of Porlock Hill. He thinks the trial an excellent one, and of the kind which has been wanted for years. All the competitors would certainly go another year, but several single gear enthusiasts would now only go with a change-speed gear.

Thanks are due to Mr. Bordsall, of Exeter, for going to Barnstaple to check the men in, and also to Mr. J. K. Starley for the official car (12 h.p. Silent Knight Rover), ably driven by Mr. A. H. Marsh.

Flashlight photograph of the start of H. V. Swift's attempt to break the six days' long distance record for lightweight motor cycles. Our photograph was taken on Saturday midnight outside the General Post Office, Sheffield. His mount is a 2½ h.p. Douglas.

SIX DAYS' RECORD BEATEN.

J. Guzzwell, of Grimsby, averages 467 miles per day.

AS mentioned in our last issue, J. Guzzwell, of Grimsby, started on Saturday, July 29th, on an attempt to improve on the six days' figures set up by W. J. Clarke, of Doncaster. Guzzwell brought his machine to our offices previous to the start and asked us to seal the engine to the frame. Signed postcards were received daily at our offices, giving the distances registered by the Cowey speedometer. This instrument was new at the commencement of the ride, and had been tested for the occasion. The mileages were reckoned from Gall and Inglis's Contour Road Book. Each postcard, in addition to the above particulars, was signed with the name, and in nearly all cases with the name and address of the checker. A wire handed in at Grimsby on Friday morning last reads as follows: "Finished ride midnight, 2,801 miles.—Guzzwell." The

The new six days' record holder, J. Guzzwell (free engine Triumph), who rode the unprecedented distance of 2,801 miles.

previous best, viz., Clarke's ride, was 2,700 miles, accomplished between June 6th and 11th. Guzzwell's daily rides and distances are as follows:

July 29th.—Grimsby, Nottingham, Barton, Bourne, Lincoln, Brigg, Grimsby, Lincoln, Bourne, Barton, Sleaford, Brigg, and back to Grimsby. Distance by road book 553 miles, by speedometer 556 miles.

July 30th.—Grimsby, Nottingham, Barton, Bourne, Brigg, Bourne, Brigg, Grimsby. Distance by road book 411 miles, by speedometer 415 miles.

July 31st.—Grimsby, Nottingham, Brigg, Grimsby, Nottingham, Coventry, Newark, Grimsby. Distance by road book 404, by speedometer 405 miles.

August 1st.—Grimsby, Nottingham, Brigg, Bourne, Brigg, Bourne, Brigg, Nottingham, Lincoln. Distance by road book 469, by speedometer 472 miles.

August 2nd.—Lincoln, Nottingham, Lincoln, Nottingham, Grimsby, Brigg, Nottingham, Brigg, Lincoln, Brigg, Nottingham, Brigg, Lincoln, Brigg, Nottingham. Distance by road book 435½, by speedometer 423 miles.

August 3rd.—Nottingham, Brigg, Nottingham, Brigg, Lincoln, Brigg, Lincoln, Brigg, Lincoln, Brigg, Lincoln, Brigg, Grimsby, Brigg, Lincoln, Brigg, Lincoln, Brigg,

Lincoln, Grimsby. Distance by road book 529, by speedometer 530 miles.

The rider finished at 11.55 p.m. Guzzwell rode his 3½ h.p. 1910 Triumph fitted with Kempshall tyres, Stanley-Dermatine belt, L.M. plugs, Lucas lamp and generator, and XL'All pan seat. Pratt's spirit and Moberg oil were used.

From the reports received Guzzwell finished in excellent form, but was sunburnt and weatherbeaten. In addition to checking by means of the postcards sent to these offices, Guzzwell has duplicates of all the signatures obtained written in a book corresponding to the cards received by us. In taking the distance from the Contour Road Book odd furlongs have been omitted, which will account for the slight discrepancy between the road book distances and the distances registered by the speedometer.

In the course of an interview on the day following the completion of the ride, Guzzwell, who is of powerful physique, and showed little signs of exhaustion, said the only thing that had affected him was that he wondered why he could not hear the throb of the engine, and everything seemed strangely quiet.

He had two spills. On the Monday morning he buckled the back wheel; and, although able to ride from Lincoln to Grimsby, he had to have a new wheel of the fixed engine variety fitted until he could get to Coventry, where a free-engine wheel was replaced. He estimates that he lost from seven to nine hours owing to this, and that it spoilt what chance he may have had of making a 500 miles a day average.

On the Wednesday night, on the road to Grimsby from Lincoln, he was forced on to the kerb by a motor car, with the result that he had a spill, and bent the control rods of the free-engine clutch. This was put right, however, the same night at Lincoln.

On the Bishop Bridge Road, in the neighbourhood of Market Rasen, an extraordinary thing happened. Riding at night a number of hares and rabbits were attracted by the lamp, and a hare running under the engine just scraped the belt. Light as its touch must have been, it was sufficient to remove the belt.

The most trying part of the ride, however, was on the Thursday morning, when there was a good deal of rain. "I was an hour and a half doing the first twenty-four miles," said Guzzwell, "and I was wet through into the bargain on arriving at Lincoln. But I had to let my clothes dry on me, for I had no spare ones with me."

There were a good many police-traps, which he managed to dodge, and only once was he challenged by policemen, that being on the Newark Road from Lincoln. "Then," as he put it, "I was in too much of a hurry to stop."

Asked for some details as to how he managed about sleep, Guzzwell estimated that he only had eleven hours' rest in the six days. He rode practically continuously for forty-eight hours during the later stages of his run, and on no occasion did he rest more than four hours at one stretch.

With regard to food, "I took a meal when I had the chance," he said. "Generally speaking, meals were not ready when I wanted them, and I could not afford to lose the time to wait for them. During the last three days I existed chiefly on milk and Brand's meat extract lozenges, which I found quite sufficient, for I had no desire for a hearty meal. The only liquid refreshment I touched was milk, which was both food and drink."

A. W. Brittain Retires through Collision with a Dog.

A. W. Brittain did not retire at 1,205 miles on Tuesday of last week, although his telegram led us to believe that he had done so. He continued the ride, and on the 30th he had a very good day and touched absolutely nothing on the machine; but on the 31st he broke three belts in the first fifteen miles, and ran out of petrol near Fenstanton, but managed to get to a petrol store by using the spare petrol behind the dam in the Rudge tank. Subsequently he had trouble with the rear wheel spokes, had two punctures and five broken belts, and on the 1st inst. five punctures between Leicester and Cambridge, although he started on a brand new cover. The attempt was brought to an end by colliding with a dog when travelling at only eight miles an hour.

DE ROSIER'S LAST DAYS IN ENGLAND.

JAKE DE ROSIER succeeded in annexing two records before leaving England last Saturday. Starting in the early hours of Friday morning, and using his famous 7 h.p. No. 21 Indian, he covered the flying kilometre in 25½s., which equals a speed of 88.77 miles an hour, and thus beat the late M. Cissac's record, which he attained on a 12 h.p. Peugeot motor cycle at Blackpool in 1905, covering the distance in 25½s. The mile was covered in 40½s., which means 88.23 miles an hour, thus beating his attempt on July 8th on the occasion of the M.C.C. race meeting, when he covered the distance in 41½s., and beating his record at Los Angeles. It was a fine morning, with a side wind, and de Rosier elected to ride down the railway straight towards the members' bridge. He stated that he felt the bumps very much, and on one occasion he was thrown right off the saddle and came down with a crash, hurting himself severely, so that he wondered for the moment if he could steady himself again. Two tries were made for each event, the time-keepers being Messrs. A. V. Ebbelwhite and F. T. Bidlake.

On the same evening de Rosier was entertained at a farewell dinner at Frascati's restaurant by Mr. H. Collier, sen., at which were present Messrs. C. R. and H. A. Collier, Mr. Turner (Mr. Collier's partner), and Mr. E. M. P. Boileau (*The Motor Cycle*). This was an exceedingly sporting action on the part of Mr. Collier, which will be appreciated. De Rosier, who looked in much better health than when he first arrived in England, treasured most among his numerous trophies the M.C.C. special gold medal, which was awarded to him on the occasion of his victories of July 8th. C. R. Collier is anxious to go to America to try his luck, but has not made any definite arrangements, especially as interesting developments may be expected of Matchless Motors, Ltd., shortly. One thing has impressed itself on de Rosier, and that is that Englishmen are true sportsmen and play the game, and this is the greatest compliment he could pay us as a nation. De Rosier has proved himself to be a good exponent of a good machine during his sojourn in England, and it was with great regret we said good-bye to him.

GRUINARD HILL AND ITS CHARMING ENVIRONMENTS.

Some idea of the magnificent scenery passed through by the Scottish Trials competitors will be gathered from this illustration, showing H. V. Colver nearing the summit of Gruinard Hill on his two-speed Enfield.

THE SIX DAYS' LIGHTWEIGHT RECORD.

With the intention of reclaiming the lightweight six days' record H. V. Swift (2½ h.p. Douglas) started from Sheffield on Saturday at midnight, accompanied for the first part of his journey by J. Haslam, of the Sheffield and Hallamshire

M.C.C. His destination was Bangor to Sleaford, the total mileage for the first day being 500 miles. He is being checked by the officials of the Sheffield and Hallamshire M.C.C. (See page 829.)

BANK HOLIDAY RACING AT BROOKLANDS.

The last race meeting of the summer season has seldom provided such excellent sport as that which was seen last Monday. It is to be regretted that only one motor cycle event formed part of the programme, and that this event should have obtained only fifteen entries. However, an excellent race resulted in Stanhope Spencer (3½ h.p. Rudge) leading the field home, pursued by A. J. Spreston on a similar machine, and Haswell's Triumph finished third, well up to

the second man. Wasling, on an Enfield, received 2m. 8s. start, and although travelling well, was overtaken in the second lap, and had no chance at the finish. The Colliers' handicap prevented them from picking up the others in the 5½ miles, but during that time C. R. Collier had passed all but four of the field, and needed but another mile or so to have accomplished his object. Beyond the first four men the handicapping was excellent.

Herts. County A.C. Holiday Tour to the English Lakes.

THAT enterprising body, the Motor Cycle Section of the above club, held its second annual holiday tour and competition run to Kendal and back on August 5th to 7th. This tour is considered one of the most sporting and enjoyable runs of the year, and although the distance is, roughly, six hundred miles, it is not an arduous undertaking, there being no secret checks or irksome regulations.

The awards in connection with the run are unusually valuable, and great keenness is displayed by the competitors. Following is a list of the prizes: The Triumph Challenge Cup for single-cylinder machines; won last year by Bert Yates. The Indian Challenge Bowl for twin-cylinders; won

exercised on entering Biggleswade, where the roads had been taken up for drain laying.

After climbing Alconbury we encountered G. S. Carter struggling with his back tyre, and further on V. Wilberforce was in like distress. Hereafter the roads improved. At Stamford breakfast was provided, and as we were leaving the George Hotel W. W. Douglas arrived, and told us he had taken his back tube out no fewer than four times between Hertford and Stamford. (A curious point about this is before starting on the run W. W. mentioned in a casual way he had not suffered from punctures all the season.) Surely they must have all come together! Sympathising with him we proceeded along through the most uninteresting part of the run to Grantham, where Harwood was delayed again with a stretched exhaust valve, and Dixon who was complaining of a cracked valve seating on his Rudge. As this part of the route presents no terrors in the way of nasty twists or hills, they most instinctively opened their throttles. Approaching Newark, Cyril Patterson was passed repairing his front tyre.

Whilst waiting to go into the Doncaster check, which was situated one mile from the racecourse garage, Down passed carrying the chain cover under his arm, and reported the sprocket chain wheel had come adrift some miles farther back. He was travelling splendidly, and the lovely purr of the Enfield brought forth much admiration from his fellow competitors.

Lunch was taken at the Earl of Doncaster Arms, and everyone had come through successfully so far. At Wetherby we encountered the first storm, and adjustment of belts ensued.

Harrogate check was in charge of H. W. Fortune, who is always ready to give a helping hand to the Herts County A.C. After a most excellent tea at the Clarendon Hotel, we wended our way to Blubberhouses Pass, where the first hill-climb took place. The timing arrangements were in the hands of Messrs. Fortune and Tindall, who worked most energetically throughout the climb.

The Hill-climb at Blubberhouses.

Taking into consideration the severity of the weather, which had by now become a regular cloud burst, "a characteristic of this range of hills," some wonderful times were observed. Stanley Carter (Matchless twin) came up well,

W. W. Douglas (Douglas), E. A. Colliver (Zenith), and R. M. Mariani (P. & M.), the first arrivals at Harrogate.

by G. S. Carter. The Douglas Lightweight Cup; first year. The Humber five-guinea gold medal for passenger machines; first year. A pair of Kempshall tyres, given by Kempshalls. Silver cups are given at discretion of committee, and bronze medals, for completion of both journeys within one hour of respective schedule times.

The list of Competitors.

The route taken followed the North Road to Wetherby, where the road veered to the left for Harrogate, then on to Blubberhouses Pass (where the first hill-climb took place), thence to Settle, Kirkby Lonsdale, and Oxenholme (where the second hill-climb was arranged), and lastly Kendal.

Below is a list of the starters:

C. C. Cooke (3½ T.T. Triumph)	A. Peppercorn (3½ Bradbury)
R. M. Mariani (2½ P. and M.)	W. Cooper (3½ Bradbury)
B. T. Rice Pyle (8 Bat-Jap and sc.)	Alan Hill (3½ Rudge and sc.)
C. M. Down (2½ Royal Enfield, two-speed).	E. A. Colliver (3½ Zenith)
A. N. Gutteridge (3½ Clutch-Triumph)	W. W. Douglas (2½ Douglas, two-speed)
G. S. Carter (5 Matchless)	A. J. Dixon (3½ Rudge)
J. S. Harwood (3½ Humber and sc.)	C. Patterson (7 Indian and sc.)
	V. Wilberforce (2½ N.L.G.)
	P. Phillips (2½ Douglas, two speed)

Soon after 5 a.m. on Saturday Gray's garage was the scene of great activity as the competitors arrived to be weighed and prepare for the start of their long journey.

The weather was somewhat dull and cloudy, but everyone was in good spirits.

A. J. Peppercorn (3½ h.p. Bradbury) was the first to stop, suffering with carburettor trouble, but was soon going again. Reaching the top of Digswell we were given a very hearty cheer by some members of the club who had ridden over to witness the start. After leaving Baldock J. S. Harwood was held up with a sooted plug. Continuing along this popular road, which is now very loose and dusty, great caution was

W. Cooper (3½ h.p. Bradbury) and J. S. Harwood (3½ h.p. two-speed Humber and sidecar) arriving at Harrogate in pouring rain.

Herts County A.C. Holiday Tours.

followed by C. C. Cooke (T.T. Triumph), who was tremendously fast, and in order to save himself was obliged to run over the grass right past the timekeepers. Others to make creditable ascents were E. A. Colliver (Zenith) and W. Cooper (Bradbury), who had great difficulty in starting owing to a slipping belt. Alan Hill (3½ h.p. Rudge and sidecar) came up well, and J. S. Harwood (3½ h.p. Humber and sidecar) made an excellent climb.

Proceeding after the climb, G. S. Carter was seen busily occupied in adjusting his magneto, and just as we were approaching Settle R. M. Marians (2½ h.p. lightweight P. and M.) was unfortunately in trouble with his magneto. The ever energetic and hard-working hon. secretary, C. C. Cooke, experienced a loose pulley hereabouts.

Kirkby Lonsdale was the scene of the second control, and several of the riders were caught napping.

The Second Hill-climb.

Leaving Kirkby Lonsdale, a beautifully graded surface was experienced to Oxenholme, where the second and final hill-climb was awaiting the arrival of competitors. Several of the riders went astray before the hill, and reached Kendal before time, and had to return to be timed up the test hill.

Every starter reached Kendal, where a great crowd was waiting our arrival. The arrangements at the Commercial Hotel were excellent, and the general comment of all was that this tour has been "the" tour and competition of the year.

Sunday opened with a deluge of rain, but, in spite of this, at 11 a.m. machines were out, and all started for Barnard Castle, the majority by Keswick and Penrith, and a few by Shap Fell. Before starting not a single oil-skin or sou'-wester could be obtained for gold, owing to the heavy down-pour. It was pleasing to note the happy feeling that existed amongst the competitors. The scenery to-day was the best so far—in fact, magnificent—and although the roads were in better condition after the rain, they were quite severe. The stiff gradients saw many of the riders "conk" out.

Tea was taken at the George Hotel, Penrith, and rain was still falling when we arrived. After drying several of our garments at the hotel fire, we proceeded to Barnard Castle. The only incidents of note to-day were that A. G. Peppercorn, after leaving Kendal, in trying to negotiate a twisty bend, struck the wall and came a bad cropper—a hard piece of luck. Another competitor, Cyril Patterson (7 h.p. Indian and sidecar), unfortunately broke a chain and suffered a few other minor mishaps. Considering he had never driven a sidecar before, and only took delivery two days previous to the run, he performed excellently.

	Doncaster checks.	Kirkby Lonsdale.

The Return Journey on Monday.

Everyone was astir by 5 a.m. getting machines ready for the return journey. The weather conditions were certainly much brighter than Sunday, although rather dull.

F. G. Carter despatched the hon. secretary first at 6 a.m., other competitors following at one minute intervals.

The roads were in a deplorable state as far as Scotch Corner and atrocious as far as Greta Bridge.

Approaching the toll-gate several nasty skids were noticed, Down missing the wall by inches. Alan Hill was passed tyre repairing.

Joining the Great North Road at Scotch Corner, a very strong wind had sprung up, catching us sideways. Ideal weather conditions now prevailed, the sun shining magnificently, and roads were perfect to Aberford. Light refreshment was taken here. While refreshing the inner man, several members of the Doncaster Motor Cycle Club passed. They were holding a reliability trial, and greetings were exchanged on to Ferrybridge. Hill had now run out of petrol, and called at a wayside cottage for paraffin, and ran to Doncaster before replenishing.

HERTS COUNTY A.C. TOUR TO THE LAKE DISTRICT—NEARING RETFORD.

In the photograph may be recognised W. Cooper (Bradbury), C. C. Cooke (Triumph), and E. A. Colliver (Zenith).

Several further mishaps have to be recorded. Near Bawtry W. W. Douglas met with engine troubles, and had to be towed to the station by a non-competitor, and later W. Cooper (Bradbury) had the magneto cradle break.

A Check at Newark and a Trap at Grantham.

The first check was two miles from Newark. Clinton Arms, Newark, was the stopping place for the midday meal. The absentees were Rice Pyle (Bat and sidecar), W. W. Douglas, and H. G. Cove, the official judge.

After lunch we were all advised to drive with great caution through the village of Long Bennington, where the famous four-mile trap was being worked. Cyril Patterson (7 h.p. Indian and sidecar) was the next unfortunate, being hung up with a seized gear box, but he got going again later. Several stayed at Norman's Cross for tea, and Dr. Moss Blundell had driven over from Huntingdon to meet the competitors.

The last check was two miles from Hatfield, and the majority were well prepared for it.

Among the lightweights, the P. and M., Enfield, and Phillips's Douglas have made excellent performances, and the same may be said of Cooke's Triumph, Colliver's Zenith, and Harwood's Humber.

The results are not yet available, but, judging by the running, Colliver should win the Triumph Cup, G. S. Carter the Indian Bowl, and Down or Phillips the Douglas Cup.

FOR THE HOLIDAY SEASON

use the

Humber

2 h.p. Lightweight.

If you play Golf, Tennis, or Cricket, this handy little mount is indispensable. It weighs under 100 lbs., is every bit as useful as the heavier machines, and will carry you to your destination with absolute certainty. It has recently secured

GOLD MEDALS

in the following events:

- July 5th. Scarboro' Motor Cycle Club's Hill Climb.
- „ 13th. Doncaster & Dist. Motor Cycling Club's Hill Climb.
- „ 15th. Mersey Motor Club's 24-hour Reliability Trials.
- „ 17th. Western Dist. Motor Club (London) Hill Climb.

In answering this advertisement it is desirable to mention "The Motor Cycle."

The N.W. London M.C.C. Tour to Lyons.

A British rider and machine win the 180 kilometres race.

THE party having closed up at Abbeville during the early morning of July 30th, we got away in group order on our journey South, the weather being perfect and the road, on the whole, first class. The approach to Neufchâtel, which lies in a valley, provided a splendid specimen of road engineering, the long climb out of the town being equally well graded and the scenery very good. Some of us took a breather here, and sipped the coffee, which is a revelation to the uninitiated, while *The Motor Cycle* photographer took a snap.

A party of N.W. London M.C.C. members during their tour to Lyons.

Beyond Neufchâtel to Rouen the road is not so good, and some of the *paré* brought on a general idea that one's machine might go to pieces at any moment. After a time, however, that feeling wore off, and confidence born of sitting over English workmanship returned. Careful diving over *paré* was, however, always necessary, especially with the sidecars.

A long drop into Rouen found us struggling with a big dose of *paré* and trams, the Seine being close on our right for some time, until we crossed it at Pont de l'Arche, where we found a fair in full swing. One found it difficult to realise that it was Sunday, and we stayed awhile watching the novel scene, and being instantly diagnosed as "les Anglais," before pushing our machines through the crowd and making, *via* Louviers, for Evreux, where we slept. Two miles outside the town I had trouble with my back tyre, which delayed me some time, but dinner in France seems to be always done to a turn whenever one arrives, so the set-back was soon forgotten.

Monday morning saw us off immediately after *petit déjeuner*, which to an Englishman is rather a poor apology for breakfast, and bowling along over a good level road, boulevarded, and often dead straight for many miles. So far we had met very little traffic outside the towns, and passing on the right was quite a simple matter.

Passing Dreux, which is a curious old-fashioned town of narrow streets, in which to lose the way is much simpler than to find it, we entered a long stretch of flat, dreary country, with scarce a tree in sight and a burning sun overhead. The monotony was broken temporarily at Chartres, only to be renewed as far as Artenay, where we lunched in the cool dungeon of a village inn dated 1642. Reaching Orleans, the country changed completely, and with frequent glimpses of the Loire on our right, we made good progress through Châteauneuf and Gien to Cosne, remaining there for the night.

Passing through Ponges les Eaux the next morning we found Hal Hill and "G.O.K." Thomas, who had been somewhat in front from Abbeville, the latter having taken a toss on a dusty bend downhill which necessitated resting for a few hours. Leaving them to follow we passed through Nevers, after which I struck puncture troubles which delayed me some hours, together with Ashworth, who stood by to lend a hand. Subsequently we were both caught in a thunderstorm and scurried for shelter as best we could, the

others having now practically reached Lyons. The storm having passed away, Wednesday morning seemed hotter than ever, but a high temperature is more bearable than at home owing to the dry atmosphere.

Entering the last stage of our journey of over 500 miles from Boulogne we proceeded *via* Moulins to La Palisse, striking some execrable surface *en route*, much of it resembling a miniature pebble beach.

Lunching at Roanne we thereafter passed through magnificent scenery for many miles, the road winding round the shoulder of hill after hill surrounding well wooded valleys dotted with delightful hamlets.

Reaching our journey's end, we were most hospitably received by the members of the Motor Cycle Club of Lyons, who left no stone unturned to make us feel thoroughly at home, and gave our men every opportunity to become well acquainted with the course of about thirty-seven miles, which had to be covered three times in the Circuit du Rhône on Sunday. Having made personal acquaintance with it, I can testify to its extreme severity. For the greater part the road is narrow and the surface bad. It abounds in hair-pin and S bends, and there is little or no flat travelling anywhere. The principal hill is five miles long, with sharp bends and corners in rapid succession, and rises some 1,500 feet. The shortest possible wheelbase is necessary to take the bends at anything like speed.

We shall none of us regret our visit or forget the kindness and hospitality which we have met, not only in Lyons, but throughout the whole journey through France.

Circuit du Rhone.

F. A. Rose (3½ h.p. Triumph) won the circuit of 180 kilometres (111½ miles) in 3h. 22m. 10s., beating the next best, a French rider of a 3 h.p. Magnat-Debon, by 4m. 54s. There were eighteen starters.

	H.	M.	S.
1. F. A. Rose (3½ Triumph)...	3	22	10
2. Escoffier (3 Magnat-Debon) ...	3	27	4
3. Yenne (3 Magnat-Debon) ...	3	32	18
4. Mazue (2½ Mazue) ...	3	37	22
5. Colomb (2½ Mazue) ...	3	54	20
6. Molinard; 7. Mermet; 8. Devaux; 9. Lorrin; 10. Rozand.			

Escoffier made the fastest lap, 59m.

The Hill-climb.

In the hill-climb on the Cote de Lucre, the Lyons Club won by 456 points against 473. The results are:

1. Debeaune (9 René Gillet) ...	0	4	4
2. Escoffier ...	0	4	49
3. F. A. Rose ...	0	5	29

A banquet followed, and Mr. C. Williams, who has contributed the above report to *The Motor Cycle*, assured the Lyonnais that the N.W.L.M.C.C. would certainly compete again next year.

C. Williams has still more tyre trouble at the village of Moiry. The villagers are consoling him.

**West Essex A.C.**

The following result of the 100 Miles Motor Cycle Cup Competition has been confirmed: 1, W. E. Gunnett ($3\frac{1}{2}$ h.p. Triumph), cup outright (third year); 2, W. M. Gunnett ($3\frac{1}{2}$ h.p. Triumph), medal.

Huddersfield and District A.C.

A reliability trial over a sealed course was held on August 2nd, for which there were ten starters. The prize was a silver rose bowl presented by Mr. J. Candy, and was won by W. A. Lockwood ($3\frac{1}{2}$ h.p. James), J. E. Wortley ($3\frac{1}{2}$ h.p. Triumph) being second.

North-eastern A.A. (Motor Cycle Section)

The hill-climb in conjunction with the Durham and District M.C.C. was held at Quarrington Hill on July 29th, and resulted as below:

SINGLE-CYLINDER CLASS.

Rider and machine.	Time.	Fig. of merit.
1. R. B. Smith ($3\frac{1}{2}$ standard Ariel) ...	60s. ...	68.20
2. C. W. Smith ($2\frac{1}{2}$ New Hudson) ...	77 $\frac{3}{4}$ s. ...	68.45
3. F. Turvey ($3\frac{1}{2}$ T.T. Triumph) ...	50 $\frac{3}{4}$ s. ...	71.60

TWIN-CYLINDER CLASS

1. F. Turvey ($2\frac{3}{4}$ Enfield) ...	70 $\frac{3}{4}$ s. ...	74.07
2. — Ellis (4 T.T. Matchless) ...	53 $\frac{3}{4}$ s. ...	79.60
3. W. Baxter ($2\frac{3}{4}$ Enfield) ...	63 $\frac{3}{4}$ s. ...	81.13

Middlesbrough and District M.C.C.

Result on formula of the fuel consumption trial held August 2nd:

Rider and machine.	Fuel.	Average m.p.g.
1. J. Dale ($3\frac{1}{2}$ Triumph) ...	Benzol ...	217.3
2. J. Gilchrist ($3\frac{1}{2}$ Zenith) ...	Benzol ...	154.5
3. J. Challans ($3\frac{1}{2}$ Premier) ...	Petrol ...	153.8

Scarborough and District M.C.

The results of the trial on the 30th ult. are:

	Points.
1. H. Frain ($3\frac{1}{2}$ Zenith) ...	100
2. { J. W. F. Tranmer ($3\frac{1}{2}$ Norton) ...	99
{ W. B. Atkinson ($3\frac{1}{2}$ Calthorpe) ...	99
{ C. P. Finn ($2\frac{1}{2}$ Enfield) ...	99

Dublin and District M.C.C.

The two days' open reliability trial for the club fifteen-guinea silver cup took place on Monday and Tuesday, and there were eighteen starters.

Precisely at six o'clock on Monday morning the first man, Healy, was sent away from Inchicore Bridge, a landmark just outside Dublin. Monday's route was from Dublin to Glengarriff, 212 miles. The return to Dublin took place on Tuesday *via* Kenmare, Killarney, and Mallow, 224 miles.

Twelve reached Glengarriff in schedule time. The roads were good except between Inchigeelagh and Glengarriff, where bad roads caused tyre troubles.

Scene at the start of the Manchester Motor Club's Reliability Trial (117 miles over Cheshire and Shropshire roads). W. J. Munro ($3\frac{1}{2}$ h.p. Rover) and C. Kettle ($3\frac{1}{2}$ h.p. James) starting from the control at Old Trafford.

Club News.—

Sarum and District M.C.C.

The results of the second hill-climbing competition promoted by the above club, on the 26th ult., are as follows: 1, Mr. King (3½ h.p. Triumph), 55s.; 2, Mr. Foster (3½ h.p. Triumph), 57s. Slow climbing test.—Mr. Edwards (3½ h.p. Premier).

Ilkley and District M.C.C.

In announcing the winner of the hill-climb for the Dawson trophy a mistake was made, and the amended result is as follows: 1, Chas. Thackray (3½ h.p. Contrast-Jap), winner of trophy, Triumph and the club gold medals; 2, J. H. Hoffman (3½ h.p. T.T. Triumph), silver medal; 3, J. N. Longfield (3½ h.p. T.T. Triumph), bronze medal.

Scottish Border M.C.C.

The result on time of the hill-climb (Class I.) on Redpath Rig was as follows:

	Time.
1. Mungall (3½ h.p. Rudge) ...	51½s.
2. Kirkpatrick (3½ h.p. Triumph) ...	56½s.
3. Laing (3½ h.p. Triumph) ...	57½s.

Wansbeck M.C.

In glorious weather on the 30th ult., numbers of the members of the Wansbeck, Morpeth, and the Alnwick Motor Clubs turned out for a combined series of hill-climbing competitions. The contests were held on the difficult Kirby Bank, between Longframlington and Alnwick, and much keenness was manifested and some excellent times recorded. Results:

Competitor and machine.	On time.	On formula.
G. Middleton, Newcastle-on-Tyne (3½ Triumph)	1	2
R. B. Smith, Newcastle-on-Tyne (3½ Ariel)	2	1
J. Charlton, Morpeth (3½ Bradbury)	3	5

Stockport and District M.C.C.

The club's second hill-climb was held on the 30th ult. at Castleton, Derbyshire (one of the worst hills in the district), in fine weather. The following are the results on time:

CLASS 1.—Lightweights.

Slower than X.

1. E. Woods (2¾ Levis) ...	52s.
2. H. Collier (2¼ Enfield) ...	69s.

CLASS 2.—Singles.

1. H. J. Scale (3¼ J.A.P.) ...	4¾s.
2. F. C. Coops (3¼ T.T. Triumph) ...	5¾s.
3. J. Whyte (3¼ T.T. Triumph) ...	10¾s.

CLASS 3.—Twins.

1. H. Marsden (5 Matchless) ...	X
---------------------------------	---

CLASS 4.—Sidecars.

1. J. Emerson (5 M.S.L.) ...	51¾s.
2. W. Bentley (5 M.S.L.) ...	108¾s.
3. A. Hibbert (5 Rex) ...	199¾s.

The results on formula will be published later.

North Staffordshire M.C.C.

The second reliability trial for the Ashton cup was held on the 16th ult. over a course of forty miles, which was covered three times. There were fifteen starters. Result: 1, H. Madeley (3½ h.p. Lincoln Elk), lost 1½ marks, gold medal; 2, H. Blair (7 h.p. Indian), lost 6 marks, silver medal; 3, T. Rodgers (3½ h.p. Rudge), lost 6½ marks.

Western District M.C.

The following are the results of the Williams Shield Reliability Trial held recently to Tetsworth and back, subject to confirmation by the committee: 1, H. Hughes (6 N.S.U. and sidecar), 13s. fast, non-stop; 2, W. F. Ritchie (5 N.S.U.), 16.8s. slow, non-stop; 3, H. Butler (9 J.A.P. and sidecar), 57.5s. slow, non-stop; 4, J. Babbage (2½ N.S.U.), 3m. 38s. slow, non-stop.

Mersey M.C.

A most successful twenty-four hours' reliability trial was recently held by the above club. Out of sixteen entries fourteen started, and eleven finished the course in schedule time and received gold medals. The prize winners were:

T. Henshaw (Victoria-Jap), W. C. Smith (Singer), J. Rimner (Matchless), A. J. Mason (N.S.U.), S. W. Phillpot (Humber), E. Birch (Bradbury), F. C. Jones (Bradbury), V. S. Horsman (Bradbury), J. Henshaw (Douglas), C. Lake (Scott), and S. W. Corty, Captain (N.S.U.).

Westmorland M.C.C.

The reliability run on the 23rd ult. over a course of 200 miles, viz., Kendal, Keswick, Carlisle, Dumfries, Moffat and back to Kendal, resulted as follows: 1, T. A. Armstrong (3½ h.p. Triumph); 2, J. M. Somervell (3½ h.p. Triumph); 3, A. Somervell (3½ h.p. Zenith).

Owing to a mistake in the weighing at the Orton hill-climb, L. Pierce is placed second and J. M. Somervell first.

Coventry and Warwickshire M.C.

At a committee meeting of the above club held last week, the arrangements for the forthcoming open hill-climb on September 2nd were discussed. It was decided to have six classes for the following types of machines: Tourist, light-weight, T.T., ladies', tourist twin, and variably geared machines. The ladies' class will doubtless attract considerable attention, now that so many ladies are riding motor cycles, and the committee hope to secure a representative entry for this event. Two prizes will be given in each event for the first on formula and the first on time, and in addition a special members' prize will be awarded in each class to members who have never previously won a prize in a hill-climbing competition. A team prize and a fastest time of the day prize will also be offered.

The committee hope that their liberality in regard to members' prizes will induce novices to come forward and try their luck, as every inducement will be offered to secure a large and representative entry.

Printed particulars will be ready shortly. The venue of the hill has not yet been decided.

Competitors and others who took part in the hill-climb promoted by the Sarum and District M.C.C.

Tyres in the Scottish Trials.

We hear that machines fitted with Kempshall tyres gained three gold, one silver, and two bronze medals in the Scottish Trials.

Bow Brickhill Hill.

Several readers have asked us for the exact location of Bow Brickhill Hill. This hill lies to the right of the main London-Holyhead Road, one and a half miles on the London side of Fenny Stratford. After descending Little Brickhill on the main road the first turn to the right is taken, and then on sighting a pair of level crossing gates bear right, and in two minutes Bow Brickhill village is reached, and the hill starts in the centre of the village.

A Universal Belt Punch.

Quite a novel form of belt punch has been placed on the market by the Sphinx Mfg. Co., 240, Bradford Street, Birmingham. The cutter B screws into the sleeve A, which may be inserted into the different holes marked 1, 2, 3, and 4. These holes are suitable for belts of 1in., 1½in., 2in., and 2½in. The article is well made, and is manufactured of browned steel. The drawing renders the instrument self-explanatory.

The "Sphinx" Universal belt punch, of which we give a description on this page.

A Tyre Company Change.

We learn that Mr. George Neill, manager of the Charing Cross Road branch of the Margetts Sectional Tyre Company, has purchased the See Band and Tyre Co., of Denmark Street, W.C., and will carry on the business under the same title but as a private concern.

Tyre Strength and Sizes.

There is not the slightest doubt that the majority of sidecar users employ a rear tyre which is too small when subjected to the extra strain caused by the use of a passenger attachment. A correspondent who has experienced a lot of trouble with tyres which were too small for this purpose has had altogether a different result after fitting a 650 mm. by 65 mm. Rom. In all he has covered 4,000 miles with sidecar and passenger in a hilly North of Scotland district, and only had one puncture, the machine used being a 5 h.p. twin V.S.

We also hear that nearly twenty-five per cent. of the riders who completed the journey in the Scottish Six Days' Trials, and were entitled to awards, used these tyres.

The Sidecar Record.

Wakefield-Castrol oil was used by Hugh Gibson on his recent sidecar record. This brand of oil is marketed by C. C. Wakefield and Co., 27, Cannon Street, E.C.

Another Pierce Agency in England.

Donald B. Larke, Stoke Holly Cross, near Norwich, is sole agent for Norfolk and Suffolk for the Pierce four-cylinder and single-cylinder models.

Catalogues Received.

The Anglo-Saxon Stores, 31, Newgate Street, London, E.C., have forwarded us a brochure which contains much that is of interest to the motor cycle rider. This firm makes a speciality of repairs.

Novelties at John Piggott's.

Messrs. John Piggott, Ltd., Cheapside, E.C., are keeping thoroughly up to date as regards motor cycle clothing. Their new pattern overall breeches for wear in wet and muddy weather have been improved by the addition of a special flap to the seat through which the belt is threaded at the back. This protects the rider if the saddle should get wet. The firm has just issued a special catalogue for the convenience of motor cyclists, in which it will be seen that the various commodities are priced at a most moderate figure.

HINTS AND TIPS FOR MOTOR CYCLISTS.

By ROAD RIDER.

AN ADJUSTABLE PULLEY TIP.

360. If no adjustable belt fasteners are carried, a very simple device is to order a few extra feet of belting, and divide the belt in use into a long and a short section, the short section being, say, 1ft. in length. The extra bits can be cut up, say, into 13in., 14in., and 15in. lengths, each provided with a half fastener of the simplest and strongest type. Then, whenever the pulley is adjusted to a different gear ratio, the short length of belt is unhooked and a spare length inserted.

The plan has another advantage, in that whenever a belt requires shortening, one can choose which of four ends shall be cut, and select that which looks most like giving way, or that which has the screw loose, or fitted on the skew.

PREPARING A WATAWATA BELT.

361. The one bad point about the Watawata belt is the difficulty of punching out one of the burred over rivets when the belt has to be shortened. This is an easy job at home in the garage, with a big file, a vice, a hammer, and a proper punch available, but it is often a tricky business by the roadside, with only small and makeshift tools at hand. Before fitting a Watawata belt I always punch out the three or four rivets next the fastener bolt at each end, and substitute common wood screws, which are locked by means of the copper washers and a small square nut cut from leather.

Then if the belt requires shortening on the road, no tool is needed except a screwdriver, and the job is performed in a few seconds.

VALVE GUIDES.

362. Few riders ever give a thought to their valve guides, a detail deserving close attention on any much-used engine. If the guide be badly worn two ill effects will follow. The stem will be a slack fit, which, in the case of the inlet valve, results in a weak mixture through air being drawn in between valve and guide, with loss of power and obstinacy in starting, and in the case of the exhaust

valve may be responsible for unnecessary noise. Or again, the valve may rock a little, the lift of the tappet often having a suspicion of side thrust in it, when the compression will be reduced.

On the other hand, a tight guide, full of burnt oil and accumulated filth, may cause a valve to work very stiffly (with consequent loss of power), or even to jam altogether, with disastrous effects on the timing gear. Therefore, whenever an engine is properly overhauled, the valve guides should be cleaned, and if very much worn, replaced by new ones. The guide usually screws in, and can be easily removed when the cylinder is dismantled.

The Garrard Maxfield Co., of Aston Road, Birmingham, have recently introduced a special wind screen and apron for sidecars, which we illustrate. The sidecar is a new model which the same firm will place on the market shortly.

Striking Successes of the Speedy Singers.

Emulating the success of the 3½
h.p. model, Mr. J. J. Woodgate,
riding the 2½ h.p.

SINGER LIGHTWEIGHT

at the Sutton Coldfield Speed Trials
on 10th July, succeeded in gaining

FIRST

place in Class I., and again in
the Unlimited Class he came in

FIRST

At the B.M.C.R.C. Meeting,
25th July, G. E. Stanley, rid-
ing the 3½ h.p. model, gained

FIRST

place in the Ten Laps Open
Scratch Race, covering the
27 miles in 27m. 5½s.

The 3½ h.p. Singer also holds the

50 MILES RECORD

accomplished at Brooklands, 21st June, in

48m. 37s.

All these Successes simply go to prove
that, besides being remarkably speedy
the Singer is also wonderfully reliable
and consistent in running. You can
prove this for yourself by writing for an
appointment to make a trial run on
one of these famous machines.

TO USERS OF SIDECARS AND TRICARS

Your chief trouble is your rear tyre. Unless very fortunate, you are continually in trouble. Why? Because the ordinary motor cycle tyre cannot stand the strain. It cannot be expected to do the work of a car tyre.

A CAR TYRE will not fit your rim. The only alternative is to fit a cover made on car tyre lines for a motor cycle rim. You also want something stronger than rubber on the tread. The tread should be of special hard steel studs that will not break off or pull out, and the casing should be specially re-inforced. Then you have an ideal tyre for your work. The maximum of strength for the minimum of weight. The tyre illustrated is made on these lines, and costs very little more than an ordinary rubber cover. You can have the same tread fitted to your own tyre.

Particulars and prices on application to—

THE LOMAX TYRE CO. (Dept. Y),

William Street, **BIRMINGHAM.**

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 14 words or less 1/6, and 1d. per word after. Each paragraph is charged separately. Name and address must be counted. In the case of Trade Advertisements a series of thirteen insertions is charged as twelve.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," Coventry, or London (20, Tudor Street, E.C.), by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should state distinctly under what heading and in what issue the announcement appeared.

CLASSIFICATION BY LOCALITY.

For the convenience of purchasers of second-hand motor cycles, the advertisements are classified into districts, as many readers like to know what machines are for sale in their immediate neighbourhood before going further afield.

Plan showing division of England into Sections.

Change for a better. Send details of your present mount, and receive our liberal exchange offer in part payment of a new 1911 model of any leading make.

WAUCHOPE'S
9, Shoe Lane, Fleet St.,
LONDON, E.C.

Telegrams: "Opificier, London."

Phone: 5777 Holborn.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, 2d. will be charged for registration, and three stamped and addressed envelopes must be sent for forwarding replies. Only the number will appear in the advertisement. Replies should be addressed, "No. 000, c/o 'The Motor Cycle,' Coventry"; or if "London" is added to the address, then to the number given, c/o "The Motor Cycle," 20, Tudor Street, E.C.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but if not we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions exceeding £10 in value, a deposit fee of 2s. 6d. is charged, when under £10 the fee is 1s. All deposit matters are dealt with at Coventry, and cheques and money orders should be made payable to Illife and Sons Limited.

SPECIAL NOTE

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR BICYCLES FOR SALE.

SECTION I.

Northumberland, Cumberland, Durham, and Westmoreland.

1911 Phelon-Moore, 3 1/2 h.p., very little used, good as new; £50.—C. Gibson, 1, Parkside Rd., Kendal.

1910 Free Engine Triumph, perfect condition: one trial and examination; £40.—1, Market Place, Egremont, Cumberland.

PHOENIX, 8 h.p., 1909 model, magneto, Stepney, offers invited; Phelon-Moore sidcar wanted.—Motorist, 9, Winifred Terrace, Sunderland.

6 h.p. N.S.U., 2-speed, and free engine, in perfect condition, good sidcar machine; exchange single, good make, and cash to adjust.—4, Salford Terrace, Egremont, Cumberland.

TRIUMPH, 1907, magneto, h.b.c., accessories; write wire, or phone for immediate deliveries.—Turvey and Co., The Motor House, Sunderland. Tel.: No. 626.

SECTION II.

York and Lancashire.

1911 Free Engine Rover, unspratched; £52, with spares.—Wards, North St., Wetherby.

TRIUMPH, 1907, magneto, h.b.c., accessories; £22, offers invited.—343, Green Lane, Bolton.

SINGER, 3 1/2 h.p., free engine, June, 1911, as new; £45.—Cottam, St. Mary's Gate, Lancaster.

2 1/2 h.p. Minerva, new studded tyres, perfect condition; £12/12.—Richards, 125, High St., Bolton.

3 1/2 h.p. Rex, 1908, Bosth, new Amac, Whittle belt, splendid condition; £18.—93, Wallgate, Wigan.

1907 Triumph, magneto, h.b.c., Watawata belt, lamp, etc., complete, excellent condition; £22.—Below.

N.S.U. 2 1/2 h.p. Lightweight, 1911, brand new, under-gear pulley, magneto; £26.—Below.

1910 Singer Moto-Velo, 2 h.p., Lightweight, magneto, new tyres, two new belts; £23.—Below.

1907 Triumph, magneto, new cylinder, piston, carburettor, h.b.c., just back from makers; £24.—Below.

1911 B.S.A., Rover, and Triumph, free engine models, from stock.—Hartley Clegg, Ltd., Burnley.

ENFIELD Lightweight.—Sole agents for Manchester and district, Newton's, Blackfriars St., Manchester.

2 1/2 h.p. Lloyd Lightweight, new tyres, re-bushed, excellent condition; £12/10.—68, Wellington Rd., Stockport.

1910 Rex, 3 1/2 h.p., just been fitted with 1911 P.M. 2-speed gear, chain drive; offers?—Burnell, Castleford.

PREMIER Motor Cycle for sale, 3 1/2 h.p. twin, almost new, magneto, and h.b.c.; price £32.—17, Market Sq., St. Helens.

N.S.U., 1911, 3 1/2 h.p., Model de Luxe, 2-speed and free engine, new; £42.—Graydon, 19, Kensington Rd., et. Anne's-on-Sea.

CHEMICO MOTOR BIKE OIL

LUBRICATION is a matter of utmost importance to the motor cyclist, and an item which is apt to be too lightly considered. You cannot give too much attention to this, or exercise too much care in the selection of a suitable oil.

CHEMICO MOTOR BIKE OIL

has had our careful attention, coupled with our wide knowledge of oil, exercised in its production, which with every confidence we recommend. CHEMICO MOTOR BIKE OIL is exceptionally high in flashpoint, will not carbonise the valves, or soot the plug, but will circulate everywhere necessary and keep the engine perfectly cool.
WE URGE every motor cyclist to test CHEMICO MOTOR BIKE OIL, and give attention to the running of the engine during test.

Note how sweetly it runs and how clean the valves keep.

FARRAR'S
HALIFAX
SIDECARS.

Absolutely the finest value on the market.

LESS POWER.

It is admitted by experts that, owing to the unique design, far less power is required to propel Farrar's Sidecars than any other style on the market.

NOTE OUR front arm which grips the sidecar CENTRE. Nothing lopsided about this attachment.

All our Sidecars are now fitted with Farrar's quick detachable joints and cranked back axles, refinements found on very few other makes.

MODEL "DE LUXE"	£5 5
MODEL "C," with cane body	£8 0
MODEL "D," with coach-built body	£7 0

WANTED.

Triumphs, Rexes, Minervas, N.S.U.'s, Douglas's, Moto-Reves, and other magneto machines.

Cash waiting.

We advertise LESS MACHINES THAN what we have got; other people advertise MORE MACHINES THAN they have got.

If we put all the machines in our list we should want a couple of pages, and, at our cut prices, this would not pay. We HAVE the largest stock in ALL ENGLAND; there is no cod about us. Ask anyone who has been to Morecambe, and they will all tell you the same story—"The place was bunged out to the doors with stock, and we never saw so many in our lives." We have this repeated DAILY. Come and CONVINCE yourself before buying elsewhere, or write us.

WE HAVE weekly deliveries of the following new machines; if, when you write us, we are sold out, we shall have one in the week afterwards. We purchased SOME HUNDREDS at the Show, and we are out to SELL THEM on our money-back terms.

The Canary is STILL IN SONG—come and see it.

World's Records

—WITH THE—

HELLESEN DRY BATTERY IGNITION SYSTEM AT BROOKLANDS.

Mr. F. A. McNab

riding a

3½ h.p. TRUMP-JAP
captured

2 HOUR RECORD

Covering 110 miles 297 yards.

100 MILE RECORD

Time:—1C9 min. 8½ sec.

Mr. McNab used an ordinary standard HELLESEN Dry Battery and "H. H." COIL taken from everyday stock, which, as usual, gave perfect satisfaction. This performance again proves the superiority of the "HELLESEN" system over every other form of ignition, yet, although the best system, it is the cheapest.

Install this system on your motor cycle or car. We will give you every assistance willingly.

Catalogues sent free—anywhere.

MOTOR BICYCLES FOR SALE.

2 1/2 h.p. Spring Frame Bat, M.M.C. engine re-bored, 2 1/4 new piston, h.b.c., variable jet Amac, Mabon clutch, Simms magneto, Watawata, new hubs.—Parkes, 101, Grosvenor Rd., S.W.

19 11 Triumph, free engine, good as new, Autoclipse lamp, horn, exhaust whistle, spares, including platinum points and new belt, fittings for sidecar; £54.—Adam, West Malling, Kent.

3 1/2 h.p. Triumph, bought December, 1909, not run 1,000 miles; any trial and examination; studded tyres; £28, extremely good value.—A. C. Crombleholme, 11th Hussars, Sborncliffe, Kent.

TWIN Rex, 5h.p., Bosch magneto, 1911, h.b.c., perfect order, as new, fitted for sidecar; owner too nervous; £30, or offer.—Proprietor, Prince Alfred, 35, Lisimore Rd., Gospel Oak, N.W.

SACRIFICE.—1 1/2 h.p. Motosaccho, splendid order, new spare belt, 2 spare accumulators, must be sold; also 4 1/2 h.p. Automoto, £10; and 2 1/2 h.p. Werner, £9.—Fuller, 253a, New Cross Rd., London.

TRIUMPH, Millford sidecar, late 1910, free engine, Cowey, Triumph lamp, Brooks carrier, spares, all new condition; cost over £80, sell £60; no offers.—H., 7, Cleveland Rd., Acton Green, Chiswick.

WIN-PRECISION Motor Cycles; immediate delivery 1911 model, gradual payments, £2 monthly, cash £45/10; particulars on application.—De Nevers Automobile Agency, Empire House, Piccadilly, W.

3 1/2 h.p. Ariel, m.o. valves, B.B. carburetter, 2 accumulators, new Lyso belt, tyres in fine order, good bill-climber, suit sidecar; £10, or part exchange good push bike.—Huggett, Frith Farm, Walton-on-Hill, near Epsom.

19 11 Triumph, complete with all accessories, done about 300 miles, owner obliged to give up; £47.—Can be seen Cheyne Garage, 93, Manor, Chelsea, or write, Warren Hastings, 5, Pond Place, South Kensington, S.W.

TRIUMPH, standard, 1910, run 4,000 miles, extra pair footrests, Whittle belt and spare, engine just overhauled, new Michelin tyre fitted, general condition perfect; owner buying car; £39.—85, Kingston Rd., Wimbledon.

19 09 (late) Minerva Twin, 4 1/2 h.p., condition perfect, just thoroughly overhauled and enamelled, new cord and belt, F.R.S. lamp, and long footboards; any trial by appointment; no exchanges; 30 guineas.—Meeton, West St., Dorking.

BROOKER'S Trusty Triumph, one stop since September, 1909, Palmer cords, new F.R.S. searchlight, Bowden magneto control, special piston, extra back mudguards, toolbars, and Michelin butted tubes, magnificent condition; £37.—15, Park Rd., Wandsworth, S.W.

3 1/2 h.p. 1911 Arno, new June, perfect order, with F.R.S. lamp, Jones speedometer, spare tube, belt in case, all spares, also nearly new Chater-Lea Comfy sidecar to match, splendid turnout; together £40, separate £37/10 and £4/15; trial willingly.—W.T., Gordon House, Roland Rd., Walthamstow.

F.N., 1909, 5-6 h.p., only done 4,350 miles, Davison oil and petrol gauges, special inlet pipe, long handle-bars, new Continental on back, front unpunctured, does from 5 to well over 50 m.p.h., now being thoroughly overhauled, perfect condition; £27/10.—Cecil Harland, Harefield Vicarage, Uxbridge.

WIN Precision Motor Cycles.—Immediate delivery of 1911 model, Druid forks, Bosch magneto, B. and B. carburetter, Dunlop tyres, £45/10; cash or gradual payments, £2 monthly; trial by appointment, any reasonable distance.—Jennings, 268, Hornsey Rd. (near Public Baths), Holloway, London.

HAZEL Lightweight Motors.—We are now in a position to give early delivery of our 2 1/2 h.p. model, the lowest, shortest, and lightest machine of its power on the market, fitted with Jap engine; price 38 guineas; second-hand machines in part payment; many good second-hand machines in stock at reasonable prices.—The Grims Cycle and Motor Co., 24-28, Woodford Rd., Forest Gate, London, E.

SECTION IX.

Somerset, Devon, Dorset, and Cornwall.

19 11 Rudge-Whitworth, 3 1/2 h.p., fixed engine, in stock; £48/15.—Moffat, Yeovil.

LATEST 3 1/2 h.p. Triumph, with free engine, new; have purchased car; £52.—Goudry, Red House, Dorchester.

BRADBURY, 3 1/2 h.p., accumulator, enamelled green, good order; bargain.—Strout and Carne, Lostwithiel, Cornwall.

3 1/2 h.p. Quadrant, Bosch, spring forks, B.B., h.b.c., 3 1/2 Lyso belt, spares, splendid order; £18, offers.—Radford, Pitt, Uffculme.

SECTION X.

Scotland.

1 1/2 h.p. Motosaccho, late 1908, magneto, Palmer tyres, 1 1/2 good running order; accept £14.—Frazer, Scone, Perth.

QUADRANT, 3 1/2 h.p. (choice of two), perfect throughout; bargains at £12 and £9.—McLaren, Craigmill, Stirling.

TWO 2-speed Model E Douglasses, in stock, £48 each; free engine Triumph delivery 10 days.—Dall, Ladybank, Fife.

A Valve Transposition.

A SUGGESTION is made elsewhere in our pages this week with regard to overhead exhaust valves. It is pointed out that in the case of overhead inlet valves there is some amount of delay in removing an exhaust valve when the latter is situate underneath the inlet, as compared with the rapid removal of the exhaust valve when it is merely covered by a screw cap. Our correspondent inquires why not make the exhaust valve overhead and the inlet valve underhead, basing his query on the fact that the inlet valve seldom requires either attention or renewal, whereas in the case of the exhaust valve it usually requires replacement, grinding, or some form of "tuning up" about every thousand miles, and perhaps more often when the machine is driven all out for prolonged journeys. Anyone will admit that if the exhaust valve and its seating could be readily detachable from the cylinder top without disturbing the inlet valve, it would be a time saver in grinding and replacing, as it would be possible to carry a complete valve dome, spring, etc., fitted up, and to change the whole dome when compression weakened through pitting of the valve or total failure occurred due to a broken valve.

At first sight the suggestion seems quite easy of accomplishment, and, of course, overhead exhaust valves are no novelty, but we do not know of an overhead exhaust in conjunction with a mechanically operated inlet valve underneath it. The chief objection to the idea in motor cycle practice is the lack of head room. The exhaust valve requires a strong spring and rocker, and these mean space in which to allow them to work. A separately constructed seating so means some amount of weight in metal to enable

a suitable form of seating to be cast which will not distort with the heat. The overhead arrangement would also necessitate a somewhat stronger and heavier tappet rod owing to its length in comparison with the shorter and better supported tappet of the conventional type. Among the advantages of the arrangement are the above-mentioned accessibility, probably better cooling of spring, guide, etc., owing to their removal from close proximity to the heat of the cylinder, and the ease with which the tappet rod could be made adjustable to allow for stretched valve stems and wear of valve foot and tappet rod end.

The efficiency of engines with both valves overhead is known, but the drawback of possible damage to the piston if either valve were to break and fall into the cylinder is also known. With one valve made overhead and the other underhead in a separate valve chamber, some objection to breakage is overcome, because it is possible so to design the chamber that the valve heads in case of breakage cannot enter the space above the piston. There still remains, however, the question of rapid removal of the exhaust valve, and this has caused our correspondent to bring forward what may be considered a valuable suggestion, particularly to those makers who have adopted the overhead inlet valve and are faced with the question of a comparatively slower method of exhaust valve replacement. We do not think there is very much to choose between the two systems when it comes to a question of a quick change of exhaust valves, but if there is anything in it the valve which is covered by a screwed on cap certainly has it. Other advantages and disadvantages may make themselves known, but to be able to fit a machine on tour with a complete unworn seat, exhaust valve, and spring with a minimum of trouble and time is a laudable desire.

The N.W. London M.C.C. Tour to Lyons.

DURING the few days remaining before the race our men spent the greater part of their time on the course, which requires some knowing, and is in places very dangerous. There are three level crossings and the gates are frequently closed. Most of the circuits were done early in the morning before the heat became severe. Punctures were fairly frequent, and all tyres were very thoroughly overhauled.

On the evening of Friday, the 4th inst., we were received at the rooms of the M.C.C. of Lyons, and M. Bouget, acting on behalf of the president, M. Bouvard, who is unfortunately ill, made a formal speech of welcome, the usual replies and felicitations following. We broke up early to secure as much sleep as possible, the start being at 6 a.m. from La Place de la Demi Lune, on the outskirts of Lyons.

There was a handicap of one minute per h.p. which worked out fairly well considering the nature of the course. Three circuits of about 37½ miles each had to be covered, making about 112 miles in all of the most difficult going it is possible to imagine, the corners, sharp bends, and gradients being numberless. Fairly well up to time the first four men were pushed off in a row, being followed in a few minutes by five more in the same manner; this method of starting in a comparatively narrow lane being a decided novelty to us. Our starters for various reasons were reduced to four, Printz, who arrived late overnight, having come through

from Dieppe in two days being among them. Thomas had a trial ride round the course on his Premier after the swelling of his knee had subsided, but found it impossible to race, and M. Martin, one of our French friends, who was exceedingly keen on getting astride an English machine, undertook to ride in his place, so that nominally we had five starters.

All got away well, and we settled down to wait for the first arrival. Escoffier was the first in, having passed seven or eight others, and making a first round time of 59m. Rose came through in 1h. 4m., and Printz put up a splendid performance in doing 1h. 7m. on a course he had never seen. Hill, who was our great hope, picked up a huge nail, and had no sooner remedied this trouble than he picked up another, and was so late the first time round that he was thus early out of the race. Rose continued to run splendidly, however, and, having no trouble of any sort, ultimately ran home a winner by 5m. on actual time, or by 2m. on handicap.

The French took our win in excellent part, and their congratulations were none the less hearty because they never dreamed we should beat their crack cornerists.

At a well-attended banquet in the evening, to which we were invited, we were thoroughly fêted, and there is no doubt our visit will do much to promote good relations between the sporting communities of the two countries.

C.W.

NOTES ON THE CIRCUIT DU RHONE RACE.

BY THE WINNER, F. A. ROSE.

The English team was certainly not as numerous as was to be desired. Hal Hill was our hope, for none of our other speed men had turned up, and we soon learned to respect the Frenchmen with their little engines and absurdly light machines. They are certainly very daring on corners, and with good reason, for the roads for a hundred miles round here are all corners, and it is considered no crime in this country to take them at full speed—if you can.

On Thursday morning the only available riders were Hill (5 h.p. Bat), Westacott (3½ h.p. Zenith), and Rose (3½ h.p. Triumph); Thomas (3½ h.p. Premier) having already sampled the corners and damaged his leg. We were shown round the course on Thursday by Yenne, one of the French riders. It is a very sporting course, full of impossible corners, loose stones, and hills. It crosses two mountain passes, and has 200 bad corners to the lap—600 in all.

We began to understand why they favour light machines here, and why handicaps in the race are so small; it is a course for lightweight and small engines.

On Sunday morning we all turned up at the start. There was some delay, as nobody had thought of bringing pins to fix on our numbers, but eventually we got away in batches according to handicap. The first few miles were exciting. I had a ding-dong race with Valenzano over the narrow twisty roads, but he soon punctured, and I pushed on and passed one or two of the weaklings. On the first mountain road I overhauled a Frenchman, and managed to pass him at the top of the Col de la Croix du Blanc. Down the other side caution was necessary on account of the turns, especially as the road was in no way closed to the public, and I passed sundry cattle and farm carts. I checked in at St. Bel just as Escoffier was leaving, and hoped to catch him before starting the climb to the next pass, but I little knew my man—all I caught was a cloud of dust.

Climbing the twisty road to the pass, I found my 4½ to 1 gear none too low. The gradient was easy, but picking up

after the corners was hard work for a hot engine. Someone was in front, but I could not pass till the top was reached. Then, opening out, I got ahead, found an evil corner, skidded in the dust, and rolled over. I had not counted on finding three inches of dust, but no harm was done, and I was soon off, the other man having courteously slowed to ask if I was all right.

The worst of the first circuit was now done. A long run down a good road, twisty at first, but straightening afterwards, a mad blind down a village street full of people who had turned out to see the fun, then into the main road and eight miles back to Lyons with the engine roaring at about 3,000 r.p.m. Would something break? I lay down and waited, and as I was microscopically adjusting the spark advance something went past at about seventy. It was not Hill; it must be Debeaune on the big René Gillet, and I felt sad, for I knew he must have passed Hill. As I ran into the control everyone shouted, "Hill, ou est il?" How should I know? I pushed off, feeling that the reputation of the English contingent depended on my efforts alone.

The next circuit was much like the first. I thought I saw Debeaune starting off just as I rounded a bad bend, and hoped to catch him on the mountains, his long wheelbase being in my favour. I never saw him, and afterwards heard he had given up because his gear was too high. I wonder if he conked; I know I did.

Halfway round the circuit I saw Thomas by the roadside. He waved me on frantically, and held up three fingers. That made me think. On the home straight I saw Hill resting. He shouted me to go on. I thought him rather heartless, for my poor engine was racing as though it could not last another minute.

At the end of the second lap they said I was in front. That seemed impossible, for I had seen neither Debeaune, Yenne, or Escoffier, but it gave me hope, and I kept the engine hard at the load. I was beginning to know the corners and to like them till I took one just a little too fast

CIRCUIT du RHONE

HILL CLIMB
OF THE
N.W. LONDON
&
LYONS M.C.C.'s

- (1) The crowd at the starting point. (2) Mr. Yenne (Magnat Debon) of the Lyons club taking a corner in the hill-climb. (3) The chief control.

(6) F. A. Rose (31 b.p. Triumph) after winning the Circuit Race for the North-west London M.C.C.

The N.W. London Tour to Lyons.—

and went up a bank. No damage except a scraped hand and bent footrests, so off we went minus a pump. Then I sighted a Magnat-Debon, and followed it up the mountain till it punctured. Later I saw Printz sitting in a ditch, and, unfortunately, with his hands bandaged. His hands being oily had slipped from the bars, and he had come a cropper, smashing his three-speed gear. The last few miles was a

triumphant procession, then on to the finish, sign, and—drink. I was thirsty.

Escoffier and Yenne came in at intervals of five minutes. They had had punctures and sooted plugs, and Escoffier had hit a dog. Their engines must be wonderfully efficient to have picked up so much lost time. They congratulated me as though they would have been sorry to beat me. These French motor cyclists are real sportsmen. F. A. ROSE.

A FRENCHMAN'S OPINION OF BRITISH MACHINES AND THEIR RIDERS.

We have received from Mr. Schilling, the secretary of the Motorcycle Club de Lyon, a copy of the local sporting journal, which gives a detailed account of the race and hill-climbs organised by the club in connection with the visit of the N.W.L.M.C.C. Its comments on the English machines will be of considerable interest to our readers. "The English motor bicycles," it says, "are heavier and more powerful than those generally used by French riders, and this is accountable for the fact that the powerful English motor bicycles have never given the same troubles which were inherent in the powerful French machines which appeared ten years before their time. We do not say that these models from the other side of the Channel are faster, although an Englishman has won the cup, but their constructors have transformed excessive power into comfort. The English competitors were not, like ours, crouched on their machines so as to offer the least resistance to the air, and it was at once apparent that the engine power was amply sufficient to propel the machine at a great speed. The English machines carried every accessory for serious touring. We even found that one

of these machines had a speedometer. Several saddles were provided with backrests, a thing we have never yet seen in France, and to start by means of a clutch the pedals were fitted, which is also unknown in this country. The footrests on certain machines are very comfortable, and the cooling appears to have been particularly well worked out. Several machines had clutches and change speed gears, and those which do not possess these refinements are provided with an easy and simple means of reducing the gear by altering the width of the pulley flanges. Lastly, the sidecars which came by road showed to us that this economical means of touring for two people is popular in England. Rose deserves every congratulation. In fact, I was particularly pleased," continues the writer of the article, "with the indescribable enthusiasm with which Rose's fellow members greeted him when he came into view of the control and showed that the laurels rested with the N.W.L.M.C.C. What attachment to their colours must these sportsmen have, and how we would like to see in every sporting club in France the *esprit de corps* flourishing to such a degree."

Track Racing in England and America.

THE casual visitor to Brooklands on a race day, be it a B.M.C.R.C. or B.A.R.C. meeting, is probably struck by the fact that the attendance is, to say the least of it, meagre. The much-talked-of "man in the street" does not care for motor cycle racing, and yet some

years ago push-cycle races used to attract quite big crowds. True, there was a fair attendance for the International match, Collier v. de Rosier, but nothing like the crowds one sees in the United States. Speed apparently has no attraction for the average Englishman, for not even Nazzaro and the prospect of some 120 odd miles an hour had the effect of seriously depleting London's population and swelling that of Weybridge for the day.

In America, enthusiasts flock from all the countryside to witness motor cycle racing, which is about as popular as horse-racing is in England, possibly owing to the fact that there is an official ban on the latter sport. Excitement is intense and enthusiasm runs high at a motor race meeting—a very different state of affairs from that in England.

At Brooklands it is admittedly difficult to follow the progress of a race intelligently, more especially a handicap, owing to the enormous size of the course. Even a car race is difficult enough, but motor cycles appear but mere specks on the Byfleet banking. There is nothing in America like Brooklands, the Parkway track being, I believe, much bigger and more in the nature of a road race track. The tracks which attract the American crowds are circular, or nearly so, and much smaller, resembling in size the Canning Town track or some of the Parisian velodromes. They are made of wood, and banked the whole way round.

The cement surface of the Brooklands track is naturally somewhat bumpy, while the comparatively smooth wood surface of the American tracks, of which practically every town of any importance has one at least, is far more conducive to high speeds.

Of course, it must be remembered that Brooklands was primarily intended for cars, and that they feel the bumping far less.

Enthusiasm naturally runs much higher when the spectators are able closely to follow the doings of the riders, and it is naturally impossible on a small track to run fields of, say, twenty or thirty, as is done at Brooklands.

It is certainly a pity that more enthusiasm is not shown in this country, but the fact that Brooklands is so far from town and that it is so difficult to follow the races may account for this.

I have heard a rumour respecting a saucer track on Yankee lines to be constructed in London. If it were to be taken in hand, I believe it would be a success, provided the racing were conducted on proper lines. P.C.C.

TERRITORIALS IN CAMP AT DOVER.

Rev. Hassard-Short, chairman of the A.A. and M.U. Motor Cycle Section, and Chaplain to the Kent Cyclist Battalion, on his P. and M. He is taking a very active part in this year's manoeuvres.

A NEW MODEL PREMIER.

ALTHOUGH not common knowledge, it has been known to us for some time that the Premier Cycle Co., Ltd., Coventry, were devoting their attention to the production of a medium weight single-cylinder machine, and the outcome is the $2\frac{1}{2}$ h.p. model illustrated on this page. Its lines are not yet definitely settled, but so far as the engine and its appurtenances are concerned, these are of 1912 design. It is quick to show its capabilities to all and sundry, for it is being ridden in this week's six days' Yorkshire reliability trials of the Auto Cycle Union by *J. H. Crickmore. The principal

Power unit of the new model $2\frac{1}{2}$ h.p. Premier.

66 by 72 mm., giving a cubical capacity of 246 c.c.; mechanically-operated side by side valves and a ball bearing crankshaft are used, which is the usual Premier practice. In general appearance the power unit is a replica of the now well-known $3\frac{1}{2}$ h.p. Premier, the magneto being carried on a platform abaft the cylinder, where it is well protected from foreign matter, and the B. and B. carburetter is fitted at the rear of the magneto. It will be observed from the

illustrations that a dropped frame is used on this new model which gives an extremely low saddle position, a rider of short stature being able to rest his feet on the ground with ease. Another departure is the Druid girder spring forks. For this week's difficult trial in Yorkshire Mr. Crickmore has had special fittings on the machine, such as a three-speed hub gear, the Armstrong Triplex being the one selected. We understand that the machine in its complete form as illustrated weighs in the neighbourhood of 150 lbs., and its preliminary

J. H. Crickmore, who is riding the $2\frac{1}{2}$ h.p. Premier in this week's A.C.U. 1,000 miles trial in Yorkshire.

trials have proved that it is a fast and handy little mount, which should appeal to that section who look askance at the comparatively heavy $3\frac{1}{2}$ h.p.

A.C.U. INTER-TEAM CHAMPIONSHIP.

The preliminary regulations with regard to the above competition, to be held on Saturday, September 16th, are now ready, and will be sent to the secretaries of clubs interested on application to the Auto Cycle Union, R.A.C. Buildings, Pall Mall, S.W. The awards are—the winning team to receive a silver trophy and its members gold medals; teams finishing second and third to receive silver and bronze medals respectively, provided not less than ten teams enter. Competing machines should be standard touring motor cycles, but T.T. machines are eligible, provided they are sufficiently silenced. Cut-outs are prohibited. Our readers will remember that the winners of last year's competition were the team representing the Coventry and Warwickshire M.C., whose six members all accomplished a non-stop run over a 156 miles course in Derbyshire.

Pulley side of engine showing disposition of magneto, carburetter, and brake pedal.

departure from standard practice in the case of the engine is the *désaxé* or offset cylinder, the advantages of which type of construction were dilated upon in a recent issue. The bore and stroke are

The new $2\frac{1}{2}$ h.p. three-speed Premier described on this page.

Silencers in the A.C.U. Six Days' Trial.

If I read the regulations aright, the A.C.U. do not propose to seal silencer cut-outs in the 1911 Six Days' Trial, as I fancy has been their invariable rule in the previous trials; but, of course, marks will be awarded for silence and deducted for noise. Now I hope the judges are not going to misread the popular opinion on this point. I have known occasions when they have taken notes of noise or silence on freak hills across lonely moors, when the engines were opened out to the last notch on low gears with their cut-outs open, or their drilled silencers permitting the maximum of noise. Nobody is annoyed or injured by a sharp barking noise on a lonely hill where there are only grouse and sheep to hear, and it really does not matter twopence whether a machine is noisy under these conditions or not. I trust therefore that no occasion of this sort will be selected for making the silencer observations. On the other hand the sharp flat bark of a well-tuned engine on open exhaust is a public nuisance in populous places; and nobody could grumble if the judges inflicted severe penalties on any competitors noticed to be driving on the open exhaust in towns or villages or when passing other traffic. I believe the A.C.U. committee are firm believers in the absolutely noiseless motor cycle as an ideal; but I also believe they have the wisdom to recognise that the feeling of the motor cycling community is dead against them on this point, and that, therefore, they will only attempt to enforce silence where silence is required of every gentlemanly rider as a matter of courtesy.

The Toolbag Question.

"Ready for the road" is an elastic term, and as such is glibly used by the compilers of catalogues; but when one examines their definition, one is driven to wonder if they have ever ridden a machine on the road at all. I recently took delivery of a modern machine, for which I paid an inclusive price "ready for the road." When I overhauled it, I found it had two small toolbags, mounted one on each side of the rear carrier. The one was filled to suffocation by a neat leather tool roll, holding all the spanners, etc., I could reasonably require. I thought hastily that my surplus spares were intended to be housed in the other. On opening the other, I was disappointed of the anticipated vacancy. It, too, was filled to suffocation with a tyre repair outfit, two big spanners, a selvyt, and a cleaning cloth. I eyed my brace of spare valves, my spare sparking plug, my spare belt fastener, and my spare belt with pain—where were they to go? There is no accommodation for them on any of these "ready for the road" machines. The belt is admittedly a puzzle. When I am on a tour, my personal luggage occupies the entire carrier, and my spare belt is looped untidily round the handle-bar; when I am on a short run, my belt ties on to the carrier top. But for the enumerated spares there remain only two alternatives—both bad; one is our pockets, the other is in the luggage with the tooth powder and shaving soap. There ought to be a third bag *à la* Enfield filling up the space usually

wasted between carrier top and mudguard tail; this would just hold the usual spares, and only leave the spare belt and tube to be catered for by individual fancy.

Dirty Oil Tanks.

Many suggestions rain in on us for the improvement of the motor bicycle, but I do not remember that any critic has ever laid his finger on one very simple defect, which could easily be remedied. I refer to the normally filthy condition of the average tank in the neighbourhood of the oil-filler hole. Of course, users are greatly to blame for replenishing their oil tanks without the aid of a filler, so that the green mess slops all over the tank. But the maker must also bear his share of the nuisance. A large milled cap is usually set so close to the top tube and a tank clip that the resulting chinks and crannies cannot be easily cleansed; there are also often quite permanent leaks from the vent hole of the filler cap, from the spindle of the pump piston, and around the ball valve at the bottom of the pump. I have only once owned a clean oil tank. It had an outside pump, with good sound union joints, and the filler cap was carried on a short curved elbow, projecting from the tank side just below its top. Only gross clumsiness could soil the top of this tank, and if soiled it was very easily cleaned, while good workmanship had altogether obviated a leakage at every point. The outline was not so neat as the modern standard flush-sided tank, but a neat outline is of little value if the surfaces are permanently filthy. Who will give makers a lead at the next show?

80 M.P.H. ON A SINGLE CYLINDER—PERHAPS!

S. Matthews, an American rider of a Thor IV. A cutting from a leading Chicago newspaper accompanying this photograph says: "Matthews thrilled the 20,000 spectators. At times this midget speed demon was travelling at the rate of 80 miles per hour. He averaged 75 miles per hour." Are we expected to believe that there are single-cylinder machines in America capable of averaging or even attaining 75 m.p.h.?

THREE SPEEDS

IN CONJUNCTION WITH 2½ H.P.

It is some weeks since we referred briefly to a spin on a 2½ h.p. three-speeded New Hudson, but since that time we have been enabled to enjoy an extended trial, and our further acquaintance with the machine has even improved the high opinion we formed of it on the occasion of our initial test. Easy to start, a really speedy machine for its size, economical to run, and abso-

saddle position of any standard mount we have yet ridden, and the increased feeling of comfort and security as a result is most pronounced.

The Well Balanced Engine.

The engine of the machine we tried was the new model mechanically-operated side by side valve J.A.P., and the absence of effort on the part of this engine when running between 20 and 30 m.p.h. greatly impressed us. Of all the excellent J.A.P. productions we have been privileged to try we do not hesitate to characterize the 2½ h.p. as the best yet. Knocking and labouring are practically non-existent; it responds to the throttle in a manner suggestive of applying spurs to a war-horse, and in conjunction with the three-speed gear we found we could do more than we could with the finest of 3½ h.p. single-gear machines, and with a good deal less fuss and risk to the rider, which is saying a good deal.

It seems almost unnecessary for us to refer to the bicycle work of the New Hudson, for this company always made a pretty bicycle, and if we say that they commenced designing motor cycles where other people left off we consider we have hit the nail on the head.

To revert to the gear, this is simplicity itself to manipulate. Although a clutch operated by a pedal on the right foot-

rest is provided, one may ignore its presence, for by merely raising the exhaust valve lifter and moving the gear change lever to the required notch, shock or jar is entirely absent. What we particularly like about the Armstrong gear is its direct middle ratio. In riding through crowded thoroughfares or along narrow by-lanes, the midway ratio is the one most generally used. It is not low enough to overheat the engine, which also signifies that it is not so low that

New type of gear-changing lever and bracket fitted to the forward part of top tube. The fittings are larger and stronger than hitherto fitted to Armstrong gears.

utely reliable and dependable for hill-climbing under all conditions, no wonder it is taking a powerful hold of the motor cycling community.

Why, only a couple of years ago people would have laughed at the idea of such a hillputian engine climbing Snaefell Mountain unaided, yet the little New Hudson recently sailed up with ease with our 11½ stones in the saddle, and never once required the lowest gear. It picked up after the hairpin and the Boosneck in surprising fashion, and only once did it exhibit signs of requiring a further reduction of the ratio.

The New Hudson, with its gracefully swept down top tube, enables the lowest

The power plant, also showing control of the Armstrong-Triplex gear. The change speed lever is now placed immediately behind the steering head.

the engine is racing round at an uncomfortable speed with the bicycle only just moving; further, there is no noise but the regular beat of the engine. With the lowest ratio in engagement, one may crawl at a speed limited only by the capability of remaining upright, which discounts fully two-thirds of the fears associated with traffic riding. Once or twice in riding the machine in traffic, we have been brought to a standstill, but have remained seated in the saddle until an opening occurred, and by digging on the ground with our feet with the lowest gear in engagement, the engine fired immediately on releasing the valve lifter.

During our trials of the machine we have been convinced over and over again that, notwithstanding the extra complication incidental to a change-speed gear of the type under review, a variably-gear mount is the simplest to manage. On tortuous hills a single-gear mount is most difficult to control and keep going, and many are the risks taken by their riders in approaching blind corners at too fast a speed, whereas the non-chalant owner of a variably-gear mount progresses upward and upward at a comfortable pace, slow but sure, utterly oblivious as to the number of twists and hairpins which may abound. And these are in brief the main reasons which have caused us to thoroughly believe in the ultimate future of the variably-gear motor cycle.

2½ h.p. three-speed New Hudson with which our trial was made.

A TANDEM MOTOR CYCLE ENGINE.

THE motor cycle engine illustrated herewith has been designed by Mr. Prentis, of Messrs. Packer and Prentis, Ilford, and was brought to our notice by Mr. J. Rowe, 189, Ilford Lane, E.

It consists of two vertical cylinders with opposed cranks, and is intended to be carried tandem fashion in the frame. On the two flywheels H and J are the pinions E and G, which mesh with the intermediate wheel F, which revolves at half the crankshaft speed. The square shaft M and the pulley-shaft N are provided with dog clutches at either

end, so that the drive may be taken either through the central pinion F from E and G, or through the small pinions X and Y (shown in fig. 2) on the other side of the engine to the large central pinion Z. Owing to the fact that the cranks are opposed and the flywheels revolve in opposite directions, the engine should be practically perfectly balanced. By setting the cylinders tandem fashion an ideal protected position for the magneto is provided, namely, between the two cylinders.

The two-speed gear, it will be seen, is of a simple type. The wheels are always in mesh, and there is no doubt about the gear getting well lubricated, and the possibility of the oil leaking is exceedingly small.

It is possible to make the counter-shaft M to run through both sides of the crankshaft, so that on one side provision might be made for handle starting. The fact that the shaft N runs about half the speed of the engine enables a very large belt pulley to be used. This engine resembles in some respects the old pattern Lanchester car engine, which had its flywheels geared in a similar manner, but the cylinders were horizontally opposed.

A SOCIABLE PASSENGER VEHICLE.

THE accompanying illustrations are of a sociable which has been built by Mr. A. J. Adcock, of the Handsworth Garage, Crompton Road, Handsworth, Birmingham. The principal features of this model are a 4 h.p. Aster water-cooled engine with thermo-syphon circulation, two speeds by sliding gears in an oil-tight gear box with gear wheels always in mesh. The ratios are 8 and 16 to 1, with a 28in. by 2½in. back wheel.

Transmission from engine to gear box and thence to road wheel is by roller chains, a cone clutch being fitted to an extension of the gear box shaft.

The vehicle is sprung fore and aft, the front axle being on semi-elliptic springs; the rear wheel is provided with a fulcrum lever and coil spring in tension, a device which is said to give excellent results. The braking is well studied, a motor cycle belt rim brake, of which there is none better, being fitted to the rear wheel; this brake can be applied by pedal or side hand lever. A chain passing over a sprocket attached to the steering column conveys motion to the steering arms of the stub axles through the medium of a steel cable, a spring being inserted at each end of the cable where it is coupled to the steering arm. The circular tank at the rear is divided into compartments for the petrol, oil, and water, the radiator being situated underneath the tank. It will be noticed that the engine, etc., is completely covered, side louvres enabling the entrance of air to assist in cooling.

The design will doubtless appeal to those who are interested in a self-contained form of vehicle as apart from a sidecar combination. Readers are now fully aware of the reasons why the rigid tandem tricar type of vehicle has declined and the sidecar combination has to a great extent taken its place.

Three-quarter side and rear views of a sociable passenger vehicle made by A. J. Adcock, of Birmingham. The machine has a 4 h.p. Aster engine, and is sprung at all three wheels.

The sociability and springing of machines of the A.C. type and the one under review largely compensates for the imperfection of three tracks. The springing reduces the vibration arising from the fact that the three tracks seldom, if ever, fitted the inequalities of the road; if the track was made wide enough to fit the usual wheel ruts, the machine was heavy and cumbersome; if made narrow, the wheels were first up on one side and then down on the other.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and should be accompanied by the writer's full name and address.

Overhead Exhaust Valves—A Suggestion.

[5805.]-One bears a good deal at present about the advantages of a mechanical inlet valve placed over the exhaust valve. The objection raised against this seems to be the trouble experienced in having to remove the inlet valve and seating to get at the exhaust valve.

What is the objection to having the exhaust valve overhead and the inlet below? With the exhaust valve in this position such operations as grinding in would be extremely simplified, as both valve and seating could be removed.

MAC.

Steeplechasing on a Motor Cycle.

[5806.]-I should like to draw the attention of your readers to an interesting mishap which occurred to me the other day when riding my 1911 $3\frac{1}{2}$ h.p. Rex.

I was visiting a camp situated in a park, and on leaving the grounds I started my machine on the grass. Not noticing a deep ditch that crossed my path, I was on it before there was time to think! The bicycle entered the ditch (6ft. wide by about 2ft. 6in. deep) and jumped the other bank, landing me safely on the other side. Nothing happened to the machine!

Possibly some other reader has had a similar experience?

VICTOR J. DE SPIGANOVICZ.

Silence.

[5807.]-As a rider of a 1911 N.S.U. I was greatly interested in Mr. Parkes's letter [5776] in which he remarks on the falling off of speed on opening the cut-out of his machine. A friend of mine who rides a similar machine, and myself, have both noticed this peculiarity, but unlike your correspondent neither of us have made a test by speedometer. Nevertheless, the closing of the cut-out causes an increase in speed which is unmistakable.

Will one of the readers of your excellent paper give an explanation of this cut-out effect (which appears to be against all preconceived ideas of the action of a cut-out) and also a remedy for same if possible, as I still wish to retain the open cut-out if beneficial to cooling, etc., of engine, but without the lowering of speed which now occurs.

TOM TIT.

Continental Touring with a Sidecar Attachment.

[5808.]-Having noticed lately on several occasions, motor cyclists touring with luggage, spares, etc., carried on their sidecar frame—the basket being detached—the idea has struck me as being particularly suited to Continental touring, as it enables one to carry a quantity of luggage.

The various big organisations seem to think that such a combination abroad will strike the authorities (French and Italian in my case) as coming under the heading of a light car, and advise me to prepare accordingly.

If any of your readers have taken such a combination as

I mention abroad, I should feel very grateful for a short *résumé* of their experiences, and perhaps they could also tell me if the fact of the luggage being mounted on the actual frame (no springs) in any way detracts from what, otherwise, appears to be a very good idea.

(CAPTAIN) C. A. M. HOWARD.

Formulae in Hill-climbs.

[5809.]-Having noticed in your pages that Professor Callendar's formula has been found by the A.C.U. to be unsuitable, I thought it might interest you to know that the local motor cycle club (in South Australia) found this to be the case some two or three years ago when a certain competitor mounted on a machine of large h.p. would have had to have ascended the hill in question (not an easy one) at over 60 m.p.h. to have won the event.

The committee immediately set to work to rectify this, and the outcome was the following formula:

$$W \\ C \times T^2$$

W = Total weight of machine and rider (in lbs.)

T² = Square of time taken (in seconds).

C = Piston displacement (in c.c.'s.)

For twin-cylinder machines C is taken as 9-10ths of actual.

After being used at all hill-climbs held since it has been found to be very satisfactory. In practice it may possibly not work so well on smooth surface straight hills as on rough tortuous climbs (the former are almost unknown here), but in any case it is a great improvement on the present A.C.U. formula.

The accuracy of this method of working out results is quickly noticed if past climbs which have been run in classes are grouped and calculated as only one class.

With it there is no necessity to have different classes. A competitor on 8 h.p. has just the same chance as one on $1\frac{1}{2}$ h.p.

In the same issue as your leaderette on this subject appeared is the report of a hill-climb of the M.C.C. of South Australia. This was run under the above formula, and as the first two placed men were very evenly matched as regards the personal element and rode machines of same size, the details may be interesting. (See table at foot.)

Personally, I have ridden in hill-climbs without classes under this formula mounted both on low and on high-powered machines with equally satisfactory results.

As I am the originator of the above formula I have taken the liberty to write at length on the subject, and I shall be only too pleased to explain it more fully (if necessary) or discuss its merits per the medium of your columns, but of course there is always the delay of a couple of months in getting replies from Australia.

Trusting that the A.C.U. will consider favourably the advisability of giving this formula a fair trial.

Norwood, South Australia. C. R. CHURCHWARD.

	WEIGHTS.		Gear.	Size of Engine.	Distance.	Time.	RESULT.	
	Machine.	Rider.					On above Formula.	If A.C.U. Formula were used.
Competitor A. (trade rider)	182 lbs.	133 lbs.	4 $\frac{3}{4}$	499 c.c.	4 miles	6m. 44s.	386.7 points	390 points
Competitor B. (amateur rider)	229 lbs.	154 lbs.	5 $\frac{1}{2}$	499 c.c.	4 miles	7m. 26s.	385.8 points	430 points

Continental Touring.

[5810].—May I take up a little of your valuable space to mention that in crossing *via* the Folkestone-Boulogne route Mr. W. L. Grange and myself were charged £1 for the machines only, and that for a 1½ hours' passage. Needless to say, we returned by a different route, and found the Bennett line from Boulogne to Hull more satisfactory; the passage for ourselves was only 7d. each more, whilst our machines cost only 3s. 6d. each. W. FAWCETT.

Hill-climbing.

[5811].—I notice in your issue of August 3rd that a Zenith-Gradua has climbed Bow Brickhill Hill. I believe I was the first rider of a single-gear machine to climb this "bump." I did so in the presence of two witnesses (both motor cyclists, who left their machines near the bottom) in September, 1909, on my 3½ h.p. L.M.C., gear 4½ to 1, and my weight 14 stones 2 lbs.

I can corroborate Mr. Lake's description of the surface of the latter half of the hill. Both times I skidded into the hedge, and almost stopped; it was literally ploughing the sands. The last one hundred yards or so leave the road and run over a track (the surface prevents "rushing"). It is a sporting hill to try, but not one calculated to improve a machine.

Mr. Gazeley, motor agent, of Fenny Stratford, on the main Coventry road, two miles off, is always ready to give directions and information. HAROLD BEVIR.

[5812].—We notice in a paragraph in your issue of August 3rd, on page 802, a suggestion that Amulree has never been climbed with a sidecar (clean ascent). We wish to point out, however, that Mr. F. W. Annandale, of The Vale, Polton, Midlothian, climbed this hill three times one afternoon in competition during the year 1909 on one of our 8 h.p. standard Matchless motor cycles fitted with Mills-Fulford rigid sidecar, his speed being over 20 m.p.h.

Mr. Annandale is at present in Scotland recruiting his health before returning east, and has pointed out to us your remarks. He would have written himself, but is not able to do so at present. H. COLLIER AND SONS, LTD.

[5813].—On Bank Holiday Monday, August 7th, I climbed Matlock Bank on my 3½ h.p. Zenith-Gradua, with sidecar and passenger. I was told by residents there that this was the first time that a single-cylinder machine so loaded had successfully climbed the hill.

I should be interested to know whether this statement is correct. It is just possible that others have climbed the hill without the knowledge of these particular residents.

I might say that Mr. A. E. Catt and other motor cyclists saw me ascend the hill. W. BARRATT.

The Noise of Motor Cycles.

[5814].—I write to ask you to keep up your influence to induce motor cycle riders to pass through villages and towns as quietly as possible. I have the misfortune to live in a village near Portsmouth, through which all traffic to and fro the latter place must pass.

For the last half dozen Sundays we have had a stream of motor cycles passing through the village at hours varying from 3.30-7.30 a.m., all apparently with their cut-outs fully open. Now this state of affairs is quite unnecessary; the noise at this time of the morning awakens people, many of whom are tired after a hard day's work, and in addition to this makes the man in the street object strongly to motor cycles. If an open exhaust is necessary, it simply shows that the design of the exhaust box is wrong, and the sooner the makers recognise this the better. These noisy motor bicycles are keeping more people from joining in the pastime than anything else. If all cars made noises in proportion to their horse-power like the bicycles do, life would not be worth living. My little machine, a twin, opposed cylinders, is practically noiseless, and I should never dream of buying a noisy machine, whether it had done 1,000 miles an hour at Brooklands or had climbed five miles of 1 in 2 in five minutes. Machines can be and should be made silent, and no cut-out should be allowed on the road. This latter abomination is used, as a rule, by the youth who wears his cap peak backwards, and who thinks that, because he is making an objectionable row, he is "doggy" and up-to-date. If makers would only understand that a silent machine appeals to the public, they would, in addition, soon find that

a greater number of the public would take to motor cycling. An additional grumble. Why do makers of motor cycles retain the top tube? It is quite unnecessary (*vide* the Scott), and is only a remnant of the push bicycle days.

A MOTOR BICYCLIST SINCE 1898.

Saddle Comfort.

[5815].—Mr. Vernon Brooks's recent letter "Saddle Comfort" impels me to endorse all he says. I have ridden all the well-known makes, and never on Irish roads could I honestly say I was comfortable, though I always tried to think so. When I bought my new Scott I ordered an XL all pan seat, mainly on Mr. Vernon Brooks's opinion. It was a revelation, and I now ride in absolute comfort and the seat is the admiration of all who see it. It is very easily adjusted.

And a word of praise for the Scott. No one who has not ridden one can realise the comfort, silence, cleanliness, and ease of starting of this machine. The complete water-cooling and semi-automatic lubrication have added enormously to its efficiency. I do not wish to say other machines are not excellent—everyone knows they are—but they will have to be a lot better yet to induce me to desert the Scott. If the quadcar or light four-wheeler is a sound proposition, surely here is the engine, rather than the big four-stroke air-cooled twin or single. (Colonel) H. G. KENNARD.

An Experience of Cornish Roads.

[5816].—I would like to draw the attention of sidecarists to the high camber which prevails on many of the Cornish roads. This is a source of some danger when a motor bicycle and sidecar are taken up a hill too steep to allow of the passenger being carried. I have had narrow escapes from this cause on two occasions. There does not seem to be much trouble so long as one adheres to the left-hand side of the road, but it happened that I had to pass carts on the right-hand side, going uphill with an empty sidecar; when steering on to the crown of the road again, the sidecar wheel left the ground and caused the bicycle to run into the hedge. I have driven right through several counties over a thousand miles without the wheel rising in this way. The only way of obviating this, as far as I can see, is for the driver to steer from the sidecar seat if he has to lighten the load by dropping his passenger.

I recently travelled to the Isle of Man, and would recommend motor cyclists wishing to go from Chester to use the New Ferry at Birkenhead. In this way a very disagreeable road is avoided, and the passenger is landed in Liverpool at the same pontoon, as if he had crossed from Birkenhead itself. The fare for two persons, motor bicycle, and sidecar totalled to 7d. only. F. TRAFFORD.

**THE LUGGAGE-CARRYING PROBLEM.**

F. Ellmore (3½ h.p. Triumph) after completing a non-stop run from Beachy Head to Leicester. He tells us that numerous people expressed surprise at the quantity of luggage it was possible to carry, secured to one side of the machine. The bags and contents weigh approximately 120 lbs.

An Explanation.

[5817.]-I find that a number of people imagine my tyre troubles in the Scottish Trials were experienced with Kempshall covers, and in justice to Kempshall Tyres, Ltd., I should be glad if you will allow me to explain.

The Kempshall non-skid on my back wheel was in perfect condition when my carrier broke and cut it in half. Being unable to obtain a spare Kempshall cover at Aberfeldy, I fitted a rear cover of another make. B. H. DAVIES.

Six Days' Lightweight Record.

[5818.]-I notice in last week's issue of *The Motor Cycle* that a Mr. Redding, in letter 5794, speaks of Mr. H. V. Swift "looking after his own machine, not as in the case of an effort made since, having a couple of assistants to do it." As I am the only rider who has succeeded in beating Mr. Swift's lightweight six days' record, the writer seems to refer to me, and I beg to inform Mr. Redding that I had no assistants or help, and that my machine required no "looking after." JAMES MERTON.

Reliability Trial in North Devon.

[5819.]-I have just read with considerable interest the account of the North Devon reliability trial just held, and would like to correct a little misunderstanding in your columns. The Eastbourne Private Motor Tourists organised and carried out a reliability trial in North Devon and Cornwall, and an observed hill-climb on Porlock Hill, last Easter, which were reported in the motoring press. In the climb half of the competitors made the ascent of Porlock, one a single-gear Triumph, and the remainder took the new road to Oor Post. During the trial members of the party on single-gear machines made clean ascents of Barbrook Mill Hill, Lynmouth Hill, and Beggar's Roost.

I shall be glad if you will make this correction on behalf of the E.P.M.T., as I think we are quite the first to conduct a 600 miles trial through that country.

CAPTAIN E.P.M.T.

Hill-climbing.

[5820.]-Regarding the Stelvio Pass I wrote about last week, this pass requires no exaggeration to do it justice, so I should esteem it a favour if you would correct a little misprint, no doubt due to my sending the particulars written with a blunt pencil. The hairpin bends number forty-eight on the ascent and a similar quantity on the descent, which is in Italy. The distance up is sixteen miles, rising from under 3,000 feet to over 9,000 feet, and giving an average gradient of 1 in 13 for the sixteen miles. The letter was sent from an hotel about halfway up, where we spent half an hour imbibing something wet and cold. We, however, did reach the top after having about five stops, three of which were failures, chiefly owing to trying to take some of the corners at over six miles an hour. I may say that I do not think I could ride straight up, even if I had a machine geared 20 to 1 and water-cooled, as I should certainly "fozzle" at least one of the forty-eight corners. W. FAWCETT.

The Question of Water Cooling.

[5821.]-In your issue of July 27th I noticed an article about water-cooling on motor cycles. Although I do not possess a machine, the articles published in *The Motor Cycle* have furnished me with a good knowledge of motor cycles and some of their chief defects.

Disregarding for the moment the favourite old troubles of tyres and belts the motor cyclist's great foes are, to my mind, overheated engine, conking, and sooted plug. Now it seems to me that on the water-cooled engine these troubles are practically done away with. Is this alone not worth the extra weight?

It is certainly strange, but nevertheless true, that a great 30 to 40 h.p. car makes less noise than an insignificant 3½ h.p. motor cycle. How beautifully smooth these cars run, too. If makers could get motor cycles to run as quietly and smoothly as a car, I think that motor cycles, in spite of their present popularity, would become more popular. If water-cooling reduces noise, this is another great point in favour of its adoption. How often I have heard exclamations of disgust at the noise of passing motor cycles, and they have been new ones, too. How often have I and others been surprised at the ease with which a car starts and glides

noiselessly away. Then, again, if water-cooled engines run cooler than air-cooled, does this not mean less oil? And if the efficiency is increased, does this not mean less petrol consumption?

To my mind, the most perfect motor cycle would be a four-cylinder water-cooled one, with either chain or shaft drive—as near approaching a car as possible, the weight being its only drawback. R. GROSE.

Silence—A Sidecar Suggestion.

[5822.]-Having read your leaderette on the first page of last week's issue, which deals principally with silence, I would like to make known my own experience.

I have a large 8 h.p. J.A.P. combination, and thought at first of having an auxiliary silencer fitted attached to the sidecar, such as you suggest, but before resorting to this somewhat clumsy makeshift I was persuaded to fit a silencer made by Harry Reed, of Dot Motors, Manchester, and have done so with the greatest benefit, for with cut-out closed it is impossible to hear the engine explosions. The only noise to be heard is made by the valves clicking. There is apparently no back pressure whatever, for the engine runs as fast and as cool with the cut-out shut as it does with it open. I might add that the latter attachment is a splendidly thought out arrangement. ERIC LONGDEN.

Compression Ratio for Racing Purposes.

[5823.]-Through the medium of your valuable paper, I should like the experience of other readers on the following points. I have been using a well-known make of twin 7 h.p. for competition work this year, and have been puzzled that the compression seems to be only 40 to 60 lbs. per square inch. I am assured by the makers "that this is quite as high as I can expect," but it strikes me as being very low for racing purposes. I have used an Amac carburetter, which I consider an excellent one, but I find that unless I pass hot air through it moisture collects along the outside of the inlet pipes, and the engine "hunts." It seems curious that this should be so, as Collier uses a similar carburetter on his Matchless, and mine is placed between the cylinders, as in his case. I have also found that the exhaust valves pit badly, especially on the front cylinder, and I should be extremely grateful to anyone who could recommend a make of valve that would stand up to the work. Someone else's experience would be very welcome. SAPPER.

We have received a copy of a long letter written by Mr. Hugh Gibson to the A.C.U. Committee concerning his suspension in connection with his recent End-to-end sidecar record. In it, he points out that although his average speed was twenty-three miles per hour, three-fourths of the journey was on practically deserted roads, and he was never cautioned or challenged by a single policeman.

He lays particular emphasis on the fact that all the Six Days' Trials competitors exceed the legal limit regularly, and Mr. Gibson considers there is much less danger to the public in an End-to-End ride than there is in a six days' trial.

New Models in the Trials. 3½ h.p. Steelhouse-Precision. This machine, which is being ridden by V. Busby, has a Brampton variable gear.

MECHANICAL DETAILS OF THE SIX DAYS' TRIAL MACHINES.

NEARLY all the competing machines in this week's A.C.U. 1,000 miles trial are standard in every respect, and even in the exceptions it is generally only in minor details that any departures have been made. We describe and illustrate below the amendments in design, which will, in most cases, appear on 1912 models.

Scott.

A neat device has been incorporated in the carburettor, which is intended to allow the engine to take the fullest

Fig. 1.

possible charge of gas. This device consists of a small lever attached to the swivelling jet cover, as shown in fig. 1, which can be operated by hand, and, in consequence, the air inlet can be added to by the area of the orifice through which the jet is inspected. This hole is some 3/16 in. in diameter, and its opening allows a somewhat larger jet than usual to be employed. The cover is attached to a knurled collar, which fits round the base of the inlet pipe, as shown.

A rather more important detail is the new method of regulating the supply of oil delivered to the engine by the small automatic pump, which is embodied, as described in previous issues of *The Motor Cycle*, in the crankshaft bearings. In

Fig. 2.

previous machines the delivering of lubricant could only be adjusted by the introduction of oil nipples of different sizes, and as this could not be done whilst the machine was being ridden, the oiling system lay under certain disadvantages. These have now been done away with in

Fig. 3.

a very neat and ingenious manner, which has the very admirable feature of introducing practically no extra complication. The arrangement is as follows:

The pump spindle carries below the leather washers a small extension which

Fig. 4.

bears against the head of a small mushroom valve situated between the gauze filter of the oil inlet and the ports through which oil is fed to the crank chambers. This small valve is held off its seating by a spring, and thus opens to the fullest extent when the pump

Fig. 5.

plunger is withdrawn. When the plunger is "home," i.e., with its small bayonet pin tucked under the lid of the pump barrel, the valve is open to a certain extent, and the feed to the oil pump is taken through it. A small folding handle is fitted to the barrel cap, and as the latter is screwed, rotation of this cap

Fig. 6.

causes the plunger to be lifted up or depressed as the case may be. Thus, when the barrel cap is screwed down it carries with it the pump spindle and its extension, and the last-named, pressing upon the valve, decreases the supply of oil permitted to the pump. This neat device entirely overcomes the disadvantages to which the pump-feed is prone.

Another new point in the Scott is the employment of lugs brazed on to the down tubes for the purpose of securing the honeycomb radiator. Previously this was held in position by a couple of clips, which, however, over very bumpy roads had a slight tendency to allow the whole affair to slip. The new arrangement is illustrated in fig. 3.

Fig. 7.

Alcyon.

Fig. 4, which is practically self-explanatory, shows the new brake pedal fitted to the Alcyon machine. It is

Mechanical Details of the Six Days' Trial Machines.—

carried out in the simplest possible manner, and is particularly effective when the necessity arises for brake adjustment. The hole in the pedal lever through which the valve is passed is coned out so that the angularity of the lever puts no lateral strain upon the rod.

N.S.U.

Fig. 5 illustrates a very ingenious method by which the N.S.U. two-speed gear has been provided with an adjustable pulley on Mr. H. J. M. Hughes's sidecar. The outer pulley flange is, of course, owing to the arrangement of the gear, not available for this purpose, and the adjustment has therefore been incorporated in the inner flange. As shown in the illustration, this flange abuts against a castellated ring working on a left-hand thread, and pulley adjustment is very easily effected with a tommy bar inserted into one of the castellations. The device is so neatly carried out that it scarcely makes any appreciable difference to the appearance of the gear, and we are informed that in practice it gives most excellent results, and that in future it is likely to become a standard fitting on N.S.U. machines.

P. and M.

Two new fitments have been put on the P. and M. machines. They consist of a silencer cut-out and a front wheel stand. The first is illustrated in fig. 6, and is quite a small contrivance attached to the rear end of the silencer. There are two end plates, each of which has four holes, and, whilst the inner one is fixed to the silencer shell, the outer one is rotatable

by means of a ratchet operated by a small pedal. The ratchet is so arranged that the thrust upon the pedal makes the cut-out alternately "on" and "off." The

front wheel stand, which forms an exceptionally neat fitting which is well out of the way until required, is shown in fig. 7. It is pivoted to the footrest bearer in front, and in the rear is, when out of use, clipped to a small lug on the silencer.

Matchless.

Mr. J. Tassell has fitted a novel kind of exhaust valve lifter to his 8 h.p. Match-

less-Jap, which is illustrated in fig. 8. As will be seen, the Bowder wire is conducted through an elbow tube fixed in a lug brazed on to the inlet pipe. The distribution of lift to the exhaust valve levers is accomplished through a branched piece of cycle chain, and the result is a saving in friction and an easiness in operation that is quite remarkable. In fact, in

Fig. 9.

spite of the strong springs, the exhaust lift lever can be held up almost with the pressure of a single finger.

L.M.C.

The new type of sight feed oiler fitted to Slaughter's L.M.C. is shown in fig. 9. It operates on a similar principle to that of the J.A.P. drip feed oiler, but owing to the glass dome there is no impediment to its being clearly visible under all conditions. The thumbscrew at the side allows the drip to be adjusted when riding.

CLIMBING SHEFFIELD'S STEEPEST HILL.

F. Dover, of coast ride fame, added yet another laurel to the records he has made on his $3\frac{1}{2}$ h.p. Premier. Last week he climbed Turner's Hill, which has a gradient of 1 in 3, and a surface made up of round cobble stones, and is crossed every ten feet by a gutter running at right angles across the same. Mr. Dover's machine now has an Armstrong three-speed gear. The first attempt was a failure, owing to Mr. Dover letting down the stand of his machine to act as a sprag in the event of the engine failing, but in crossing the second rise—a gutter face—the side of the carrier caught in the nick of a boulder and broke, the side mounting up into the back wheel and throwing the rider over the front. The second attempt proved successful, the speed of the machine being about twelve miles per hour. Mr. Shepard Sawyer, riding a similar machine to Mr. Dover, also made the ascent, and his time was the same as Mr. Dover's. Both are riding their machines in this week's 1,000 Miles Trial.

CUMBERLAND M.C.C. RELIABILITY TRIAL.

A trial from Bassenthwaite to Harrogate for a cup and gold medal took place on August 6th. There was a heavy downpour of rain on the outward journey, and only three checked in at Kendal. The ultimate winner proved to be H. Robinson ($3\frac{1}{2}$ h.p. B.S.A.), two marks lost. W. W. Beck ($3\frac{1}{2}$ h.p. Triumph) being second.

Fred Dover, the coast rider, climbing Turner's Hill, Sheffield, on his $3\frac{1}{2}$ h.p. three-speed Premier. This hill has a gradient of 1 in 3 and, as will be seen, the surface is composed of rough cobble stones. Dover's ascent was the first on a motor cycle.

SIX DAYS

HARROGATE
AS A CENTRE

RELIABILITY TRIALS

Preliminary Preparations.

THIS is written on the eve of the great trial after a busy morning's work. The Clarendon Hotel yard from breakfast to lunch time was full of machines, most of which were undergoing tuning operations, and even at an early hour competitors were putting finishing touches to their mounts, seizing the last few moments that remained, after the lapse of which the time for attention is

The competing machines being examined by the judges in the Clarendon Hotel Yard, Harrogate, the day before the start.

all too limited. Tuning, however, was quite a side line in the morning's work, as the chief duties of the officials were to examine and seal, seal in the blazing sun.

The hotel yard is capacious enough, but lock-up accommodation was scarce, quite as scarce as sleeping apartments, which, in Harrogate, are well nigh impossible to get. The A.C.U. has made a mistake this year in holding the trial so late, as Harrogate is at the height of the busiest season it has had for many a long day. Mr. Nisbet, the ever active and able clerk of the course, was occupied in superintending things generally in his businesslike way. Mr. Sharp, the highly technical judge, was going over each machine in detail, and seeing if it conformed to the official requirements. Most machines did so, and Mr. Sharp told me that his task had been a simple one. There were a few exceptions, however.

Details for Attention.

N. D. Slatter's Alcyon exhausted directly on the ground, which was contrary to regulations, so he had to alter things by covering up the offending holes and drilling fresh ones. Finn's Enfield had a broken carrier, and a couple of chipped radiating fins, damage which had been sustained on the railway. These points were noted so that his record in the trial might not be impaired. Piggott, riding a 6 h.p. Zenith, had no number-plates and no lamp, as he had been touring about the country and had not seen the final regulations. He was told to find number plates, and the machine was allowed to be sealed. Immediately after Messrs. Sharp or Brooker had examined a motor bicycle it was handed over to the sealers, who worked with a will all the morning. Messrs. Ross, Gibson, Abbott, and Boileau were among those

who were busy with seal, wire, and pliers. By lunch time nearly every machine had been examined, sealed, and stored away, and the following men were found to be missing: H. H. Bowen (4 h.p. Bat), A. J. Stevens (2½ h.p. A.J.S.), D. R. O'Donovan (3½ h.p. Singer), G. Riddiough (3½ h.p. P. and M.), and E. B. Ware (Chater-Lea and sidecar). Of these Bowen was badly hurt in an accident, and had to spend several days in a cottage in Keighley; Riddiough is a non-starter.

F. Smith has been ill but arrived in time for the start on Monday. Most of the machines are of standard design, there are a few newcomers (most of which we illustrate), but of the well-known makes entered only detail alterations are to be noticed. These are dealt with in a separate article in this issue, illustrated by line drawings.

Monday's Run, 177½ Miles.

The start of the first day's run of the Six Days' Trials was made punctually at eight o'clock on Monday morning, Mr. J. R. Nisbet being the official starter. The machines were arranged in a very businesslike manner round the large yard of the Clarendon Hotel, and as they were in numerical order and had to pass practically one by one through the bottleneck entrance to the yard, there was no hurry or chaos, but just a steady stream of competitors. The machines left in groups of four at intervals of one minute, so that the eighty odd competitors were cleared in about twenty minutes. The non-starters were H. H. Bowen (Bat), D. R. O'Donovan (Singer), George Riddiough (P. and M.), A. P. Mamice (Premier), and E. B. Ware (Chater Lea &c.)

The list of starters, together with a specification of their machines, is given on the next page, from which it will be noticed that practically every well-known make is represented. There were seventy-seven starters, made up as follows: Single-cylinders, 53; twin-cylinders 24. Motor bicycles, 72; with sidecars, 4, and one self-contained passenger machine.

The popularity of belt transmission is shown by the number of machines fitted with this form of power conveyer, 57 being so supplied. Chains were noticeable on 16, and 4 were both belt and chain driven. There are no gear driven machines in the trials, unfortunately. Out of the grand total 58 have variable gears and 19 a fixed ratio.

New Models in the Trials. 3½ h.p. Invincible-Jap, chain driven. This machine is fitted with a V.S. two-speed gear—4½ and 9 to 1. The rider is F. Banks.

The A.C.U. Six Days' Reliability Trials.—

Scenes at the starting point. The competitors were sent off in groups of four. Mr. F. Straight will be noticed on the right of each picture, note-book in hand.

First Day, Monday.

Circular run from Harrogate *via* Thirsk, Byland Abbey, Wass Bank (observed hill), Helmsley, Pickering, Whitby, Saltburn, and back *via* Stokesley and Sutton Bank. 177½ miles.

The first day of the great Six Days' Trial was gloriously fine, though in the early hours a mist hung over the country, which cleared off about an hour after the start. On leaving the headquarters, I turned to the left, following part of the Spring Quarterly Trials route. I was mounted on a 3½ h.p. Scott, kindly placed at my disposal by the Scott Engineering Co., which glided along the road in a delightful manner, and later proved itself to be a good hill-climber as well as a most comfortable machine. My companion was Mr. H. W. Fortune, hon. secretary of the Harrogate club, and it was our intention to get well ahead of the competitors and arrive at Wass Bank in good time.

Some few miles from Boroughbridge, whence Fortune struck off on a short way of his own, we stopped for a moment, and after the restart my companion disappeared round a corner, and in a minute I was wondering which of four cross roads he had taken. However, after seeking help from a map and a couple of countrymen, Coxwold, nestling at the foot of the Hambleton Hills, hove in sight, while behind it was the Great White Horse, a well-known, and for me a welcome, landmark for miles around. Just after the village a diminutive water splash had to be negotiated, and a few minutes afterwards that glorious old ruin, Byland Abbey, came into view. Wass Bank was now at hand, and at its foot was Mr. Nisbet's car, bearing Messrs. Ross, Brooker, and McDonald.

The hill, the first to be observed on the day's run, was somewhat disappointing, Sutton, I knew, and Greenhow, I knew, having climbed the latter twice the day before, but save for a hump in the middle of about 1 in 5 there was nought to cause anxiety, save the wicked surface, furrowed with water courses running transversely across the road.

As regards the climb, it is necessary and right to assume that the modern motor bicycle, if well driven (and I am sorry to say some of those competing were not), is a good hill-climber, so I propose only to deal with the really interesting features of the event.

Robbins (3½ h.p. Humber) was very slow, Colver (2½ h.p. Enfield) was missing fire and eventually stopped, Grout (2½ h.p. Douglas) engine missing, and rider had to pedal fairly vigorously, as later one cylinder failed altogether; however, he reached the top. Crickmore (2½ h.p. Premier) and Slatter (2 h.p. Alcyon) were other unsuccessful competitors; while Greaves (2½ h.p. Enfield), who had the same trouble as Colver, was another companion in trouble.

Just at this time an official car appeared, choosing a very inopportune moment at which to climb the hill. G. T. Gray (3½ h.p. Rudge) and B. H. Davies similarly mounted, both

skidded in a rut at the top of the hump. Sam Wright (2½ h.p. Humber) was conspicuous on account of his machine's silent running. Slaughter, on his single-gear L.M.C., made light of the bank; while those fine old veterans of early days, T. Silver and F. W. Applebee (3½ h.p. Quadrants, single-gear) made good ascents. Finn (2½ h.p. Enfield) stopped with plug trouble, while Newsome's 3½ h.p. Triumph jolted the throttle wire off the carburettor and stopped, but its clever rider made a wonderful restart on the 1 in 5 by means of his clutch alone. Hughes (6 h.p. N.S.U. and sidecar) was another unfortunate, as he broke his belt less than halfway up the hill.

On to Helmsley and from thence to Pickering there was nothing to trouble the men. Abbott had a puncture near Wass, but stoppages were few and far between. Some fine moorland country had to be traversed over which a sea fog hung thick and heavy, and it became somewhat cool. Blue Bank was descended, an observed hill in Wednesday's route, and most of the riders took considerable interest in it.

The Fun Begins.

But it was after Whitby that the fun began. First of all a good steep hill had to be climbed to get into the town, and then the road was narrow and hilly, turn succeeding

G. L. Fletcher (2½ h.p. Douglas) plunging through a water splash near Coxwold.

The A.C.U. Six Days' Reliability Trials.—

turn, and hill succeeding hill. Sandsend toll gate was left open by arrangement, and then after negotiating the coast road with its pretty glimpses of cliff scenery Lythe Bank was reached. Here several dismounted, among whom was R. C. O. Wills (3½ h.p. Bradbury), who was obstructed by a dog. Afterwards Hinderwell Boulby Cliff came into sight, but the competitors left it for the main road to Loftus, which was a pity as it is a stiff climb. The rest of the morning's run ended with the zig-zag climb up to the Zetland Hotel, Salthurn, and many complained of its severity. After haggling over petrol, the arrangements for distributing which were chaotic, the men enjoyed an excellent lunch, and then set out for Thirsk via Guisborough and Stokesley.

For many miles B. H. Davies, W. Cooper, and Colver were my companions. Eventually Sutton Bank was reached, and at the foot a large assembly congregated to cool their engines and make a few adjustments. Sutton Bank is a good deal stiffer than Wass, so the number of failures was slightly greater. Early in the procession a car stuck quite low down, but was soon put to one side. Parker (3½ Scott) was the first man to dismount. Colver (2½ Enfield) appeared to let his low speed clutch slip. Finn (2½ Enfield) dismounted. Jameson (3½ Zenith) was baulked by a competitor and failed to make a clean ascent, while poor Holroyd (2½ Motosacoche) was also brought to a standstill. Robbins (3½ Humber), Abbott (3½ Bradbury). Silver (3½

Quadrant), Tassell (8 Matchless and sidecar), Ruscoe (2½ Forward), Woolley (3½ L.M.C.), Slatter (2 Alcyon), and F. A. Applebee (3½ N.S.U.), all shared a similar fate. Crickmore (2½ Premier), pedalled.

The remainder of the journey through Helmsley (check), Oswaldkirk, Easingwold, Boroughbridge, and Knaresborough, presented no difficulties. At this early stage of the run there have been several retirements. A. D. Arter (3½ James) through a broken connecting rod at the foot of Sutton Bank, Piggott (6 Zenith-Gradua) through his machine being generally out of tune, and Hughes (6 N.S.U. and sidecar) through failing to climb Sutton Bank.

Official Results of First Day's Run.

The following is an official list of riders who failed on Sutton and Wass Banks:

SUTTON BANK.—Mills, Robbins, Abbott, Cooke, Wilberforce, Parker, Finn, Arter, Ruscoe, Busby, Applebee, Creyton, and Tassell. Burney was not observed.

WASS BANK.—Colver, Greaves, Banks, Dixon, W. F. Newsome, and A. Clark.

BOTH SUTTON AND WASS BANKS.—Crickmore, Woolley, Slatter, J. S. Holroyd, and Hughes.

Marks were lost on Monday by the following: Robbins, 22; Wilberforce, 24; Fletcher, 3; Burney, 33; Banks, 87; Castagnoli, 36; Stevens, 5; Crickmore, 6; A. Clark, 4; Slatter, 5; Applebee, 11; J. S. Holroyd, 9; and Grange, 18.

PASSENGER MACHINES NEARING THE SUMMIT OF WASS BANK, THE FIRST OBSERVED TEST HILL.

(1) J. Tassell with his 7 h.p. Matchless sidecar.

(2) O. C. Godfrey (7 h.p. Indian sidecar).

Second Day, Tuesday.

Tuesday's run started in fine, dull weather, which turned into glorious sunshine. At midday all left Harrogate except those stated to have retired in yesterday's report, but Crickmore (2½ h.p. Premier) and Banks (3½ h.p. Invincible) have to be added to the list of withdrawals. The beginning of the run was over ordinary country, which became prettier as we penetrated farther into the wilds, but the most remarkable feature of the route was the number of villages in which there were steep hills, the negotiation of which called for a good deal of skill. After Leckburn the road mounted steadily, but the surface was good, as it had been all the morning; in fact, the going, save for at times too many corners, was perfect. Suddenly, without any warning, the beginning of Arkengarthdale Hill—the pass over the moors—was encountered. The observed portion was quite short, and consisted of a bridge, after which the road turned sharply at right angles, then ascended with a gradient of about 1 in 7, finishing with a somewhat severe turn, after which the hill became easy for some distance. The surface was covered with loose granite, rough as any Scottish acclivity. The first to ascend were Philipp and Parker, who did well, but Baker, whose engine suffered loss of crank case compression through a blowhole in the casting, had to assist the machine by heeling the ground with one foot. Stevens came up slowly, but his colleague, Heaton, managed better. Moffatt came up with his stand down, which he cleverly kicked up again. Finn was the first man to have to dismount. Holroyd came up well with pedal assistance. Busby dismounted. Slaughter came up well, but was rather hampered by Haslam. Davies

made quite a sensational ascent, flinging the stones far and wide.

Eggington dismounted and baulked Wilberforce, who cleverly slipped in between him and the edge of the road. Slatter skidded at right angles in the loose stones, but made a smart recovery and a clean ascent. Applebee dismounted and let his machine fall. Silver also dismounted. The remainder ascended the hill in a highly satisfactory manner. Of passenger drivers, Godfrey, F. Smith, and Morgan came up particularly well; the hill, however, was quite a detail in the morning's run, for much worse was to follow. A mile from where I stopped to observe the men the surface suddenly deteriorated, and for many a mile was in an appalling state—so loose and rutty that even on the level and downhill those who had low gears were glad to make use of them. How the lightweighters stood it no one knows, but evidently it will teach the makers how to build colonial models. Part of the road was grass-grown, but that was a quite unimportant detail. In the midst of it all I came upon poor Morgan, whose two-seated runabout had been performing so well. He was put out of the running by a broken chain which could not be repaired in time. The descent from the moorland road into the valley revealed some glorious scenery, the whole country looking beautiful in the bright sunshine, but it was indeed good to have left that terrible road. Scarth Nick, so I am told, is both rougher and steeper than what we have had this morning, but how we fared thereon shall be related next week. Kirkby Stephen was reached about a quarter past twelve, and here lunch was served at the King's Arms Hotel.

SPECIAL FEATURES

**THE SIX DAYS' TRIALS: HARROGATE AS A CENTRE.
SEVERAL NEW MODELS.**

THE N.W. LONDON M.C.C. TOUR TO LYONS.

An Attempt to Abolish the T.T. Races.

A section of the industry which is opposed to racing is endeavouring to obtain promises from all the firms which have previously engaged in the T.T. Races to hold themselves aloof from next year's events. Should they be successful it will mean that to amateurs alone will be left the task of trying to win back the Trophy which is now held by an American machine.

Coventry Club's Annual Open Climb.

The sixth annual open hill-climb of the Coventry and Warwickshire Motor Club is fixed to take place on Saturday, September 2nd. This event is always among the most important of the year, and a record entry was received for the last event. Six classes are down on the programme as follows:

1. Single-gear single cylinder touring. 2. Lightweights. 3. Tourist

CLIMBING SALTBURN BANK ON THE FIRST DAY OF THE SIX DAYS' TRIALS.

Trophy machines fixed gears. 4. Ladies. 5. Single-gear multi-cylinder touring. 6. Variably geared touring.

Entry forms and full particulars will be ready this week, and copies may be obtained from the hon. sec., Mr. Geoffrey Smith, 19, Hertford Street, Coventry.

The Six Days' Trials.

To lovers of statistics the subjoined table of percentages may be interesting as showing in as brief a form as possible the percentages of the different types of machines, gears, etc., employed in the Six Days' Trials:

Single-cylinders	...	68.83%
Twin-cylinders	...	31.17%
Motor bicycles	...	93.51%
Sidecars	...	5.20%
Runabouts	...	1.29%
Belt drive	...	72.73%
Chain drive	...	22.07%
Belt and chain drive	...	5.20%
Variable gears	...	76.62%
Fixed gears	...	23.38%

M.C.C. Reliability and Brake-testing Trials.

The results of the M.C.C. reliability hill-climbing and brake-testing trials are:

Winner of Mrs. Jarrott's prize.—W. Pratt (3½ h.p. P. and M.), who also won a gold medal.

Winner of cup presented by Mr. H. F. Hull.—No award.

Winners of silver medals.—E. Kickham (2½ h.p. Douglas), G. L. Fletcher (2½ h.p. Douglas), Eli Clark (2½ h.p. Douglas), and Rex G. Mundy (3½ h.p. T.T. Triumph).

Winners of bronze medals.—E. Pond (3½ h.p. Rudge), P. H. Bentley (3½ h.p. Triumph), R. B. Clark (5 h.p. Indian), F. C. Wasley (2½ h.p. Douglas), and F. Smith (5-6 h.p. Clyno and sidecar).

Hill-climbing.

J. N. Longfield (3½ h.p. T.T. Triumph) won the Ilkley and District M.C. hill-climb last Saturday.

A. L. Ommaney on a variably-gear Rudge made an observed climb of the Wrekin last Tuesday.

Six Days' Trials, Routes.

The routes for the remaining three days of the trials are:

THURSDAY.—Leave Harrogate, Knaresborough, Boroughbridge (check, 37 miles), Greenhow Hill (observed hill), Grassington (check, 67 miles), Settle (84 miles, lunch at Commercial Hotel), Horton-in-Ribblesdale, Aysgarth (check, 115½ miles), Kidstones Pass (observed hill), Bolton Bridge (check, 148 miles), Harrogate (177 miles).

FRIDAY.—Harrogate, Wetherby, Tadcaster, Otley (check, 35½ miles), Ilkley, Heaton Woods (observed hill), Haworth, Colne (check, 71½ miles), Settle, Hellifield, Burnsall (check, 113½ miles, lunch at Fell House Hotel), Brown Stay Ridge (observed hill), Masham (check, 137¼ miles), Thirsk, Boroughbridge (check, 162½ miles), Harrogate (check, 172¾ miles).

SATURDAY.—Harrogate, Harewood, Selby (check, 33¾ miles), Great Driffield (check, 73¼ miles), York (check, 101¼ miles, lunch at Royal Station Hotel), Wetherby, Harrogate (check, 124¼ miles). Total, 1,012¾ miles.

(1) J. H. Slaughter (3½ h.p. L.M.C.) at the top corner.

(2) J. Baker (3½ h.p. Triumph) rounding the same corner.

(3) H. V. Colver (2½ h.p. two-speed Enfield).

The London Strike.

During the strike last week a motor cycle carrier owned by the Great Western Railway Co. was smashed up by the strikers.

Stolen Machines.

We are informed by Mr. Robert Coleman, 22, Ashdale Road, Terenure, Dublin, that his $2\frac{3}{4}$ h.p. Model E Douglas, engine No. 1993, was stolen from the above address on July 30th. The registration No. is IK 473.

Belgian Road Race.

The result of the Belgian motor cycle race, held on the 6th inst., is that Sarellea machines finished first, second, and third. The result was decided on a formula, $P \times C$

$\frac{V}{C}$, P being the weight of rider and machine, V the speed in metres, and C the cubical capacity.

World's Record Speed.

The fastest speed yet accomplished on a motor bicycle of any power now stands to the credit of an Englishman, C. R. Collier last Saturday annexing three records and attaining a speed of 91.37 m.p.h. The natural question is, why did not Collier attain such a speed in his match with de Rosier? The answer seems to be that C. R.'s J.A.P. engine had only had one week on the road prior to the international match, but is now getting run in. Who said it is not in the air, but in the engine?

British Imports of Motor Cycles.

The imports of foreign motor cycles during July compared with previous years were:

	1909.	1910.	1911.
Motor cycles—	£3,578	£4,090	£2,971
Parts thereof—	£4,799	£4,622	£7,267
	£8,377	£8,712	£10,238

For the seven months ending July 31st the figures show a steady increase. The values were:

	1909.	1910.	1911.
Motor cycles—	£27,202	£31,064	£31,499
Parts thereof—	£16,535	£32,966	£40,680
	£43,737	£64,030	£72,179

British Exports Increase Enormously.

The exports for last month are given hereunder:

	1909.	1910.	1911.
Motor cycles—	£4,388	£9,642	£24,411
Parts thereof—	£2,376	£2,358	£5,249
	£6,764	£12,000	£29,660

During the seven complete months of this year our exports have increased over 100% compared with the corresponding period of last year. Details:

	1909.	1910.	1911.
Motor cycles—	£24,202	£53,661	£120,289
Parts thereof—	£18,893	£21,364	£35,642
	£43,100	£75,025	£155,931

Track Racing at Cambridge.

The results of the three races at Cambridge Mammoth Sports on the 8th inst. are:

Five Miles Open Handicap.—1, Harry Martin ($2\frac{3}{4}$ h.p. Martin-Jap); 2, Storey ($2\frac{3}{4}$ h.p. Caeco); 3, P. V. Wallis ($2\frac{3}{4}$ h.p. Vin). Time, 8m. 44 $\frac{3}{4}$ s.

Three Miles Open Handicap.—1, Harry Martin ($2\frac{3}{4}$ h.p. Martin-Jap); 2, P. V. Wallis ($2\frac{3}{4}$ h.p. Vin); 3, F. W. Dayrell ($2\frac{3}{4}$ h.p. Martin-Jap). Time, 5m. 15 $\frac{3}{4}$ s.

FUTURE EVENTS	
Aug. 26—	Mersey M.C. Open Hill-climb.
Sept. 2—	M.C.C. Members' Hill-climb.
" 2—	Coventry and Warwickshire M.C. Annual Open Hill-climb.
" 9—	Torrey M.C.C. Annual Open Hill-climb.
" 16—	Auto Cycle Union Inter-club Championship, in the Midlands.
Oct. 12—	The Motor Cycle Special Colonial issue.
" 14—	A.C.U. Quarterly Trial (Midland centre) fourth and last of 1911 series.

Five Miles Open Scratch Race.—1, Harry Martin ($2\frac{3}{4}$ h.p. Martin-Jap); 2, P. V. Wallis ($2\frac{3}{4}$ h.p. Vin); 3, F. E. Barker ($2\frac{3}{4}$ h.p. Brooklands). Time, 8m. 44 $\frac{3}{4}$ s.

A somewhat unusual accident occurred in the final of the last race. H. Potter had his left foot jolted off the footrests and caught in the belt, partly locking the wheel and causing his machine to skid. Both rider and machine dashed into the crowd, and a lad was knocked down and injured. Potter escaped with a few bruises and a sprained finger.

A three lap scratch obstacle race in which competitors had to change plugs and bol for apples, resulted in a win for W. Chitty (J.A.P.), who was very smart in changing plugs. Dayrell (Martin) was second, and W. Hodgkinson (J.A.P.) third.

B.M.C.R.C. Brooklands Meeting.

The next meeting of the B.M.C.R.C. will take place at Brooklands on Saturday, the 26th inst. We understand that there was some grumbling at the prices charged for admission at the last meeting, on the occasion of the de Rosier-Collier matches, but the expenses of running this meeting on account of the amount of the prize money were very great, and when the accounts were settled up the club was only 1s. 5d. to the good. At the meeting next week the usual charges will be in vogue, namely, 1s. per head, and no charge will be made for machines. The events are: 3 p.m., the Second 1911 Time Trials. 4 p.m., the Omniclass Hour Race.

Serious Bridge Complaint.

Communication ways between Lancashire and Cheshire are all too few, considering the thousands of cycle, motor cycle, and car users who ride out of the former county into the other, the latter having attractions in the shape of far superior roads. The pretty village of Lymm is a very popular resort for wheel travellers between the two shires, but it has narrow and tortuous approaches, and streets that demand careful going. Hard by the old village, on the Warrington side, is a bridge of the type that is most strongly condemned by all motor cyclists; indeed, the C.T.C., N.C.U., A.C.U., and A.A. and M.U. ought to unite in protestations. The bridge is only wide enough for one vehicle, and has a hump which prevents traffic on one side seeing what is coming up the other side of the hump. Cars and motor cycles must be rushed over, if they are to surmount the top bit of 1 in 4 or 5 gradient, and should two vehicles meet it is only by a violent application of brakes that a smash can be avoided. It may be argued that road users from each side ought to sound their horns freely. Even so, the antiquated bridge wants replacing with something up to date, and a constant source of public danger permanently removed.

**THE GREAT LONDON STRIKE.**

The above is a scene outside the Smithfield meat market. The carmen would not return to work until all the other strikers had had their grievances settled, so an enterprising butcher utilised his twin Rex motor cycle and sidecar to carry his supply of meat. He is seen loading up the sidecar with sheep.

THE NEW TWO-SPEED BRADBURY.

It is some weeks since we referred to the fact that Bradbury and Co., Ltd., Oldham, were experimenting with a countershaft two-speed gear, and it was hoped that one of these

Fig. 1.—The new Bradbury countershaft two-speed gear box.

machines would be ready in time for the Six Days' Trial. At the last moment, however, it was decided not to allow it

to take part, although it was driven to Harrogate for the start, where it was keenly examined.

The new model is chain driven, and a few notes of its new points cannot fail to be interesting. A shock-absorbing sprocket on the engine shaft (shown in fig. 2) transmits power through a chain to the gear box which is situated immediately behind the engine and supported on the chain stays as shown in fig. 1. This box gives two speeds and a free engine on the same principle as the old Riley and Humber tricar gear boxes, that is to say, the transmission is direct on high gear and indirect on low, the pinions being thrown into engagement by positive dog clutches, the lever for operating which passes through the lid of the box. The gears are always in mesh, and the shafts have ball bearings throughout, a double row being fitted to the main shaft at its driving end. Fig. 2 shows the arrangement of pedal by which the change of gear is actuated. Pressing the rear pedal down engages the high gear. A Villiers plate clutch is embodied in the back hub, and is operated from the handle bar, the lever being provided with a ratchet so that the clutch can be set to slip to any desired degree. A start-

ing handle driving the fixed clutch member though a chain is attached to the chain stays, and can be operated with the foot.

Fig. 2.—Shock-absorbing engine sprocket.

The bicycle part of the machine is similar to the standard Bradbury, the engine measuring 89 x 89 mm. This machine when placed on the market should be in great demand for sidecar work. We note with pleasure the continued interest which this firm displays toward passenger machines, particularly as the Bradbury tricar of early days was one of the best.

HINTS AND TIPS FOR MOTOR CYCLISTS.

By ROAD RIDER.

MENDING WATERPROOF LEGGINGS.

363. It is a simple matter to repair waterproof overalls when the damage is young, though it is impossible to repair them neatly. The edges of the cut should be lightly drawn together with a needle and cotton. No strain must be put on the thread, or it will rip through the fabric. Then the leg may be turned inside out, and a large patch solutioned on to the reverse side, exactly as in mending a tyre. The "prepared" canvas found in the tyre outfit is a good material for repairing stout overalls. For the lighter patterns use sheet rubber cut

from an old cycle inner tube. A similar method may serve for the repair of waterproof reefer jackets, but if the parts around the buttons or pockets are thus repaired, they should be thoroughly stitched up first by a clever needlewoman, and, in this instance, the stitches should be allowed to remain. After repairing leggings, I usually cut the cotton out when the solution has dried.

TO MAKE A CYLINDER WASHER.

364. When a cylinder is taken off for the removal of carbon deposits, the paper washer between the cylinder

spigot and the top of the crank case is usually torn, and requires replacement. It is an awkward job to mark out a new one in pencil on a sheet of paper, and then snip it round with a pair of scissors. A perfectly fitting washer can be made in a few minutes by the following old engineering shop dodge. Take a sheet of brown paper a little larger than the required size, lay it over the cylinder spigot, and stretch it taut. Then take a very light hammer, and tap the paper gently against the edges of the cylinder spigot and the four holding-down bolt-holes. The taps will cut the paper through against the metal, and a perfect washer will be obtained in a very few seconds. Soak it in oil, and refit it in its proper position.

TO PREVENT PETROL SPRAYING FROM FILLER CAP VENT.

365. There are many ways of preventing petrol spraying from the vent in a filler cap, the most popular being to solder a small hub lubricator over the vent hole on the under side. The simplest of all is to remove the leather washer from the inside of the filler cap, and cut it in two. The cutting line should be a chord of the circle, coming about midway between centre and circumference. Lay the smaller piece of leather across the inside of the cap, and lay the larger piece over it, and at right angles to it. This will cure petrol spraying or oil oozing.

THE N.S.U. TWO SPEED GEAR.

366. Users of the N.S.U. gear need never be afraid of over-lubricating it; the gear will swiftly throw out any excess, which is caught by the shield at the foot of the control lever, and deflected harmlessly to the ground. If the gear be under-lubricated, on the other hand, there is some danger of the planet pinions seizing on their spindles.

The new 3 1/2 h.p. two-speed chain driven Bradbury described above.

SENSATIONAL RECORD-BREAKING.

C. R. Collier rides a mile at 91.37 miles an hour—the fastest speed ever accomplished on a motor cycle.

B RITISH motor cyclists have cause to rejoice in that C. R. Collier, the brilliant Matchless-Jap exponent, has gained from the smart American rider all the records the latter hoped would remain unconquered for some time after his departure. Collier and de Rosier last met on the occasion of the little dinner at Frascati's, which was reported in our issue of last week, and there was nothing in the quiet demeanour of the former to indicate that in just over a week he would have accomplished that which would set the whole motor cycle world a-talking.

In their usually quiet and businesslike way, the Colliers went to work. Not a word was said to anyone, and on Saturday morning last the news flashed round, and caused a great stir among those who keenly follow the pastime.

Friday evening was ideal for record-breaking; what little wind there was blew in favour of the rider, and the weather was typical of what we have been having this glorious summer.

The day was a memorable one for Matchless motors, who have regained the lead for England, and we offer the Messrs. Collier our most sincere congratulations.

Collier's first attempt was on the five miles flying start record, standing at 3m. 43s. After riding a lap to get up speed, he completed the five miles in 3m. 35s. = 83.72 miles per hour, which is British record, the American record for this distance being 3m. 29½s., made by J. de Rosier, at Los Angeles, California, on February 7th, 1911.

The next attempt was on the kilometre flying start of 25½s., made by de Rosier the day previous to his leaving for America. Starting from the fork, Collier was soon going well, and shooting under the members' bridge he came off the banking to the railway straight at a terrific speed, but almost on the kilometre mark his engine seemed to lose its hum, due to the air lever shifting after striking a bad bump. Collier's time for the kilometre was 25s. = 89.48 m.p.h., being world's record.

After returning to the fork to shorten the belt, Collier next attempted the mile. This attempt was even a finer spectacle

than the kilometre, as the engine seemed thoroughly warmed up to its work, and gave out an even roar the moment he shot from under the bridge. His speed was such that, taking the banking after leaving the railway straight, his machine was well up above the 50 feet line used by cars. Collier's time for the flying mile was 39½s. = 91.37 miles per hour, another world's record, and the fastest speed ever attained on a motor bicycle. This beats de Rosier's record of August 4th by 1½s.

At the completion of the attempts, the brothers Collier showed no signs of pleasure; if anything, they were rather sad at the thought that they had not sufficient time previous to the match with de Rosier to do what they have now done with their machine.

The machine was the Red Matchless as used in the three matches with de Rosier, fitted with a twin-cylinder J.A.P. engine, No. 10,516, size 90 × 78.4 mm., Amac carburetter, Bosch magneto, Hutchinson tyres, and Gloria belt. Vacuum oil and Pratt's spirit were used.

RECORDS BY C. R. COLLIER.

Flying kilometre, 25s. = 89.48 m.p.h., world's record.
Flying mile, 39½s. = 91.37 m.p.h., world's record.
Flying five miles, 3m. 35s. = 83.72 m.p.h., British record.

PREVIOUS BESTS.

Flying kilometre, 25½s. = 88.77 m.p.h., J. de Rosier, August 4th, 1911.
Flying mile, 40½s. = 88.24 m.p.h., J. de Rosier, August 4th, 1911.
Flying five miles, 3m. 43s. = 80.72 m.p.h., J. de Rosier, July 8th, 1911.

Above were timed by Messrs. A. V. Ebbelwhite and A. G. Reynolds, official timekeepers to the A.C.U., who were careful to observe that Collier kept his course outside the ten feet line.

The evening was warm and sultry, and if any breeze blew at all it was behind the rider on the railway straight.

A FREAK CLIMB.

Hanson Knabs Hill, leading from Dovedale, at Dove Holes, to Hanson Grange, has hitherto defied all motor cyclists' attempts to climb it, so we are told, and we can well understand the veracity of the statement when the state of the boulder-strewn surface is considered. (See illustrations below.) A. Ainsworth, riding a variably geared Rudge, claims to have accomplished the first ascent, which must be

considered a really wonderful achievement, not solely on account of the steep gradient, but on account of the vile surface. We do not recommend any reader to attempt to emulate Mr. Ainsworth's feat, unless he has no regard for his machine or tyres; in fact, we marvel how the rider kept in the saddle. The gorge is 1,000 yards long, and in some places the gradient is 1 in 3.

Albert Ainsworth, of Ashbourne, climbing Hanson Knabs Hill, Derbyshire. The surface of this incline appears to be a boulder-strewn grass track. See paragraph above.

CLUB NEWS

Sheffield and Hallamshire M.C.C. Reliability Trial which started from Millhouses, where our photograph was taken.

Herts County A.C. (Motor Cycle Section).

The results of the timed hill-climb at Oxenholme were: 1, G. S. Carter (5 h.p. Matchless); 2, C. C. Cooke (3½ h.p. Triumph) and E. A. Colliver (3½ h.p. Zenith).

Cork and District M.C.C.

The results of the reliability trial to Limerick and back, held recently by the above club, were: 1, P. A. Egan (3½ h.p. Triumph); 2, S. R. Hosford (2¾ h.p. Enfield); 3, J. Atkinson (3½ h.p. B.S.A.).

High Wycombe and District M.C.C.

The Hugo Cup competition was run off recently, and resulted as follows: 1, G. Hugo (3½ h.p. P. and M.), cup and gold medal; 2, H. Eccles (4½ h.p. Minerva), Palmer cover kindly presented by Palmer Tyre, Ltd.; 3, E. Gibson (3 h.p. Quadrant), silver medal; 4, R. Pugh (4 h.p. Stevens), bronze medal.

Derby and District M.C.C.

There were eleven entries for the speed trials on August 5th, the winner on handicap being D. C. Bolton (2 h.p. Martin), second A. Ainsworth (3½ h.p. Rudge).

The Henmore Cup Trial was a most interesting and enjoyable affair. The route was laid from Ashbourne to Wirksworth, and return *via* Cross o' th' Hands Hill. Harry Baker (3½ h.p. Triumph) and Edgar Russell (3½ h.p. Bradbury) tied on points, Baker winning the re-run.

North-Eastern A.A.

The following is the result on formula of the reliability trial held in conjunction with Newcastle and District Motor Club on the 7th inst.: 1, G. B. Hall (3½ h.p. Matchless); 2, G. Raper (2½ h.p. two-speed A.J.S.) and R. Crosier (3½ h.p. Ariel); 4, T. Smith (T.T. Triumph).

Sheffield and Hallamshire M.C.C.

The members of the above club held a series of reliability trials on Saturday last. Route Millhouses, Baslow, Buxton, and back to Hathersage. The result was that Mr. Durant's team won with 41 points, Mr. Stacey's team being second with 21 points.

Westmorland M.C.C.

The results of the hill-climbs up Brigsteer Brow (a) on August 8th, and Underbarrow Scar (b) on August 10th were respectively as below:

(a).—1, H. Westwood (3 h.p. Triumph); 2, J. W. Somerwell (3½ h.p. Triumph); 3, J. Braithwaite (3½ h.p. Braithwaite). Fastest time of day, G. A. Gregson (8 h.p. Bat-Jap).

(b). Single Class.—1, J. W. Somerwell (3½ h.p. Triumph); 2, W. Westwood (3½ h.p. Triumph); 3, L. Pierce (3½ h.p. J.A.P.).

Twin Class.—1, J. W. Nelson (3½ h.p. Scott); 2, L. S. Parker (5 h.p. Indian).

Variable Gear Class.—1, G. W. Braithwaite (3½ h.p. Zenith). Fastest time by Hugh Gibson (3½ h.p. Bradbury).

New models in the Six Days' Trials. First appearance in competition of the 8 h.p. Morgan two-seater runabout.

OLD ESTABLISHED but ALWAYS UP-TO-DATE.

1911 IN STOCK.

ZENITH, 3½-6 h.p., 10 days.

SERVICE SIDE CARS, £6 6s. 0d.
from Stock to suit all Motor Cycles.

We also have a large selection of Second-hand Machines—write for list stating requirements. Our Cash, Exchange and Extended Payment Terms are absolutely the best in the trade.

The SERVICE CO., Ltd., 292-3, High Holborn, London, W.C.

The WANDERER.

The WANDERER Motor Cycle is admitted to be the ideal machine by all who have tried it. It is unsurpassed for reliability and efficiency, which is proved by the fact that it has probably gained **more awards** in competitions in proportion to entries **than any other machine**. Don't accept our statements but avail yourself of our month's approval terms. Liberal allowances for old machines in exchange or supplied on our extended payment terms.

THE CHOICE OF AN OIL.

Judging by the remarks in one or two letters recently received, there appears to be an impression in the minds of a few experienced riders that our Huile de Luxe, whilst a brilliant success for speed work, is not as suitable as our Motorine for general touring.

As a matter of fact, Huile de Luxe is superior to Motorine for machines such as the Triumph, Rudge, Premier, and Norton, and for most of the lightweights. We have pleasure in referring to Mr. Harry Long's magnificent total of 20,000 miles in six months on a 3½ h.p. Triumph, lubricated throughout with Huile de Luxe. The engine was recently examined by the Triumph Co., who reported that the lubrication was absolutely perfect.

Huile de Luxe although comparatively light in body, which means free running, is very rich in refined neutral fatty matter, a constituent that ensures the minimum of carbon deposit and almost entire freedom from sooted plugs provided that reasonable care is taken in lubrication.

Another point of importance to the tourist is the fact that fatty oils when heated retain their lubricating efficiency better than pure hydrocarbons. Wear of the bearings must therefore be less with Huile de Luxe than with an oil that is lacking in fatty matter.

PRICE'S PATENT CANDLE CO. LTD.,
BATTERSEA, LONDON, S.W.

Hub Lubricant—post free—½ lb. tins, 9d.; 1 lb. tins, 1/-

We have emphasized the merits of the
BROOKS PLUG

Now, we show it you in section—

Its design we claim to be perfect for its purpose and its efficiency unequalled, and that claim is supported by these facts—

It is perfectly gastight—**without packing**—its body is of rustless steel—its insulator of the finest glazed steatite—its electrodes of pure nickel and—

It will successfully withstand the hottest of the intensely hot sparks associated with the modern ignition systems.

You would like to know more—then ask for leaflet.

In answering these advertisements it is desirable to mention "The Motor Cycle."

Club News.—

Torbay M.C.C.

The first annual open hill-climb under A.C.U. licence and rules takes place on Saturday, September 9th. This being the first open event organised by the club it is hoped all motor cyclists in the surrounding districts will compete; representatives of the trade are specially invited. There will be about nine classes, including a passenger class, and one for ladies. Full particulars will be published later. The secretary is Mr. A. Powel, 37, Fleet Street, Torquay.

Surrey M.C.C.

The reliability competition from Farnham to Lyme Regis and back, held on the 19th ult., resulted as follows: 1, C. J. Feeny (3½ h.p. Triumph), error 2m. 5s., McNab Cup; 2, H. R. Owtram (3½ h.p. Triumph), error 3m. 30s., gold medal; 3, A. L. Ommanney (3½ h.p. Rudge), error 4m. 5s., silver medal; 4, L. Kennard (3½ h.p. Zenith), error 15m. 10s., bronze medal. The errors represent the results of timing at Winchester, Ringwood, and Dorchester on each journey, in addition to the terminal controls.

Tunbridge Wells and District M.C.C.

A most successful reliability trial at the schedule speed of 20 m.p.h. was held on the 29th ult. over a course of some forty-three miles. The Kempshall Tyre Co. of Europe presented the first two prizes, while the third prize was a Lyso rubber belt, kindly given by Lycetts, Ltd. The results were as follow: 1, H. S. Boghurst (3½ h.p. B.S.A.), 30s. error; 2, R. Carey (3½ h.p. Ariel), 2m. 30s. error; 3, H. B. Stevens (3½ h.p. Triumph), 3m. 30s. error.

Further reliability trials will be held on Wednesday, August 30th, and Saturday, September 2nd.

Newcastle and District M.C.

Twenty entrants started in the club's annual two days' reliability trial to Stranraer and back on the 6th and 7th insts. The first check was at Brampton (47½ miles), and the secret control three miles from Castle Douglas, at which point all were checked with the exception of Dawson (5 h.p. N.S.U.), whose belt rim had dropped off, leaving him *hors de combat*. Dinner was taken at New Galloway, and here many casualties were reported. Atrocious weather had been experienced, rain pouring down, and the only competitors who had not lost marks were Crosier, on a brand new Ariel, and Roper, whose new A.J.S. was used direct from its packing case. The day's run finished at Stranraer (162½ miles from Newcastle). Belt slip and tyre troubles were reported, but several got home without losing marks.

Bank Holiday dawned favourably, and the weather all day was fine. Roads were greasy in places, but dry on the whole, and dustless. The return route was superior to the outward one, as instead of wild moorland roads, full of awkward, curly twists, there was a level coast line for many miles. The arrivals back at Newcastle in good time were Crosier and Roper, and as neither had lost any marks at any of the controls, including the two secret controls, the contest between the two for the cup will be decided by seconds only. Other safe arrivals home in good time were T. Smith (3½ h.p. Triumph), Howitt (2 h.p. Humber), Hall (3½ h.p. Matchless), Baxter (2½ h.p. Enfield), Coble (3½ h.p. Triumph), Middleton (3½ h.p. T.T. Triumph), Cooper (3½ h.p. Triumph), R. Smith (3½ h.p. Ariel), Adams (3½ h.p. Rover), and J. Reed (3½ h.p. Rover).

Thanks are due to Mr. Kirsopp for the loan of his Humber car, and to Mr. Nelson Simpson for his Singer.

SNAPSHOTS DURING THE ASCENT OF PORLOCK HILL IN THE M.C.C. STANDARD RELIABILITY, HILL-CLIMBING AND BRAKE-TESTING TRIALS IN DEVON.

(3) E. Kickham (Douglas).

(1) Eli Clarke (Douglas).

(4) F. Smith (Clyno and sidecar).

(2) R. B. Clark (Indian).

(5) H. A. Cooper (Bradbury).

The individual performances were referred to on page 828 and 829 of our last issue, W. Pratt (P. and M.) and R. G. Mundy (Triumph) being the only competitors to successfully ascend the hill.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All queries should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately for ease of reference. Letters containing legal queries should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Slow Running in Traffic.

Q. I am but a novice, and should be glad of your advice on how to get my machine to run slowly through traffic. It is a $3\frac{1}{2}$ h.p. Minerva, and I have found that it will not run slowly for town riding; also that when I lift the valve and slow down to turn a corner it often stops firing altogether, and I have to get off and restart it.—H.J.

Probably you would secure improvement in the running of your machine by fitting a more modern carburetter. What you are suffering from at present is too weak a mixture for slow running, which also accounts for engine stopping when you slow down. What you should do is so to arrange the carburetter that you can practically exclude all the air when you require to run slowly.

Unlighted Railway Crossing Gates.

Q. Whilst riding from Driffield to Hull via Beverley on the evening of July 26th about midnight, I unfortunately took a wrong turn to the left, about 2-3 miles before reaching Beverley, and to my utter dismay about five or six yards in front of me there loomed up a railway crossing gate, into which I collided at about 7-8 m.p.h., buckling slightly the front wheel and the forks. Could I claim damages against the N.E.R. for not having a light on the gate?—L.R.M.

Our legal adviser writes: This query is a difficult one to answer, and it would be best for "L.R.M." to consult a solicitor, and let him write to the railway company claiming the damages he thinks he ought to have. I think it is doubtful whether a railway company is bound to light up the gates at a level crossing, because such gates are put up in pursuance of a statute authorising them to be there, and the Railway Clauses Consolidation Act, 1845, Section 47, while making provisions as to the opening and shutting of the gates, does not say anything about their being lit up at nights. Even if there was no light on the gate itself, I think there must have been a light somewhere near, and a signal box and a man in charge. If there was no one in charge of the gates at the time, or if the gates were shut when they ought to have been open, your correspondent's chances of success are improved. On the other hand, it might be held that there was contributory negligence on his part, through not riding with great caution at midnight. If the damage done is slight,

he had better not spend money on the matter, but if it runs into a few pounds he should, as before stated, consult a solicitor.

Strength of Automatic Inlet Spring.

Q. I have a motor cycle with a small engine of 70×75 mm., and I have had a good deal of trouble with the automatic inlet valve. I should be greatly obliged if you would tell me what you consider would be the correct tension of the spring for an engine of this size.—D.A.P.

We are afraid that we are unable to inform you of the exact tension necessary for the spring of an inlet valve for your engine, because this varies so very much with the actual design of the engine. We should advise you to experiment with the adjustable nut at the top of the valve spring collar, by which the tension on the spring can be materially altered. If the spring is allowed a weak tension, the inlet valve will open with greater rapidity, and starting will then become greatly facilitated. With the stronger spring starting is not so easy as before, but a higher speed can be obtained on the road, and better all-round results.

Sale of Stolen Machine.

Q. Your kind advice on the following case would be very greatly appreciated. I purchased a machine from a man I know very well, and some little time afterwards I exchanged it for another machine and cash. The original machine now turns out to have been stolen, and the party with whom I effected the exchange will have to give it up. He informs me that he will sue me for the value of his machine and the cash. The man I bought it from purchased it from the actual thief. Can I be forced to pay?—W. P. B. O'REILLY.

Our legal adviser's opinion on the case cited above is as follows: The true owner has a right to recover his motor cycle from the party in whose possession it actually is. When Mr. O'Reilly sold it him there was an implied warranty that he had a good title for it. Therefore, Mr. O'Reilly is liable to make its value good. On the other hand, Mr. O'Reilly can sue the party from whom he purchased it for any expense he may incur.

THE MOTOR CYCLE IN WARFARE.

Auto-Carrier triacs attached to the 25th London Cyclist Battalion, carrying Maxim guns. The 25th are the pioneers of military cycling. The members are in camp at Rye, Sussex, and number 400 officers and men—80 per cent. of their establishment.

Sluggish Acceleration.

? Your assistance in the following would be much appreciated: My machine is a 1910 $3\frac{1}{2}$ h.p. (m.o.v.) with Simms magneto, B. and B. carburetter, gear $4\frac{1}{2}$ to 1. It is very sluggish in accelerating, but when once into its stride it takes a lot of slowing down again. With a shade throttle and half air it does 18 m.p.h.; after running at 40 or so for half a mile it will do 25 on the same setting as formerly. How can I cure this so as to get along smartly? The engine carbonises very quickly. I give half a pumpful of oil every five or six miles. Can I reduce this with safety? About how much oil do you recommend for ordinary touring running? The petrol consumption is very heavy (60 or 70 m.p.g.); level is correct, but the jet seems rather large—a number 30, I should think. Would a 27 or 28 cure this? I always drive on as little throttle and as much air as possible.—W.B.R.

We think your machine will pick up a great deal better if you give it more opening on the throttle and considerably less air, although the petrol consumption does seem decidedly abnormal. We think it is better to drive, not with as much air as possible, but rather with the air lever in the position at which the engine pulls best. Modern high compression engines are very prone to carbonise exceedingly quickly, and we think you might be able to give half a pumpful every eight miles instead of every six miles. If there is little or no improvement the piston rings should be replaced. As a general rule, a machine is badly carbon deposited at the end of every thousand miles. One other thing might have a great effect on the picking up, and that is the exact amount of advance which is given to the magneto ignition. We should advise you to try various settings, and see whether a great deal of difference cannot be made in that way.

Excessive Overheating.

? I was not satisfied with the running of my new 5 h.p. machine and sidecar received a month ago; the rear cylinder was faster than the front. I took down the front cylinder and cleaned it; valves wanted grinding. Since cleaning I have run the machine 150 miles. The engine got rather too hot occasionally, but not seriously so. On attempting to start the engine the other morning I found the piston had jammed in the cylinder. I injected paraffin and got it to start, but decided to take the cylinders down to see what was the matter. The front piston inside and webbing of crank case were covered with thick, black greasy deposit, and one ring was gummed in its groove. Outside, the piston wall was badly caked with the same deposit. I ran the engine again, and the improvement was marked.

CLIMBING PORLOCK AND COUNTISBURY HILLS IN THE M.C.C. AUGUST BANK HOLIDAY TRIAL.

Can this be due simply to over heating, under lubrication, or over lubrication with good oil? Another point which puzzles me is that when the machine climbs a hill, the throttle and air full open, ignition full advanced, the engine will not knock, but after reaching the top of the hill and accelerating on the other side, if I shut off the throttle without almost completely cutting off extra air simultaneously, the engine knocks badly.—L.H. We fear the symptoms you describe in your letter are the result of excessive overheating, which may have been caused by bad quality oil. There is also no doubt that the front cylinder is getting more oil than the rear, so that it may be necessary to fit a baffle plate so as to reduce this. The last symptom means that the engine naturally does not get over hot until the summit of the hill has been reached. If the hill were longer it would perhaps start knocking before you reached the top. Otherwise, we can only suppose that you attempt to pick up speed with the air lever too wide open, which usually results in knocking.

READER'S REPLY.**Regular Running at Slow Speeds.**

In reply to "A.A.U.'s" question re 1911 Douglas, "Regular Running at Slow Speeds," July 20th, I have had the same little trouble, but have always put matters right by fitting a new washer under the inlet pipe of the cylinder which is at fault.—V. H. THORNTON.

EXPERIENCES WANTED.

"C.H.S." (Woodbury, S.O.) The Fedelia runabout.

"Y 647." (Yeovil). Ariel coupler with low powered motor cycle.

(1) W. Pratt (two-speed P. and M), who covered himself with glory in the M.C.C. Devonshire trials.

(2) Adjusting belts and tuning up for the ascent.

(3) A Rudge rider suffers a fall at the first corner.

If you
cannot honestly
say that your
magneto is per-
fect fit a

"U.H."

MAGNETO.

It does not require an experienced mechanic to put it into place. It is essentially simple in every way, and yet highly efficient. The task of fitting and dismounting is amazingly simple. Once in position, it needs no further attention, and the motor cyclist in search of a really reliable magneto must on no account fail to send at once for full particulars.

M.C. Dept.,

THE RICH DETACHABLE AIR TUBE Co.
CRAWLEY, SUSSEX. (ONLY ADDRESS).

BECAUSE—They are made of the best rubber and of substantial thickness. Have no butt ends to burst. Save you hotel and train expenses. Enable you to keep an appointment. Can change a tube in five minutes. Can repair on the inside with an ordinary piece of rubber. No expensive prepared patches required. No friction of the patch on the cover. Last longer than any other tube. Prolongs the life of cover. Saves a lot of worry, time, and temper.

IMPORTANT—We draw special attention to the trade and users of our tube, to turn the female end, No. 1, in before joining, also to use a small quantity of our lubricant on the male end, No. 2, a little moisture will revive this when once used. Our tubes are often condemned through these omissions. See that you get the instructions, lubricant, and correct sizes.

DON'T GO BY THE FIRST COST, BUT BY THE MONEY YOU SAVE IN USING THEM.

We can show a thousand unsolicited testimonials.

Don't spoil your Holiday by delay with punctures. Carry a Spare.

See you get the correct size and instruction card.

If you cannot obtain them from the trade, write direct. Sent per return post.

Get a copy of our list, which is full of money-saving bargains in big abundance. Send details of present machine, and receive by return our cash offer for same in part payment of any new model.

WAUCHOPE'S

9, Shoe Lane, Fleet St.,
LONDON, E.C.

Telegrams: "Opifceer, London."

Phone: 5777 Holborn.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, 2d. will be charged for registration, and three stamped and addressed envelopes must be sent for forwarding replies. Only the number will appear in the advertisement. Replies should be addressed, "No. 000, c/o 'The Motor Cycle,' Coventry"; or if "London" is added to the address, then to the number given; c/o "The Motor Cycle," 20, Tudor Street, E.C.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but if not we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions exceeding £10 in value, a deposit fee of 2s. 6d. is charged, when under £10 the fee is 1s. All deposit matters are dealt with at Coventry, and cheques and money orders should be made payable to Ifife and Sons Limited.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR BICYCLES FOR SALE.

SECTION I.

Northumberland, Cumberland, Durham, and Westmoreland.

1908 Moto-Reve, 2h.p., twin, magneto, Druids, excellent condition; £13.-23, Melrose Av.; Monk-seaton.

1910 Bradbury, 2-speed gear, perfect condition; £40, or near offer.—No. 8,156, The Motor Cycle Offices, Coventry.

3 h.p. Quadrant motor cycle, in excellent condition and going order, accumulator ignition; bargain, £5.—Bailey, 120, Park Rd., Wallsend-on-Tyne.

TRIUMPH (August, 1909), 1911 piston, new Palmer cord back, and Whittle belt, Clincher studded front, separate generator lamp, horn, tools, perfect; 29 guineas.—Booker, Wrexham, Stoke Ferry.

TRIUMPHS, Hammers, B.S.A., Royal Enfield motor cycles, lightweights, 2 speeds, free engines; write, wire, or 'phone for immediate deliveries.—Turvey and Co., The Motor House, Sunderland. Tel.: No. 626.

2 1/2 h.p. Minerva, m.o.v., accumulator ignition, brand new 55/- steel studded on back, Palmer on front, first-class going order; £6/10, or offers; will swap for 3-speed push cycle and £3/10.—Dyer, Ghyllwoods, Cocker-mouth.

1911 T.T. Triumph, brand new, as sent from makers, accept £48; 1910 T.T. Triumph, very fast, accept £40, or nearest offer, owner unable to ride, doctor's orders.—Hugh Wood, Rainton House, Fence Houses.

3 1/2 h.p. N.S.U. late 1909, magneto, Whittle belt, ad-32 justable pulley, B. and B., b.h.c., new rings and bushes this season, and magneto thoroughly repaired by makers, steel studded tyre, new tube; nearest offer to £20.—Tait, Stillington, Durham.

FOR Sale, 6h.p. Matchless-Jap, 1911 model, 2-speed gear, not out of crate; retail price £70, will accept £62 cash, reason for disposal, owner buying car; Bradbury, 3 1/2 h.p., 1911 model, new, not been run, £46 cash; Triumph, 3 1/2 h.p., magneto, 1909 model, complete with lamps and spares, in splendid condition, £30 cash.—Apply, Lockerbies, Cycle and Motor Works, Carlisle.

SECTION II.

York and Lancashire.

Siemens Brothers & Co., Limited.

CAXTON HOUSE,

Westminster, LONDON, S.W.

WE TOLD YOU SO.

Six months ago we predicted our cranked axle sidecars would catch on. Everybody now is wanting them. Don't have the old-fashioned straight axles or your tyre bill will mount up.

This is our Model de Luxe.
Complete £5 : 5 : 0 Complete

FARRAR'S HALIFAX SIDECARS.

Absolutely the finest value on the market.

LESS POWER.

It is admitted by experts that, owing to the unique design, far less power is required to propel Farrar's Sidecars than any other style on the market.

NOTE our front arm which grips the sidecar CENTRE. Nothing lopsided about this attachment.

All our Sidecars are now fitted with Farrar's quick detachable joints and cranked back axles, refinements found on very few other makes.

MODEL "DE LUXE"	£5 5
MODEL "C," with cane body	£6 0
MODEL "D," with coach-built body	£7 0
MODEL "E," with reversible child's seat	£6 10

ALL COMPLETE WITH MUDGUARD & TYRES.

Discount to the Trade.

Delivery from stock to suit TRIUMPHS, REXES, P. & M.'s, N.S.U.'s, etc.

LIGHT, STRONG, AND SPLENDID VALUE.

SPRUNG LIKE A CAR.

SECOND HAND MACHINES.

We have a good stock of guaranteed machines and sidecars. List free on application.

P.M.C. "QUICKFIT" Couplings FOR SIDECARS.

PATENT 1442.

With our Quickfit Couplings any sidecar can be attached in sixty seconds and detached in forty seconds, single-handed. No tools required, SAFER than ordinary fittings—no nuts to come off or bolts to "strip." The strain on frame tubes is greatly reduced. PRICE 30/- the set of three couplings, to fit any make. 5/- allowed on old fittings (any make).

Send for list of the famous P.M.C.

Sidecars. Early Delivery.

By far the best value obtainable.

MOTOR BICYCLES FOR SALE.

5 h.p. Twin, h.b.c., adjustable pulley; selling at bargain price.—9, King's Parade, Church End, Finchley.
TWIN Rex, 5 h.p., clutch, handle starting; £20; exchange small car.—17, St. Leonard's Rd., Hove.
1911 4-cyl. F.N., splendid condition, all spares.—Wishart, Orchard View, Bridge Rd., Chertsey.
1911 Douglas, 2 speeds; £40; owner going abroad.—Apply, Capt. Wilton, Read's Garage, Sheerness.
1907 2½ h.p. Minerva, in very fine condition, many refinements, lamp, two belts, spares; £12.—Below.
1909 L.M.C., 3½ h.p., 2 speeds and free engine, spring forks, stand, carrier, Bosch magneto, B. and B. carburetter, h.b.c.; excellent condition; £28.—Below.
1910 5 h.p. Tourist Rex, condition perfect, Lucas lamp, horn, etc.; £36.—Below.
1911 3½ h.p. Premier, latest type, Mabon clutch, Whittle belt, as new throughout; £38.—Below.
1910 F.N. Lightweight, 2½ h.p., 2-speed and free engine model, perfect order and condition; price, with tricycle conversion set, £30.—Below.
1911 Humber 3½ h.p., 2-speed model, quite like new, fitted with Whittle belt, speedometer, lamp, horn, watch, mirror, etc., tools and spares; £44.—Below.
1910 P. and M., 2-speed 3½ h.p. model, new September last, condition perfect; £46.—Below.
1910 Triumph, 3½ h.p. roadster model, perfect in every detail; £35.—Below.
1910 Triumph, 3½ h.p. free engine model, Lucas horn and lamp; £43.—Below.
1911 Rex, 3½ h.p. Tourist model, as new throughout; £36.—Below.
1910 Chater-Lea, 5 h.p. engine with overhead valves, Chater-Lea new spring forks, Jap carburetter, Bosch magneto, both h.b.c., Mabon clutch, 26x2½ tyre, Davison's tank, with gauges, all possible refinements; £55.—Below.
1910 Motococche, magneto ignition, spring forks, Whittle belt, a splendid little machine; £20.—Below.
1910 5 h.p. Rex de Luxe, and Chater-Lea sidecar, all tyres as new, complete accessories, ready for the road; £45.—Below.
1910 Douglas, new September last, in perfect condition inside and out, equipped with lamp and horn; £28.—Below.
1911 7 h.p. Rex Speed King, with Tourist spring forks, stand, carrier, and saddle, finished grey; £38.—Below.
3½ h.p. Quadrant, spring forks, Bosch magneto, B. and B. carburetter, h.b.c., Whittle belt; £16.—Below.
1910 Rex, 3½ h.p., clutch model, soiled in showroom only; £40.—The Eastern Garage Co., 418, Rounford Rd., Forest Gate. Tel.: Stratford 10. P.A.: Eggaruco, London.
1910 3½ h.p. Kerry-Abingdon, perfect order, accessories, and spares; sacrifice £32.—Mott, c/o 6a, High St., Hampstead.
LATE 1910 Scott, perfect order; bargain, £42.
1911 Humber lightweight, magneto, perfect, spares; £28 10.
1910 5 h.p. Indian and sidecar, grand order; £40, near offer considered.
1911 Rex, 5 h.p., 2-speed, free engine, and sidecar, absolutely new condition; owner wants cash, £55.
REX, 3 h.p., £3/10; Brown, 3½ h.p., £8/10.—Gardner, 6a, High St., Hampstead.
EAGLES—Triumph standard, late 1909, had little use, non-skid tyres, spare cover, all accessories; £30.
EAGLES—N.S.U., 3½ h.p., magneto, spring forks, h.b.c., excellent condition; £19/10.
EAGLES—Minerva, B.S.A., 2½ h.p., m.o.v., spring forks, adjustable pulley, h.b.c.; £11/10.
EAGLES—Triumph, 3 h.p., 1905, Hellesden ignition, B. and B. carburetter, in good order; £8/10.
EAGLES—Minerva, 3 h.p., m.o.v., magneto, adjustable pulley, h.b.c., very low built; £16/10.
EAGLES—Triumph, 1911, standard model, for immediate delivery; £48/15.
EAGLES—We have a few brand new single-cylinder N.S.U.'s just delivered, gear-driven magneto, improved carburetter, h.b.c., Shamrock belts, 1911 spring forks and other improvements, complete with tool case, full set of tools, stand, etc.; 3 h.p. £27, 3½ h.p. £31 nett cash; deferred payments arranged.
EAGLES and Co., High St., Acton, N.S.U. West London district agency—Early delivery of 1911 models; liberal allowances for machines in part payment.—Tel.: 556 Chiswick.
F.N., 5 h.p., 1911, in perfect order; £30.—Earl's Court Motor Co., adjoining Earl's Court Station, S.W.
3 h.p. m.o.v. Chater-Fairair, new piston, cylinder by makers, perfect condition.—Gosnold, draper, Folkestone.

MOTOR BICYCLES FOR SALE.

5 h.p. Peugeot, engine new. Chater-Lea frame, wheels, etc., 2½ tyres; £20.—Butler, 22, Rosemont Rd., Acton.

SINGER, 3½ h.p., 1911, 5 months old, very little used; bargain, £36 cash.—Rawson, South View, Belmont, Sutton.

1910 Lightweight, 2½ h.p., exceptionally low and racy, do 40 m.p.h.; £18.—176, Hainsault Rd., Leytonstone.

£8/10.—4½ h.p. twin Sarolea, fast, h.b.c., ½ Whittle belt, good condition.—A. Covell, 16, Mounson Rd., Redhill.

DOUGLAS, 1911, model D, 2-speed, free engine, not ridden 800 miles, faultless; £40.—Walker, West St., Harwich.

DOUGLAS, 2½ h.p., late 1910, bargain, guaranteed, splendid condition.—Southey, 53, Chapel Rd., Worthing.

TRIUMPH, 1910, little ridden, splendid condition, all accessories; £56/10.—51, St. Sutton St., Clerkenwell, E.C.

KERRY, 2½ h.p., accumulator, h.b.c., reliable machine, splendid climber; £12, offers.—Seen, 140a, Camden Rd., N.W.

1911 Quadrant, 3½ h.p., as new, spare Whittle, tube; £39, offers.—Lecdale, 5, Kersley Mews, Battersea Park.

2½ h.p. Minerva, low, long bars, reliable; £9/10.—24 Walford, 38, Dorchester St., New North Rd., Hoxton.

4 h.p. Excelsior, with forecarriage, 2 speeds, handle starting, excellent condition; £12.—Scott, Clarendon, Surrey.

3½ h.p. Very Powerful Minerva, B. and B., h.b.c., Palmer cords; trial; £12/10.—Herington, Merston, Chichester.

WANDSWORTH.—V.S., 5-6 h.p. twin, magneto, h.b.c., Truffault spring forks, adjustable pulley, good order; £23.

WANDSWORTH.—F.N., late 1909, 5-6 h.p., 4 cyls., magneto, spring forks, guaranteed as new; sacrifice £28.

WANDSWORTH.—N.S.U., late 1908, 3½ h.p., m.o.v., magneto, h.b.c., Gradua gear pulley, nice order; £17/10.

WANDSWORTH.—Roc, with sidecar, 5-6 h.p., twin, magneto, 2 speeds, nearly new; bargain, £36.

WANDSWORTH.—F.N. Lightweight, late 1909, magneto, spring forks, nearly new tyres, perfect; £15/10.

WANDSWORTH.—Indian, latest 1910, 5-6 h.p. twin, m.o.v., magneto, h.b.c., spring forks, as new; 38 guineas.

WANDSWORTH.—Griffon, 2½ h.p., m.o.v., fine machine, cheap, £12/10; exchanges.—Wandsworth Motor Exchange, Ebner St., Wandsworth.

TRIUMPH, 3½ h.p., bought 1908, 1911 sidecar, perfect condition; £29.—271, Lauderdale Mansions, Maida Vale.

SACRIFICE.—3½ h.p. Peugeot, spring forks, magneto, B.B., h.b.c., headlight, perfect; £16/10.—Stclair, East Molesey.

DOUGLAS, 1911, ridden 630 miles, Jones speedometer, valves, spares, etc.; £34.—Brewer, 14, Goldstone Villas, Hove.

TRIUMPH, free engine, 1911, straight from works July 24th; no premium; £55.—Lawson's, 225, Edware Rd., W.

F.N., 4-cyl., 5 h.p., fast, splendid condition, good tyres; £19, sidecar £5; no offers.—10, Woodview Gardens, Archway Rd., N.

5-6 h.p. 4-cyl. F.N., enamelled cream, central carburettor, in splendid order; £25.—F.N. Repairs Dept., Highbury.

2½ h.p. Minerva, m.o.v., good engine but requires overhauling; what offers?—Hunt, 50, Meadow Rd., Shortlands, Kent.

QUALITY.—1909 Moto-Reve-Minerva, as new, new tyre, etc.; £18/10, or exchange.—111, Walton Rd., East Molesey.

3½ h.p. Magneto Minerva splendid condition, spares, 32 lamp, horn, etc.—Brown, 32, Girdlers Rd., Brook Green, London, W.

SINGER, magneto slightly out of order, otherwise perfect; £5/10, or useful exchange.—208, Camberwell Rd., London.

6 h.p. Chater-Lea, twin, B. and B., Whittle, 2½ Palmers, very low; £18/10.—40, Replingham Rd., Southfields, S.W.

BRADBURY, 2½ h.p., perfect condition, just overhauled, spring forks, new belt; £12.—White, 48, North Hill, Highbury.

3½ h.p. 1907 Ariel-Minerva, perfect condition, had little use, non-skid tyres, spare cover, all accessories; Arlington Rd., Surbiton.

3½ h.p. V.S., Bosch, 1911 B.B., Truffaults, guaranteed perfect; £15/10; offer 6.—The Hollies, St. Andrew's Rd., Barking.

7 h.p. 1911 2-speed Blue Indian, practically new condition; £61, no offers.—Kruzer, 25, Canonbury Park North, Canonbury.

HELLESEN DRY BATTERY IGNITION SYSTEM AT BROOKLANDS.

Mr. F. A. McNab
riding a

3½ h.p. TRUMP-JAP
captured

2 HOUR RECORD

Covering 110 miles 297 yards.

100 MILE RECORD

Time:—109 min. 8½ sec.

Mr. McNab used an ordinary standard HELLESEN Dry Battery and "H. H." COIL taken from everyday stock, which, as usual, gave perfect satisfaction. This performance again proves the superiority of the "HELLESEN" system over every other form of ignition, yet, although the best system, it is the cheapest.

Install this system on your motor cycle or car. We will give you every assistance willingly.

The Six Days' Trials.

IT has been our privilege to attend every trial the Auto Cycle Union has ever held. Almost without exception each one has been more severe than its predecessor, which is only right if we are to continue progressing. Last week's trial in Yorkshire has been no exception, and it proved far and away the stiffest ever held. On the whole the organisation has been really good for such a huge task, and the work of the officials has been very painstaking.

The hotel accommodation, both as regards headquarters and luncheon stops, has left a good deal to be desired, but it is always difficult to find room for a large number of people, and the fact that the Harrogate season is at its height had a great deal to do with the unsatisfactory arrangements. A mistake has certainly been made in announcing previously the names of the observed hills. That the engines should be allowed to be cooled down, gears lowered, and adjustments made at the foot is entirely wrong. Several competitors certainly took some of the hills on the run, but got little or no credit for so doing. But this is the true test of the hill-climbing abilities of a motor cycle. No tourist is satisfied to have to wait at the foot of every severe hill or commence shortening belts and altering gear-ratios.

As regards the result of the trial, there is one thing absolutely certain, and that is that change-speed gears are now undoubtedly reliable. *The Motor Cycle* has advocated their use for eight years, and is rejoiced to see that its work in this direction has borne fruit. The Auto Cycle Union has done the right thing in selecting a course on which these fitments were practically indispensable, and it is our pleasure to record that gear trouble has been practically non-existent. No

one who has not been over the course can realise its severity, yet the gears have stood the test, and engines have kept cooler and have endured the strain even better than was anticipated. One of the lessons of the Junior T.T. Race was the wonderful advance made in the perfecting of the variably-gear twin-cylinder medium weight, and it will be recalled that we predicted that this machine would sooner or later become a serious rival to the popular $3\frac{1}{2}$ h.p. single cylinder. The performances of this type of machine in last week's trial have proved that our prediction was not far short of the mark, practically all the starters finishing successfully. With such convincing demonstrations of speed and reliability what more does a prospective buyer want. Fittings have been good, and in the main lamps remained rigid, but horns have been proved to be the most flimsy of accessories. There is one point, which we refer to in all seriousness, and that is that notice should be taken of motor cycle clothing. The average overall mackintosh suit serves its purpose well when new, but becomes stained, torn, and absorbent with too great rapidity. We do not suggest that such articles should actually be entered for the trial, but note might be made of their condition before and after the test. The trial has been a great success, and the A.C.U. deserves the heartiest congratulation. The system of awarding marks must certainly be revised another year. Last week a competitor who was unfortunate enough to puncture near a control lost a gold medal, whereas failing on one of the test hills did not involve loss of the premier award. There has been a good deal of bad luck in this, as there has been in every trial ever held, but bad luck can never be eliminated, and those who have suffered it have our most sincere sympathy.

TWO NEW CARBURETTERS.

MR. LAWRENCE J. KETTLE, 27, Northumberland Road, Dublin, informs us that he has been getting exceptionally good results from the "Connolly" carburetter, of which we annex a diagrammatic illustration of the mixing chamber.

The carburetter consists of a cylindrical chamber W, an admission valve, a disc D, and a spindle S, of which the valve V is a part.

The method of its working is as follows: The engine on its suction stroke causes, through suction, the diaphragm or disc D to be depressed towards the petrol union P by the atmospheric pressure on the side of the diaphragm furthest from the opening I. This carries with it the spindle S, which moves the fuel admission valve from its seat F, and allows petrol to enter the chamber; at the same time air enters through the ports A, and is mixed with the petrol; the mixture is then drawn into the engine through the inlet port I. The fuel admission valve can only open the amount controlled by the locking device R. When the suction on the diaphragm or disc ceases the valve is returned to its seating by the agency of the spring B. It will be noticed that this carburetter is of the simplest possible kind, and that it is practically impossible for the jet to get stopped up.

In the course of his experiments, Mr. Kettle informs us he succeeded in getting from 15 to 20 per cent. better petrol consumption on a standard type of machine, with which he used a sidecar carrying a twelve stone passenger. In fact, under these conditions, he states he could run eighty-five miles to the gallon. Another advantage of the carburetter is that it works in any position.

The C.A.P. Carburetter.

The C.A.P. carburetter, the invention and design of Mr. Harold J. Cox, is an entirely new departure in carburetters for motor cycle engines, the most important features being the horizontally arranged jet chamber and the absence of "bottom air." These features, combined with the adjustable jet, special valves, and general design, have proved themselves, after prolonged road tests, to give excellent results.

The carburetter is formed of two main parts—(1) the jet or vaporising chamber, (2) the float or constant level chamber.

The jet chamber is of an entirely new construction. In the centre of its length is situated a combined adjustable jet and spraying cone. On each side of this, and placed equi-distant, are the air and throttle valves. The main air intake is protected by a fine gauze of large diameter. Inside the valves, which are controlled in the usual way from the

handle-bars, are placed the springs which return the valves to their closed positions, this position effectually protecting them from dust and wet. The valves are arranged so that they open in opposite directions, the air valve opening anti-clockwise, and the throttle valve opening clockwise. By this arrangement the current of gas passing through to the engine is deflected over and towards the jet, thereby effecting good suction on partial throttle. The valves themselves are made in the form of a tube passing at right angles through a tube so that when in the open position they virtually constitute a part of the tubular way through from atmosphere to engine. This is a very important point, and one worthy of special attention. With full air and throttle there is an absolutely straight, unobstructed passage from the atmosphere to the engine devoid of any turns.

stood by referring to the drawings than by a description. As will be seen, the mouth of the jet is trumpet shaped, the size of the small hole at the bottom of this being .04in. bore. Directly over the jet, and axially in line with it, is situated the jet adjusting screw with its conical point and spraying cone. The point of this screw fits right into the .04in. hole when screwed down. As this is unscrewed it allows petrol to flow into the conical space between the mouth of the jet and the point of the screw. These surfaces being parallel to one another the petrol is split up more and more as it rises, until, at last, it emerges from the jet in the form of a mist, as can be seen by looking into the carburetter with the engine running. The jet itself is very easily removed by unscrewing one nut.

Prolonged tests were made of this gas plant during the winter months, and very satisfactory results obtained. The machine to which it was fitted—a 1907 3½ h.p. m.o.v. Quadrant—was easier to start, more powerful, kept cooler, could be throttled down to a mere puff, and accelerated to full speed on full air by using the throttle valve only. This latter is a great point in its favour, and it was only found necessary partially to close the air for picking up after slowing down on corners or in traffic.

Under ordinary touring conditions, with the jet adjusted to pass sufficient petrol to give an explosive mixture on full throttle, it was possible to drive on full air all the time, oblivious of other levers. In action it was automatic, but it should be clearly understood that it is not designed, described, or sold as an automatic carburetter.

Petrol consumption, over 145 miles of give and take roads, on a raw Saturday afternoon last December, 1 gallon ½ pint, or, to put it roughly, nearly 140 m.p.g.

It is very pleasing to the inventor to record that more than one competitor used it in this year's T.T. races, and that several motor cyclists have ordered one, even before any, except the experimental models, were made, simply on the strength of a verbal description.

The C.A.P. has already shown itself worthy in competition work this year, and, it will be remembered, was fitted to the Norton machine with which Mr. P. Brewster did so remarkably well at the Bristol hill-climb.

The device is now on the market, and enquiries should be addressed to the C.A.P. Carburetter, 102, Colmore Row, Birmingham.

Sectional elevation through centre of jet chamber.

- | | |
|-------------------------|--|
| A. Air valve. | F. Float valve. |
| B. Throttle valve. | G. Band clip. |
| C. Jet (adjustable). | H. Contracting lock ring for induction pipe. |
| D. Jet adjusting screw. | J. Dust gauze. |
| E. Locking spring. | |

The float chamber is secured to the jet chamber by means of a band clip, which allows the chamber to be moved into various positions and makes it easily detachable from the body. The needle valve is of the inverted type, properly guided, and provided with a slot at one end for grinding purposes. The valve is all made in one piece, and the float, carefully designed to float vertically, is secured in position by a castle nut, which screws on to the valve, and is held in position by a split pin.

The adjustable jet is more easily under-

(2) Rear external expanding band brake.

(3) Foot brake adjustment.

THE ALBION DISC CLUTCH HUB.

THE Albion Engineering Co., Ltd., Tower Works, Upper Highgate Street, Birmingham, are placing upon the market a very cleverly arranged hub for motor cycles, containing a disc clutch, which has so many neat points that it cannot fail to be of interest to our readers.

The external appearance of the hub itself is shown in fig. 1, and with a total width of about 7½ in. over all its weight comes out at some 12 lbs., which, considering its robust construction and great strength, is by no means excessive. It is suitable for powers from anything up to about 7 h.p.

Fig. 2 illustrates the component parts of the hub, whilst fig. 3, which is a half section through it, indicates its general arrangement, and in conjunction with the following description will make its operation quite clear.

The clutch itself consists of twenty-four steel plates, one series of which is directly coupled to the flange from which the belt

and upon which they are secured by a cover plate and lock-nut. On the external periphery of the sleeve are half a dozen

Fig. 2.—The clutch shown disassembled.

keys which fit into slots cut on each alternate clutch plate. On the right-hand side of fig. 2 is shown the interior of the wheel hub shell, in which the attachment of the plates—in this case by keys on the internal periphery of the shell—is made clear. The clutch plates are held together by half a dozen helical springs which bear against the end plate, which is much thicker than the frictional plates, and is furnished with three ears which pass through the three slots cut in the sleeve, and against the ends of which press the three pins of the ball bearing thrust collar through which the clutch is operated. This thrust collar is illustrated in fig. 2, and is, when the hub is assembled, situated inside the inner sleeve, through the three slots of which its points emerge. The collar is operated by a push rod actuated by a quick thread drum, shown on the extreme right-hand side of fig. 3.

The frictional area of the clutch is 275 square inches, and that it embodies very admirable points as well will be clear from a consideration of fig. 3, whence it will be seen that it provides an absolutely direct engagement between the belt rim and the hub shell. There is, of course, a

complete absence of end thrust. Another very excellent feature is that the whole of the clutch, as shown in fig. 2, can be withdrawn from the hub by undoing a single lock ring, and we may say that these same good points characterise a hub two-speed gear in which the clutch is similar to the above, and which the Albion Co. are now in process of producing. Attention is also directed to the fact that the engine can be started by the pedals when the back wheel is at rest upon the ground, as the belt rim shell is connected through the internal sleeve to the chain wheel on the right-hand side, as shown by fig. 3. The free-wheel for the pedal gear is not, as usual, included in the chain wheel, but is fixed completely inside the hub, where it is impervious to mud and dust. The free-wheel, although of comparatively small diameter, is very strong, and has very large wearing surfaces. The clutch hub illustrated is intended for use with the usual type of brake attached to the special belt rim.

Fig. 3.—Part sectional drawing of the Albion hub clutch

A second model is, however, made with an internal expanding brake, which is completely enclosed, and operated by a rod on the outside. In both hubs ball bearings are provided at every point, and the shell holds sufficient oil to enable it to be run for a considerable time without any attention.

Fig. 1.—External view of Albion clutch, complete.

rim is spoked, whilst the other series are similarly coupled to the shell of the wheel hub. The manner of the attachment of these plates is made clear in fig. 2. Referring to that part of the photograph which depicts the plates of the clutch, it will be seen they are assembled on a sleeve which has three slots cut into it,

LATEST WANDERER IMPROVEMENTS.

Several interesting little improvements have been incorporated in the 3 h.p. twin-cylinder Wanderer motor bicycle, sold by the Service Co., Ltd., 292-293, Holborn, W.C. Heavier flywheels and connecting rods are now fitted, and in consequence, we are informed, the machine is much faster. The rear band brake is now much larger in diameter, and is operated by means of a ratchet grip lever on the handle-bar, allowing the brake to be left on while a long, steep hill is being descended. The pulley rim brake is worked by a pedal, the angle of which is adjustable. This pedal is situated on the footrests, and in the event of the footrests becoming damaged a trip may be put into action and the brake converted into a back-peddalling one. Further improvements are a stand which, when out of use, springs up automatically into position, and a locking switch, which can be made to short circuit the magneto and then permanently tightened, so that the machine cannot be used during the rider's

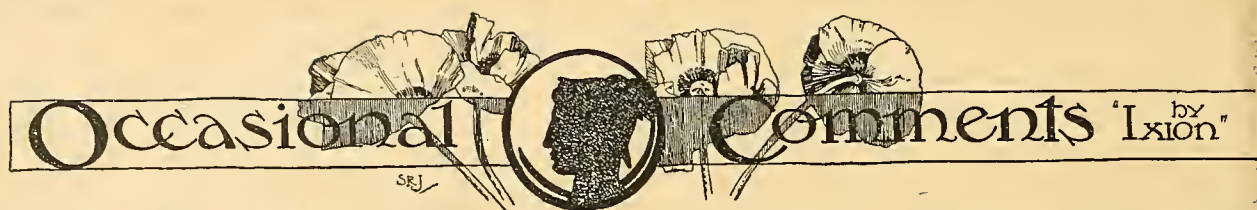

Wanderer hand brake lever and ratchet.

Exhaust lifter and catch.

Locking switch.

absence. Other interesting points about the machine are neat little carriers for the paraffin and oil cans, handle-bar magneto control, and a

very excellent luggage carrier. This year the makers have reduced the gear ratio from 6½ to 1. The machine is full of good points, and is distinctly pleasing in appearance, even to the most casual of observers.

Occasional Comments ^{by} Ixion

The Six Days' Accommodation.

An amateur competitor in the A.C.U. Six Days' Trials writes me as follows:

"I daresay you noticed that the A.C.U. specially invite private owners to compete in their Six Days' Trials, implying that to compete will make a very jolly week's holiday. Personally I am always pleased to see amateurs riding in these events—their performances mean more than those of trade riders, who bestride specially picked and tuned machines, and who have previously familiarised themselves with every inch of the course—especially the hills! But I do consider amateurs ought to be warned that the trials cannot possibly form 'a pleasant holiday.' I am not thinking of the difficulties of the road, the hustling at the checks, or the limitations of a close time schedule, but simply of the headquarters' accommodation, which deprives the men of all ease and comfort in the short intervals between their exhausting rides.

"This year the headquarters were at a small hotel, which in the ordinary way could probably house thirty or forty people in tolerable comfort. Competitors, officials, press men, trade representatives, etc., must compose a total of at least 100, and though many of them were sleeping out over shops, etc., the discomfort was most pronounced. The over-burdened staff could not possibly minister to our needs, at meals we often waited ten minutes between courses, the bath rooms were turned into bed rooms, etc., etc. Much the same applies to garage. Forty of the machines were crammed into a small two-chambered laundry, entered by a single narrow door 3ft. 6in. in breadth, while the remainder were tightly packed into three small and odorous stables. All our work during the daily adjustment period (7.30 a.m.-8 a.m.) was done in the open, and the heat wave did not render the work an easy task. The arrangements were simply scandalous."

[Note.—The amateurs who have been induced to enter by the suggestion that the trials would provide a pleasant holiday seem to have a genuine grievance. I make no doubt that it is difficult for the A.C.U. to secure suitable accommodation in August, and suggest that July would in consequence be a better month. The garage accommodation at the headquarters in the Isle of Man was inadequate, although no complaint could possibly be made respecting the hotel.]

Concealed Tapiess Oil Pumps.

I notice the trend of design is all in favour of concealed oil pumps sunk in the tank, and without doubt this pattern attains a neat and homogeneous appearance. But I have heard countless wails during the season of the shortcomings of these pumps. They leave the lubrication system without any visible indicator, and when a machine commences to run badly the unlucky owner cannot be sure whether his engine is mechanically amiss, or whether shortage of oil is the sole trouble. The novice is likely to seize his piston,

fail on hills, etc., because of the eccentricities of these concealed pumps. If the pumps were both simple and reliable, I would not say a word against them, but in most cases the "automatic" valve at the pump foot is of a delicate and complex nature. The makers I patronise have presented me with no fewer than five of these valves this year, and at the moment of writing the sixth is misbehaving. Nor is this surprising, as a single small fragment of grit, entering with the unfiltered oil, is sufficient to put the valve *hors de combat*. In the worst instances these valves may lead to sad trouble. When they are disorganised by a scrap of grit, the handle offers the usual resistance, but only half the usual quantity of oil gets through, and the engine begins to give trouble. Presently the rough usage still further disorganises the valve, and the seams between the pump and the tank burst under the pressure of the pump piston. Honestly, I have heard so many complaints this year that I have hankerings after the ancient and ugly outside pump, with sight glass and two-way tap. I know several riders who have fitted such pumps to their smart 1911 models in sheer desperation.

Shoddy Tyre Pumps.

At the risk of being styled a chronic grumbler I should like to ask whether a £50 motor bicycle is not worthy of a decent tyre pump? Inflating a 26in. by 2½in. cover is hard work in a heat wave, even if a big garage pump is available, but when we try to use the pumps provided on some machines—! Mine is undersized, and really only suitable for a push "bike." Its connection is about as stout as valve tube rubber, and is staunchly secured to its screw ends by bits of tinfoil. These pumps cost very little when contracted for by the thousand. Some firms I know supply folding foot pumps, with first class connections and barrels of reasonable dimensions, and these possibly cost a little more, but they are worth it. *Si sic omnes*.

A Tip about Overhead Valves.

Overhead valves are becoming quite the rage, and not every user is aware of one of their eccentricities. The slender tappets employed to operate these valves wear with some rapidity, and it is as necessary to keep the gap between valve and rocker small as with the side by side valve. The necessity of continually adjusting the *exhaust* valve tappet tight up to its work would be obvious to anybody, but a little consideration is needed to see that the same applies to the inlet valve. Last week my inlet tappet wore down perhaps ⅜in., and as I had very little time to spare, I delayed to adjust it. Meantime the engine ran very sluggishly and overheated. I rashly imagined that the maladjustment of the tappet would tend to keep the engine cool, as a smaller charge of gas was being inhaled. I overlooked the fact that this maladjustment had altered the timing of my inlet valve, and this was the sole cause of my trouble.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and should be accompanied by the writer's full name and address.

Sidecars and Change-speed Gears.

[5824.]-Referring to the many letters which have appeared in your valuable paper *re* gears and sidecars, I have been patiently waiting for someone to mention the never-failing qualities of the Zenith-Gradua gear. I cannot believe your correspondent could have had experience with a Gradua, or he would not write as he did.

As regards "Ixion's" remarks in a recent issue as to the two adjustable fasteners in one belt to save shortening on the road, the Zenith belt adjustment is just ideal, as all that is needed is to undo one nut, adjust your belt by increasing the distance between the back wheel and pulley (which is done by a quarter-turn of the gear handle), and tighten your nut again, and away.

After about 8,000 miles with a $3\frac{1}{2}$ h.p. and sidecar, I have nothing but praise for it. I have no interest in the firm, bar that of a satisfied owner.

The belt I was using was a one inch intermediate Watawata.
EDWARD COX.

The Vicious Dog.

[5825.]-Many of your correspondents have described various ways of dealing with vicious dogs. One or two have confessed to partial success only, but a correspondent [letter 5290] in a recent issue, lays claim to "most satisfactory and unflinching" success by a generous use of a "fairly stout walking stick of oak or ash with a U-shaped staple" (replacing the ferrule) to which he attached a slender dog chain divided into three parts.

You fasten this to your handle-bar (in the manner described in the letter, if you like), and then—Why, then, when you are in the midst of traffic or greasy roads with treacherous tramlines, or when jolted out of your saddle on our suburban roads, why, then, as a Newfoundland suddenly darts out at you, just remove this instrument and apply it to the dog.

Has your correspondent, sir, and have those others who have suggested similar methods of dealing with (vicious) dogs, followed out their directions under circumstances such as those described above? I, a short time ago, followed out the suggestion of merely raising the arm in a threatening attitude. The method was certainly successful, but not at all agreeable. My machine slipped to one side of the road and myself to the other, to "the horrified surprise and rapid rout" of the Newfoundland attacking me.

I have come to the conclusion that the only safe and sound method is to stop and address a word of warning, etc., to the owner of the dog, and insist upon the dog being held back till I am well away. If I cannot discover the owner, I generally find that the dog will not go for me again as it seems satisfied with its first protest.
G.C.

A Sidecar Suggestion.

[5826.]-With reference to the leaderette, "A Sidecar Suggestion," in a recent issue, we might add that we have experimented in conjunction with manufacturers of flexible metallic tubing with a view to utilising this tubing for the exhaust pipes of motor cycles, and we must say the results have been far from satisfactory owing to the difficulty of maintaining the joint between the tubing and the thimble connection. We beneve all these connections are soldered, and as we are informed by one of the leading manufacturers of flexible metallic tubing that there is no other method of doing it, we have been obliged to abandon the idea. You will quite see that the slightest overheating would cause the

solder to run. We might mention that only a few weeks ago we supplied one of our Clair silencers for a sidecar, but in this case the pipe work was more or less a fixture, the rider in question scarcely ever using his machine separately. We think possibly a suitable steel pipe could be utilised connected to the ordinary silencer by means of a union nut. One could have the ordinary small silencer fixed to the motor cycle for solo work with a threaded outlet pipe, and have a large silencer fitted under the sidecar frame as you suggest, and it would mean but a few minutes to attach the union nut to the outlet of the small silencer. We are of opinion there is a good deal in your suggestion, and are quite willing to let any of your readers have a silencer on approval for trial. J. C. LYELL AND CO., LTD.

[Our suggestion was a *flexible connection*, not necessarily by means of the Flexible Metallic Tubing Co.'s piping.—Ed.]

Businesslike Methods—The Other Side.

[5827.]-I notice a letter in the last issue of *The Motor Cycle* giving "the other side of the question," and am greatly interested.

A friend of mine recently (1911) purchased from the makers a certain $2\frac{1}{2}$ h.p. lightweight. He has had a lot of trouble with it from the first in many ways—leaky tank, defective accessories, etc. The only satisfaction he can get from the company is to be told that he has driven it badly—which I know is not the case—and other unpleasantness from an extremely bumptious director of the company.

For myself, I purchased a $1\frac{1}{2}$ h.p. machine second-hand from the Service Co. (no connection other than satisfied user), and these people have laid themselves out to give me every satisfaction, and most courteously, too, yet it was only an accumulator machine, and of low price.

The climax was reached the other day when I had the pleasure of towing home this celebrated $2\frac{1}{2}$ h.p. "no gymnastic" machine.
C. R. GRIFFIN.

THE SIX DAYS' TRIALS IN YORKSHIRE.

H. V. Colver ($2\frac{1}{2}$ h.p. Enfield) leading a string of competitors over the water splash near Coxwold.

A Home-made Lubricator.

[5828].—*Re* Messrs. Best and Lloyd's new drip feed lubricator and your remarks relating thereto. I have had a very similar instrument in use for about 3½ years. It was originally a J.A.P. sight feed lubricator which from some cause, which I could not understand, at the time, had "gone on strike," but having got the lubricator apart to make the additions I found the horizontal tube to the needle valve choked with sawdust.

The pump I "concocted" out of an old pattern cycle inflator, and the completed article, which I have found to be a most useful accessory, differs from Messrs. Best and Lloyd's only in minor details. I have no gauze at the bottom, but a 3in. steel ball acting as valve. The plunger or bucket is an inverted inflator washer fixed between two steel plates which on the downward stroke allows the oil to pass from the fact of the valve at the bottom being closed. Immediately, however, the plunger rod is pulled the leather washer expands and brings all before it, and, naturally, by suction, draws in a fresh charge past the ball valve. I thought at the time I made the alteration that the substitution of the pump barrel for the small down tube in the tank would interfere with the automatic action of the drip, but in this I was mistaken.

Of course the needle valve requires to be regulated according to temperature of the air. WOOD.

Road Hogging.

[5829].—I feel I should like to call your attention to an incident that happened recently. I was driving a car containing four passengers along the road between Whitney and Willersley on the main road from Hereford to Hay. On coming to a double bend in the road I noticed a cloud of dust rising over the hedges about 200 yards in front. I pulled in close to my own side and glanced at the speedometer which registered just 17 m.p.h. The next moment a motor cyclist came round the corner on his wrong side at a terrific speed, not less than 40 m.p.h. He swerved violently to avoid me, and I swerved right over on to the grass and proceeded to pull up as I was pretty certain he would not be able to get round the corner.

The next instant another motor cycle with two riders came round the corner at the same speed. They were so close that they actually brushed the front mudguard of the car, although I had driven over a foot on to the grass. The first cycle managed to get round the corner somehow, but the second one ran into the hedge about thirty yards farther on.

There is no sense nor reason in this sort of thing. My master (who is a doctor) and I went back to see if anyone was hurt. No was was hurt, but they were considerably shaken and the cycle damaged. I remonstrated with the rider of the first cycle on his abominable conduct in taking corners at such a speed and endangering the lives of other users of the road, and he was most insolent, and remarked that we were on our wrong side and travelling at about 40 m.p.h.

Now I pulled up within five yards without effort with a car weighing 24 cwt., and containing five people. Could such a thing have been done if I had been travelling at more than 17 m.p.h. I have driven thousands of miles, and I say it could not. My master and I pointed out to him his own tracks which were on our side within two feet of the grass, and also the marks where they had both swerved and torn up the stones in the road, showing clearly that they must have been travelling at a terrific speed.

I have never yet met a more unspeakable cad. When we had clearly proved to him that he was entirely in the wrong he had not a word of apology for his abominable conduct. Such cads disgrace the name of motorists. The other two riders did not say anything, as they were pretty badly shaken, but their method of using the road is equally to be condemned with the other. I am sorry for the passenger as, of course, he had no chance of doing anything in the matter.

I may say I own and drive a motor cycle, therefore, I speak without prejudice, and in the hope that others who may be endangering lives in the same way as these two will, when they read this, try to remember that they can get no end of pleasure out of a motor cycle without the slightest danger or inconvenience to other users of the road.

I must apologise for taking up so much of your space, but it is such a bad case of road-hogging that I do not think it right to let it pass unnoticed. Had I been driving a horse instead of a car there would have been an awful smash.

E. C. MORRIS.

That Fibre Bush.

[5830].—Two or three times lately I have been unable to start my machine owing to the swelling of the fibre-bush on the pivot of the bell crank lever in the magneto machine. I do not remember the same thing on a previous machine. It is a very trifling point, but on the first occasion was not located at once. Is all fibre liable to this objection, or can the makers obviate the trouble by allowing a shade more clearance? I have heard of other cases besides my own.

AB 668.

SUMMARY OF CORRESPONDENCE.

F. R. Davis wishes to thank the rider of a P. and M. for his assistance between Staines and Sunbury on the 7th.

THE HAMPSHIRE M.C.U. INTER-CLUB HILL-CLIMB.

(1) A rider of a 5 h.p. Indian, who made fastest time in the inter-club hill-climb held recently at South Harting, near Petersfield.

(2) Rolphe (T.T. Premier) who was only 1 sec. slower than the Indian rider.

"CLINCHER"

DREADNOUGHT MOTOR CYCLE TYRES.

Eminently suitable for high powered motor cycles, possesses marked resiliency, and is very speedy. The tread also makes it an ideal non-skid.

SIX DAYS

HARROGATE
AS A CENTRE

RELIABILITY TRIALS

(Continued from page 852)

Second Day, Tuesday, August 15th.—Harrogate to Kirkby Stephen.

Kirkby Stephen, Aisgill, Askrigg, Searth Nick, Bedale, Baldersby Gate, Thirsk, Knaresborough, Harrogate.

After lunch at Kirkby Stephen, the competitors followed a fairly good road, for which they were genuinely thankful, and, save for a patch of loose metal on a bridge on the railway just after leaving Kirkby, the surface was quite good. There were, however, numerous steep pitches, mostly on the down grade. The valley is sadly reminiscent of the railway accident early in the year at Aisgill, which we passed. The scenery was particularly lovely from Askrigg to Searth Nick, and on the way to the latter Bolton Castle was passed—a fine old ruin in which Mary Queen of Scots was incarcerated. Searth Nick is off the main road, and a special *détour* was made to include it.

The surface was terribly rough, but the stones could be dodged by riding on the grass at the side until an official car, which is fond of doing these things stuck for some minutes, and made people ride among the "boulders." As regards gradient, it was longer, but probably not steeper, than Punchard Hill, the correct name of the place where the men were officially observed this morning.

It was a lovely spot, shaded by trees, and from which a fine view could be obtained over the valley. Many people have grumbled about the surface to-day, but it must be remembered that the route through Arkengarthdale and over Tan Hill is a main road, given in the Contour Book, and Searth Nick is just the hill that some people ride up and write to the papers on their achievements, and then object to climbing it in competition. It proved, however, to be moderately easy, and the only failures were those of Colver (2½ h.p. Enfield), Busby (3½ h.p. Precision), and Slatter (2½ h.p. Alcyon). Maurice (3½ h.p. Premier) came up with a spare belt in his mouth, much to everyone's amusement. Holroyd (Motosacoche) pedalled, but got up. Pratt and Shaw on their P. and M. climbed the hill on top gears.

The day's run has certainly been somewhat stiff. The awful surface of Tan Hill was a severe test, and there were

numerous steep pitches to be negotiated which have not been specified. Nothing so steep and long as Sutton Bank has been encountered to-day, and talking of Sutton reminds me of Gray's performance yesterday. His Rudge had a dry skid at the corner above where I was standing, turned round pointing down the hill, then was turned up again and continued without the rider dismounting. From Searth Nick, Leyburn, Thirsk, Topcliffe, Boroughbridge, and Knaresborough presented no difficulties.

There was some grumbling as regards the distance of the Brough check from Leyburn. The distance on the route card was given as twenty-seven and threequarter miles, but a number of competitors afterwards proved by their distance recorders that the exact distance was thirty-one miles. This, of course, led to several competitors being late, and many marks were lost thereby. W. Creyton unfortunately suffered three punctures in succession, which caused him to arrive thirty minutes late at the next control. The loose condition of the roads accounted for a great many tyre troubles, O. C. Godfrey (Indian and sidecar) not being free from this worry. Poor Applebee, ever unlucky, noticed that his engine was running freely after climbing up to Tan Hill Inn, and, dismounting, found that the rear belt pulley had been torn from the wheel rim. He was towed home by a farmer's cart, and had to retire.

Competitors had to touch Appleby and return by the same route. It is said that some of the stragglers, hearing that there was no check at Appleby, turned before reaching that place, and enquiries are proceeding in consequence.

An Irate Farmer.

There was an amusing incident just before the last check on this day. A number of riders found that they were some time ahead, and they were all amused at the energy of V. Busby, the Steelhouse-Precision rider, who actually took the cylinder off and scraped away the carbon, eventually checking in to time, his task completed. C. P. Finn reported on arrival at Harrogate that he had collided with a cyclist who rode out of a byroad, and whom he was unable to avoid, but not much damage resulted.

J. H. Slaughter (3½ h.p. L.M.C.) and H. G. Dixon (3½ h.p. New Hudson) on Wass Bank.

A.C.U. Six Days' Reliability Trials.—

N. D. Slatter (2 h.p. Alcyon) repairs a puncture on Tan Hill on the second day of the Six Days' Trials.

Near Kirkby Stephen, Eggington and Cooper, while taking a corner, suddenly encountered a herd of cattle. Eggington hit one and finished in the ditch. Cooper lectured the farmer in charge on the subject of loose cattle on the highway, which so roused the ire of the latter that he started to chase the offender, and had not Cooper's engine fired the result may only be conjectured. The other competitors who had now arrived were much amused by the incident.

Official List of Failures on Arkengarthdale Hill.

L. S. Parker, C. P. Finn, V. Busby, W. H. Eggington, F. W. Applebee, W. Creyton, and T. Silver.

Tuesday. Marks Lost for Reliability Only.

A. C. Robbins, 35; C. C. Cooke, 25; V. Wilberforce, 2; P. W. Moffatt, 3; Jack Baker, 3; C. Williams, 3; C. P. Finn, 10; G. T. Gray, 7; H. M. Jameson, 5; W. T. Munro, 1; G. Castagnoli, 48; S. J. Woolley, 11; H. Graham Dixon, 7; H. E. Ashley, 63; W. H. Eggington, 23; P. J. Evans, 5; N. D. Slatter, 30; S. Crawley, 2; W. Creyton, 19; A. P. Maurice, 4; T. Silver, 12; S. Fontaine, 18; J. S. Holroyd, 5; J. Tassell, 10; and F. Smith, 6. F. W. Applebee and H. F. S. Morgan retired.

Thirty-seven competitors had lost no marks on Monday's and Tuesday's runs.

Third Day, Wednesday, August 16th.

Harrogate to Scarborough, *via* York, Garrowby, Great Driffield, Skipsea, Bridlington, and Filey, returning by Whitby Blue Bank, Pickering, York, and Wetherby. 193½ miles.

To-day's run was the longest in the trial, and on account of its length somewhat monotonous, but the two test hills, though stiff, were ordinary main road acclivities, which every modern machine ought to climb. We are now halfway through the trial, and looking back on the last three days, I am pleased to say the organisation has been good on the whole. Every morning the machines are started at eight o'clock by Mr. Nisbet, and previous to that hour they are taken from their lock-up houses, and are placed opposite the various stations in the yard which are marked with their numbers. Competitors may thus spend thirty minutes on preparations and adjustments. The men are despatched in different order every morning. Wednesday morning was dull and somewhat cold, and the first part of the run through Knaresborough to York was quite easy. The tramlines in the city were freshly watered, but fortunately there was not very much of them, and it is my pleasant duty to relate that the way through was well marked, as has been the case all along the route, thanks to the fact that an official car is sent ahead every morning to see that the arrows are in place.

For thirteen miles out of York the road was good and over flat country; then Garrowby Hill loomed into view. It is a sudden rise over the flank of hills which break the monotony of the great plain in which York is situated. The surface is fair, and I do not think the gradient is much worse than 1 in 8. Consequently there were few incidents. Holroyd (Motosacoche) got up comfortably with pedal assistance. Slatter's little Alcyon made quite a good ascent. Smith (Clyno) and Godfrey (Indian) made excellent performances, while Tassell's Matchless was another passenger machine which did almost as well. Of the fastest motor bicyclists, Weatherill (Zenith), Edmond (Premier), Pratt (P. and M.), and Newsome (Triumph) may be mentioned as shining conspicuously. Finn (Enfield) ran alongside. On this occasion I handed over the Scott to a colleague, and, thanks to the courtesy of Mr. John Gibson, I was given a seat on his Little Briton car, with which he has done valuable work for the A.C.U.

Blue Bank Hill.

This ascent from the valley at the head of which Whitby lies rises abruptly from the village of Sleights on to the moors, and has a maximum gradient of about 1 in 7. Finn (Enfield) was the only competitor who had to dismount. Holroyd on the diminutive Motosacoche climbed the hill well with pedal assistance. Quite a conspicuously good ascent was made by Pratt, who climbed the steepest portion on top gear. All the other competitors made clean ascents. There was a large number of spectators who had come from Whitby specially to see the event. The run from the summit of this long hill consisted of sixteen miles of beautiful moorland, over which the sun shone brightly, making the purple heather look its best.

Wednesday was in striking contrast to the blazing sun of the two previous days, the conditions overhead were none too promising, and it was distinctly cold. The road surfaces were exceedingly good, and the long run along the coast with all too brief glimpses of the North Sea was much enjoyed.

The first to stop this morning was W. F. Newsome, who suffered a back wheel puncture. Really the luck seems to be all against the Triumph team this year. In York crowds had collected along the streets to witness the long procession

A. J. Stevens on Arkengarthdale Hill. This photograph gives a good impression of the state of the road at this point.

Two competitors

traversed in
Wednesday's run.

of competitors, and many were the comments of the man in the street, as to which type of machine he considered best. Most certainly the buzz buzz of the Scotts excited their admiration, and the ease with which the competitors with change speed gears got away after stopping for the check was duly appreciated.

Along the Coastline.

The second check was at Great Driffield, and for the second time, unfortunately, the mileage on the A.C.U. cards was found to be incorrect, as several competitors arrived too early, and their chances of a gold medal were jeopardised thereby. At a meeting in the evening the judges decided not to deduct marks for errors at this check. The coast line was reached at Skipsea, and then the competitors struck due north, passing through Carnaby and Bridlington. Here two riders retired—P. Grout, through the connecting rod brasses of his Douglas giving out, and F. Smith (Clyno), who experienced trouble with his experimental four-speed gear and decided to give up, not because it was an irreparable breakdown, but simply because he felt too ill to set about putting matters right immediately. He has been off colour for over a week, and was in bed until the day prior to the start. Effecting a repair in the afternoon he returned to Harrogate by road. The sea was noticeably choppy as Bampton and Reighton were passed, and a glimpse of the waves dashing over Filey Brig attracted the riders' notice. All ran regularly to Scarborough; in fact, it was remarked how splendidly the machines were behaving on this gruelling day's run.

After an excellent lunch at the Cambridge Hotel, a move was made *via* Burniston, Falcon Inn, High Hawsker, to Whitby (check), then to Ruswarp and Blue Bank, the second observed hill.

On the mountain road a curious thing happened. Crossing a patch of stones in a bunch, A. J. Sproston, O. C. Godfrey, and G. T. Gray all drew up simultaneously with cuts in their tyres. Godfrey's tyre had a 3in. gash, and, borrowing a gaiter, he first used his bootlaces to secure it, and later, when it gave way again, his mother's waist belt was utilised! Mrs. Godfrey vows she will inspect the tyres before she ventures with her son again. Eventually a gaiter lent by Mr. John Gibson, who was passing, enabled Godfrey to reach Harrogate with a minimum loss of marks. The return run was *via* Pickering, Malton, York, and Wetherby, only an occasional puncture spoiling the riders' enjoyment. S. J. Woolley was delayed by a broken inlet valve—the second to-day. His *confère*, J. H. Slaughter, good-naturedly returned several miles to hand over his own spare. Nearing Harrogate, a mile of newly spread tar considerably checked the competitors' speed. The crowds to witness the arrivals had noticeably increased.

At the end of to-day's run seven more had spoilt their hitherto perfect scores, and the number of retirements now totalled seven.

Wednesday's Marks Lost.

W. T. Munro, 43; S. J. Woolley, 88; H. E. Ashley, 15; A. J. Sproston, 16; and O. C. Godfrey, 44. F. Smith (four speed gear wrong) and P. Grout (connecting rod) retired.

A.C.U. Six Days' Reliability Trials.—**Fourth Day, Thursday, August 17th.**

Harrogate to Settle and back, *via* Allerton, Manleverer, Boroughbridge, Ripon, Pateley Bridge, Grassington, Linton, Settle, Hawes, Aysgarth, Kettlewell, Bolton Bridge, Blubberhouses, and Norwood Edge. 177 miles.

Sixty-nine competitors were started from Harrogate this morning by Mr. Davies, of the Kempshall Tyre Co., whose car has been of great assistance to the A.C.U., and were

E. W. Merrall and P. Shaw, both riding $3\frac{1}{2}$ h.p. P. and M.'s, on Tan Hill, on Tuesday, the 15th inst.

timed out by Mr. Straight. While the men were getting their machines ready, Mr. Nisbet announced through the megaphone that, in view of the railway disturbances, there might be a shortage in petrol, and consequently riders were advised to carry as much as they could, as it might be difficult, if not impossible, to get any more. As a further precaution, the A.C.U. officials asked Mr. John Gibson to take a few tins aboard his car, and he arrived at both hills in time to be of service in this respect. B. H. Davies suffered a seized engine bearing one hundred yards from the finish last night—an incident which so disheartened him that he said he would retire. However, this morning pluck and perseverance prevailed, and he freed the bearing and started.

The early part of the morning's run was over ordinary country to a point just outside York, thence the route went *via* Allerton and Manleverer to Boroughbridge, the first check, and through Ripon to Pateley Bridge, immediately after which Greenhow Bank is encountered. Here numerous competitors stopped to alter their pulleys or shorten their

belts, and in some cases to pour water over their engines to cool them quickly, which certainly appeared to be a dangerous proceeding. The P. and M. team was busy as usual with the cleaning rag, so that after this attention the enamel and plating were resplendent. Berwick (Humber) stopped at the foot, and, like several others, ran back some distance to get a good start. Castagnoli (L.M.C.) made a standing start and climbed the hill in admirable style. P. G. Evans (Humber) went straight up without stopping at the foot. Greenhow Hill is certainly severe, as it rises abruptly from the end of the village, is steep at the outset, and mounts up in a series of steps for two and a half miles. The surface is good as a whole.

Those who were not fortunate enough to make clean ascents were: Fontaine (Quadrant), who stopped on the first steep section; Woolley (L.M.C.); H. G. Dixon (N. Hudson), who failed quite near the top, due to the fact that there was a blowhole in his cylinder through which the compression was escaping; Busby ($5\frac{1}{2}$ h.p. Precision); and Clark ($3\frac{1}{2}$ h.p. Dene), the latter coming to a standstill on the second steep portion. News came to hand at the foot of Greenhow that Slaughter (L.M.C.) had retired near Boroughbridge through a broken connecting rod.

After the hill had been surmounted the route lay over moorland country, which included several stiff ascents to Grassington, and through fine scenery to Linton, Gargrave, and Settle, where lunch was served. Three miles from the latter town F. Dover ($3\frac{1}{2}$ h.p. Premier), was forced to withdraw from the competition through a faulty plug which could not be withdrawn from the valve cap, and two and a half hours were wasted in sending it to a repair shop. After lunch the route lay through Horton-in-Ribblesdale and Hawes to Aysgarth, where the check was in charge of Mr. A. A. Scott, the clever designer of the machine which bears his name. Very soon after this village the road begins to ascend preparatory to going over Kidstones Pass, which reaches a height of 1,376ft. The severity of the climb lies chiefly in its length, the worst gradient being probably not worse than 1 in 6. The surface is rough, but quite rideable, and not to be compared with that on Tan Hill, which was traversed on Tuesday. On the whole, the competitors did well at this point, taking it into consideration that it was severe, and that people thought it was worse than it was.

The whole day had been gloriously fine and sunny, and the view from the top, down from which a strong wind was blowing, was glorious. Clark, who failed on Greenhow, made quite a good ascent; Babington (7-8 h.p. Bat) made a very good showing; Tassell (Matchless and sidecar) was brought to a standstill through a slipping belt; Parker (Scott) came up slowly; Houghton ($3\frac{1}{2}$ h.p. Bradbury) baulked Shaw (P. and M.) and failed; C. T. Newsome ($3\frac{1}{2}$ h.p. Rover) swerved, nearly fell, but recovered smartly; Busby (Precision) dismounted, and ran and then stopped; Wells ($3\frac{1}{2}$ h.p. Bradbury), Baker ($3\frac{1}{2}$ h.p. Triumph), Woolley (L.M.C.), and Jameson ($3\frac{1}{2}$ h.p. Zenith), all came to a standstill on the stiffest portion; Holroyd (Motosacoche)

pedalled till he could pedal no more, and stopped; Finn (Enfield) and Williams (Triumph) dismounted; Ashley (L.M.C.) was hampered by an empty sidecar. Many failures were due to those who had change-speed gears not knowing how to use them, and dropping into the low gear too late.

A notable feature of Kidstones Pass was the number of bad *caniveaux* which were found on both sides. Halfway down the pass the road became much better, and lay through Kettlewell to Burnsall, where we noticed an interesting quadcar bearing the registration letters A.K. It was driven by an 8 h.p. twin Chater-Lea engine, and had a three-speed gear box and chain drive, all wheels were sprung. The seat was of wicker, and probably the whole did not weigh more than 4 cwt. It would be interesting to hear further details from the owner. The dust was white and thick as flour and most unpleasant. The King was expected in Bolton Abbey, and the competitors passed through a large crowd which was awaiting him. After Blubberhouses there was a steep ascent known as Church Hill, in which there were two or three hair pin bends, which caused many to dismount. Gray who was late came off at several corners while trying to make up time. Abbott had trouble with his carburettor and oil pump, and at Kidstones was behind time. Norwood Edge was the last hill of note to be ascended.

Thursday's Marks Lost.

Marks were lost to-day by the following: Abbott (Bradbury), 3; Castagnoli (L.M.C.), 12; Ashley (L.M.C.), 32; A. P. Maurice (Premier), 16; and S. Fontaine (Quadrant).

Fifth Day, Friday, August 18th.

Harrogate to Otley, Bingley, Heaton Woods, Colne, Settle, Burnsall, and back *via* Brown Stay Ridge, Masham, and Boroughbridge. 172½ miles.

Friday morning was rather dull, and a strong westerly wind was blowing, which would affect the riders perceptibly on all the hills as far as Settle. Many competitors were attending to their valves this morning, as the run was to be the stiffest of the six days. I made a rather late start, and just before leaving the hotel Maurice (Premier) came into the yard and reported that magneto troubles had caused him to retire. On account of the strike, 2s. 6d. per gallon had to be paid for petrol. Most people seem to agree that the Auto Cycle Union made a great mistake in choosing Heaton Woods as the observed hill, when Keighley Gate was far more suitable for the purpose, and in my opinion there is no doubt that the longer hill was the better. The early part of the morning run was over easy country, which became pretty on reaching Otley. The fact that Keighley Gate was ignored by the officials seemed to be good enough reason for *The Motor Cycle* to take note of the performances. The hill rises directly out of the town of Ilkley, and is fairly steep even at the beginning. Then come several steep sections, approached by sharp corners. From the steep portion where my observations were made there was a fine view of the surrounding country, and also of the major portion of the hill. The wind blew strongly down the course, and at times a fine rain fell. Newsome (Triumph) was the first man to dismount, his pulley being set to too high a gear, and he was baulked by another competitor. His first attempt at restarting on the

clutch was a failure, as he ran into the bank. Godfrey (Indian and sidecar) made, as usual, a good ascent, but was baulked by the machine in front of him. Tassell (Matchless and sidecar) stopped, and baulked Weatherill (Zenith), Duke (Zenith), Crawley (Triumph), Fontaine (Quadrant), who pedalled, Slatter (Alcyon), Haslam (Zenith), and Edmond (Premier), but they all managed to avoid the obstruction. Horeys managed to surmount the steep portion by a lot of laborious pedalling. Moffatt (Douglas), Silver (Quadrant), Davies (Rudge), Williams (Triumph), and Baker (Scott) skidded on the loose surface and ran into the bank, but restarted in good form. After two attempts, Dixon (Hudson) and several others stopped lower down the hill, one of these being Finn (Enfield). Among other unfortunates were Ashley (Roc), Eggington (Zenith), who skidded and turned right round, Boddington (Precision), Jameson (Zenith), and Ruscoe (Forward).

Some Unlucky Accidents.

Heaton Woods was a short stiff hill among woods which is said to resemble the hairpin corner at Ramsey. Wells failed through his belt coming off at starting, but his second attempt was successful. Silver, Creyton, Finn, Baker, Fontaine, and Burney failed to make clean ascents. The road over the moors was very rough, and on this section steep ascents and descents abounded. One drop at Wilsden was exceptionally steep, and the road into Colne was in itself a severe test, and in addition to the hills and rough surface gates had to be opened, and to make matters worse a heavy shower was encountered. Cooper, while crossing the moors, struck a big stone which threw him right on to the grass; these boulders and gulleys require careful watching. Berwick (Humber) struck the big *caniveau* on Keighley gate and completely smashed up his rear wheel, so that he was forced to retire, thus spoiling the chances of the Humber team, which up to that point had lost no marks. Nearing Colne one and a half miles of tramlines were encountered. Colne was the third case of incorrect measurement on the route card, and the wet lines were not appreciated by those who were anxious to make up time. Coming into Settle Pollock (James) crashed into the wall of a bridge, hurting his hand badly and cutting his knee.

A Surprise Hill and its Victims.

Lunch was served at Settle, where the petrol arrangements were excellently managed by Mr. Hackblock, of the West Yorkshire Automobile Co. Abbott arrived late owing to more carburettor trouble and two punctures; Fontaine (Quadrant) was also delayed through tyre troubles. He had hurt his leg in the Scottish trials, and had to remove a bandage to strengthen a weak place in his cover. After leaving the main road at Hellifield a byroad was struck with good surface but with many bends. Riding back from the Burnsall check to Pateley Bridge, the hill leading to Skytholm Moor took us completely by surprise, so we decided to take notes of the performances. The rise commences with left-hand hairpin bend on a gradient of 1 in 6, and the undermentioned failed, but it should be added that the competitors tackled the ascent with hot engines and were unprepared: Clevton, Colliver, Greaves, Sawyer, Baker, Stevens, Slatter, Finn, Cooper, Colver, Tessier, Gray, Ashley, Houghton (who had four attempts), Bushy, Wells, Whitworth, and Grange. In

A group of competitors outside the Scarborough controls.

The A.C.U. Six Days' Reliability Trials.—

some cases batches of riders attempted the climb and impeded one another. Jesse Baker and Merrill restarted from the points at which they were hindered and finished the climb magnificently.

From here to Pateley Bridge there was a splendid run over the grand undulating road which leads to the summit of Greenhow. Descending this slope, the men entered Pateley, to find part of the main street up. There were three hundred yards of bumping over stone setts, which became steeper and steeper until competitors reached Brownstay Ridge, a really stiff ascent, which appeared to be much worse than Keighley. The gradient was about 1 in 5. There was one bad corner with the usual gully, and the surface was rather rough at the summit. The following machines did not make clean ascents: Baker (Triumph), Finn (Enfield), Silver (Quadrant), Woolley (L.M.C.), Fontaine (Quadrant), Eggington (Zenith), Atkinson (Hudson), who had altogether thirteen punctures and was in a hurry, Duke, Colver (Zenith), Parker (Scott), and Abbott (Bradbury). Curiously enough, the majority of the machines made remarkably good performances, and some, although this was the last hill-climb in the trial, appeared to be going better than ever. Baker's failure was due to the breaking of a belt. In Masham a competitor had to pay as much as 3s. a gallon for petrol.

Babbington punctured just short of the control here, and was almost reduced to tears, while Atkinson suffered the last of his punctures near Boroughbridge.

Everyone agrees that to-day's run has been the most severe of all. Much sympathy is felt for Berwick, whose retirement is reported above, and for Duke on his failure to climb Brownstay, thus spoiling the chances of the Zenith team on the last observed hill of all.

The Last Day's Run.

A circular run from Harrogate, passing Harewood, Selby, Market Weighton, Great Driffield, York, and Wetherby, 124½ miles.

To-day's run has been a mere holiday jaunt compared with its predecessors; in fact the only reason for its existence was to make up the mileage to 1,000. Sixty-five competitors

left the starting point on a beautifully fine morning, which as usual, developed into a warm sunny day. The Leeds Road was taken as far as Harewood. Godfrey, Robbins, and Cooper were our companions for many miles. The machines of all of them were running well; in fact, the same may be said of all the surviving motor bicycles, which have stood the severe test admirably.

Near Selby about thirty or forty competitors drew up outside the town, as they were, as usual, ahead of time, and the interval was spent in cleaning up and making adjustments. Wilberforce found nothing to do to his Douglas, so he lay on the grass and basked in the sun. Philipp and the other Scott riders did likewise. B. H. Davies, however, was busy with his belt. His arrival created a stir, as one sleeve of his coat was black with oil, some kind person having spilt a tin of this "matter out of place" over it. Petrol was pretty dear at Selby, and, in consequence, the threepenny toll was not appreciated. How much more annoyance, therefore, was caused by another threepenny toll which was encountered unexpectedly a few miles further on, the high gate of which was guarded by a policeman. Taken as a whole the roads were excellent, a little twisty at first, but more often than not smooth and straight, and there were practically no hills. The dust, however, was very trying.

At Market Weighton one or two riders, myself among them, stopped for petrol, which was on sale at a chemist's shop, suggestive of some remote place in Italy or Austria, not only on account of the fact that it was bought from the local druggist, but of the cost, which was 2s. a gallon. The run to York after the Great Driffield check was over a straight, smooth, though rather loose road, and the miles flew quickly by. Of incidents there were practically none. Cooper, who always appears to have an affinity for loose animals on the highway, had an exciting chase after a runaway horse. Robbins had a puncture, and Silver several.

The catering arrangements at the luncheon stops have been, on the whole, very indifferent. York Station was guarded by soldiers, and the whole neighbourhood upset by the strike. Petrol was 3s. a gallon. All the sixty-five starters arrived safely at Harrogate, the first man coming in at 3.30 p.m. Of the seventy-seven starters on Monday,

W. T. Munroe
(3½ h.p. 3-speed
Rover) on
Salter's Bend—a
pretty curve on
the return from
Blue Bank.

W. E. Grange (3½ h.p. two-speed Bradbury), followed by S. J. Woolley (3½ h.p. L.M.C.), on the first stiff part of Brownstay Ridge, the last observed hill.

L. S. Parker (3½ h.p. Scott) and H. E. Ashley (3½ h.p. L.M.C.) on the steepest part of Kidstones Pass.

there were only twelve retirements, so that the general behaviour of the machines may be regarded as excellent, and a striking advance upon any former demonstrations of reliability, notwithstanding the increased severity of the test.

The following competitors retired for reasons stated:

J. H. Crickmore (2½ h.p. Premier), second day, owing to fall.

A. D. Arter (3½ h.p. James), first day, engine trouble.

P. Grout (2¾ h.p. Douglas), third day, engine trouble.

F. Banks (3½ h.p. Invincible), second day, tyre troubles.

J. H. Slaughter (3½ h.p. L.M.C.), fourth day, engine trouble.

F. Dover (3½ h.p. Premier), fourth day, ignition troubles.

H. Berwick (3½ h.p. Humber), fifth day, buckled wheel.

F. W. Applebee (3½ h.p. N.S.U.), second day, belt rim came adrift.

A. P. Maurice (3½ h.p. Premier), fifth day, ignition trouble.

H. F. S. Morgan (8 h.p. Morgan runabout), second day, broken driving-shaft between clutch and gear box.

F. Smith (5-6 h.p. Clyno sidecar), third day, owing to ill health.

H. J. M. Hughes (6 h.p. N.S.U. sidecar), first day, failure to climb hill.

THE TEAM PRIZES.

The Douglas and P. & M. riders declared joint winners.

The findings of the judge, Professor Archibald Sharp, as to the performances of the various teams in the trial are as follow:

TRADE TEAM PRIZE.—The team of Messrs. Douglas Bros. and of Messrs. Phelon and Moore, Ltd., lost no marks for reliability, did not fail on any hills, and finished with the machines in good condition, and are bracketed as equal. The riders were: G. L. Fletcher, P. Phillips, and P. W. Moffatt, all riding 2½ h.p. twin-cylinder two-speed Douglas's; P. Shaw, W. Pratt and E. W. Merrall, riding 3½ h.p. single-cylinder two-speed P. and M.'s. Nine teams competed.

CLUB TEAM PRIZE.—The best performance was by the Yeovil and District M.C.C. team. Riders: P. W. Moffatt; (2¾ h.p. Douglas), Jack Baker (3½ h.p. clutch Triumph), and C. Williams (3½ h.p. T.T. Triumph). Baker failed three times and Williams once on the test hills. Four teams competed representing the N.W. London M.C.C., Herts County A.C., Sheffield and Hallamshire M.C.C., and Yeovil and District M.C.C.

A. Clark (Dene-Precision) ascending Keighley Gate, one of the steepest hills on Friday's route.

GENERAL IMPRESSIONS AND OBSERVATIONS OF THE TRIALS.

W. Cooper (3½ h.p. Bradbury) and S. Wright (2½ h.p. Humber) on the rough surface of Tan Hill. Both these competitors gained gold medals.

Undoubtedly the most severe six days' reliability trial not excluding the Scottish trial was the general opinion, yet thirty-three were successful in gaining the premier award.

At least half a dozen competitors lost gold medals owing to puncturing in close proximity to a control, and being late in arrival. Hard luck indeed!

The scenery was magnificent, although owing to the undulating nature of the course, and the myriad of twists and hairpin bends, necessitating a watchful eye on the road, competitors were unable to appreciate it to the full.

Which was the more unfortunate, to be obliged to retire on the first day or the last?

Brownstay Ridge, the last observed hill, is known locally as Bedlam—quite an apt naming, so the riders think.

Only four riders of single-gear machines successfully climbed the ten test hills. They are worthy of special mention: S. Crawley (3½ h.p. clutch model Triumph), H. E. Ashley (a private owner of a 3½ h.p. L.M.C.), S. T. Tessier (5 h.p. Bat-Jap), and E. Babington (7-8 h.p. Bat-Jap). One cannot sufficiently appreciate the merit of these performances without an inspection of some of the hills.

A competitor on Kidstones Pass. Note the loose condition of the surface.

Crawley and Babington lost their gold medals owing to punctures when nearing a control, Ashley retraced his wheel marks some two or three miles to act the part of Good Samaritan to another L.M.C. rider and was late in consequence at the next control, leaving Tessier, the solitary winner of a gold medal, with a single geared machine.

Until Friday there were four teams in keen competition for the special team prize without a single mark lost. They were the representatives on Zenith, Humber, Douglas, and P. and M. machines. Berwick's buckled wheel in crossing a gully at Keighley Gate, and Duke's failure on the very last test hill owing to screwing his gear so low that the free engine came into operation, were unfortunate accidents that would have tried the patience of Job.

Some of the unobserved hills caused more failures than others under official surveillance. This suggests the desirability of withholding any announcement as to the observed climbs in future, which would automatically put a stop to the practice of cooling engines at the foot of every test hill, and constantly altering gear ratios, tightening belts, and making other necessary adjustments.

W. Cooper and W. E. Grange used the first of the new Rom belts. They were of lin. section, and they told us that throughout they had given no trouble. Cooper also used Rom tyres, even the rear one of which was practically unmarked at the finish.

The check at Pickering. W. Creyton, W. F. Newsome, and J. H. Slaughter may be seen in the foreground.

The Triumph team used a new pattern Dunlop cover, the tread of which is composed entirely of lozenge-shaped rubber projections, the continuous central rib not appearing on the new cover.

W. Pratt's P. and M. is probably the fastest of its kind ever seen. It took the major portion of the test hills on top gear. We noticed a newly-designed double-barrelled piston-controlled carburetter with an ordinary single jet on the P. and M.'s. These machines were always spick and span, and glittering in the sunlight.

Petrol was only obtainable at famine prices on the last two days. Fortunately, Mr. Straight had made adequate arrangements with the Shell and Pratt's spirit agents beforehand, and, thanks to Mr. J. R. Baines, competitors were supplied to the end of the week and for their journey home at 1s. 9d. per gallon, although 2s. 6d. was Friday's local price and 3s. 9d. on Saturday. Mr. Baines did other useful work in superintending the erection of arrows.

The A.C.U. decided to rule out two checks at Driffield and Brough owing to the distances on the route card—which were taken from the C.T.C. route book—being wrongly stated

S. T. Tessier (5 h.p. Bat-Jap) climbing Scaarth Nick on Thursday last. Tessier was the only single-gearer to climb all hills and gain full marks.

Atkinson and Munroe shared twenty-five punctures on Friday's run alone, mostly caused by small stones. Their determination to keep going is another example of British persistency. It may be added that six minutes is the usual time lost in fixing a repair patch. How many tourists take less than a quarter of an hour?

Every day was fine and bright, and there was only half an hour's rain during the whole week. Competitors have never been so fortunate in this respect.

W. Pratt assured us that none of the P. and M. team suffered an involuntary stop throughout, excepting for two punctures in Shaw's back wheel.

The way the lightweight A.J.S., Douglas, and Forward machines climbed the test hills excited great admiration. The Enfields appeared to be over-gearer.

Slatter (Alcyon) and Holroyd (Motosacoche) are surely deserving of premier awards for completing such an arduous test on their small single-gearer single-cylinder machines. Slatter failed on both hills on Monday, but was successful on all the others. Holroyd, in addition, found Kidstones too steep for him, but both performances must be considered really wonderful. It was no course for lightweights.

A. J. Stevens (2½ h.p. A.J.S.) and J. Tassell (8 h.p. Matchless and sidecar) after rounding the bad corner on Keighley Gate Hill. Tassell failed a few yards further up owing to lack of petrol.

Thanks to the assistance of cars lent by Mr. J. R. Nisbet, Messrs. Humber, Ltd., Mr. Evans, Mr. John Gibson, Hutchinson Tyre Co., and the Kempshall Tyre Co., officials were taken wherever they wanted to go. Each test hill was efficiently observed at every point, and each morning a car preceded the men to see that the arrows were in place.

It was a big task for the A.C.U. officials each day, and the smartness with which the mass of figures was got through evoked general admiration. A little less grumbling on the part of the competitors at loss of marks would have pleased many.

On the second day a group of competitors, desirous of being in fashion, threatened to strike unless the times of the Brough check were ignored.

Though many were the complaints of the noise of some of the machines, the buzz of the Scotts was immensely appreciated. Of their reliability and sweet running we can speak from experience, as a 1911 3½ h.p. Scott carried our representative throughout the six days, with only two stops to clean the carburetter.

J. Tassell's Matchless-Jap sidecar ran most regularly. He wins *The Motor Cycle* private owner's medal for the second year in succession, but he had a most enjoyable run com-

J. Haslam (Zenith) at the right angle bend at Blubberhouses, leading to Otley. There were several failures here, as there is a steep gradient to surmount.

pared with last year's End-to-end on the same machine, when ill-luck with tyres dogged him almost throughout.

Sam Wright was another of the fortunate ones, his lightweight twin Humber never requiring a tool, repair outfit, nor even the belt shortened, which surely constitutes a record.

There were two cases of sidecar axles breaking, and in each case officials of the A.C.U. were more or less injured.

The performance of the Douglas team was undoubtedly most meritorious. For 2½ h.p. twins to climb such precipitous hills so consistently is indeed an achievement of which Messrs. Douglas Bros. may be justly proud.

As a test of accessibility it was intended to time a member of each team while he took out the rear wheel. R. W. Duke took out his Zenith wheel and refitted it in 11½ mins., Arter was also busy with a James, but here the matter seems to have ended, to the delight of the competitors who did not relish the work of providing such useful data.

The majority of the competitors returned to their respective homes by road last Sunday; for that matter, the train service was still very uncertain. Quite the biggest contingent were bound for Coventry and Birmingham. There were representatives of the Triumph, Rover, Douglas, Humber, James, and Enfield among a fast-moving section we accompanied along the Great North Road, but the ranks were considerably thinned at the finish.

TWO UNOFFICIAL TEST HILLS ON FRIDAY'S ROUTE.

On the hairpin corner of Keighley Gate Hill, which was included in Friday's route, and observed by "The Motor Cycle." The riders are P. J. Evans and S. Wright, of the Humber team. There were quite a dozen failures.

The following facts provide food for thought. A competitor who was awarded a gold medal finished with practically all the spokes missing from one side of his wheel. Another was included among the best, although he had a blowhole in his cylinder which hissed ominously. Several gold medal winners failed on one hill. Compare the two following cases: Young Crawley (still in his teens) climbed every hill with a single gear, and was but four minutes late at one control owing to a puncture. He only gets a silver medal, which fate also befel Rabington for precisely similar reasons. The obvious query is, "Which is the more serious—to fail on a test hill or to pick up a nail in the tyre?" The A.C.U. decide differently from everybody else.

A long-distance reliability trial for motor cycles with tool-bags sealed is suggested for next year, punctures not to count.

There were many quick changes of covers. Only half an hour was allowed each morning to prepare the machine for the day's run, it always being under lock and key from the finish to 7.30 next morning.

At the finish, we observed a number of badly battered rims, two or three brake and exhaust valve lifter wires snapped, tyre gaiters in position, spokes bent and missing, etc.

Everybody in Yorkshire called it a "race," and probably took more interest in the event on that assumption. Even a leading Yorkshire daily referred to the trial as "The Great Six Days' Motor Cycle Race."

After the trial a number of machines were weighed, and the figures may be of interest, although several were loaded up with spare cover, tube, and spare parts. Motosacoche, 130 lbs.; $3\frac{1}{2}$ h.p. Bradbury, 200 lbs.; $3\frac{1}{2}$ h.p. Zenith, 220 lbs.; Douglas, 155 lbs.; Enfield, 163 lbs.; 5 h.p. Bat, 253 lbs.; $3\frac{1}{2}$ h.p. clutch Triumph, 215 lbs.; Scott, 234 lbs.; James, 240 lbs.; $2\frac{3}{4}$ h.p. Humber, 159 lbs.; Alcyon, 138 lbs.; Rudge six-speed, 284 lbs.; $2\frac{3}{4}$ h.p. Forward, 161 lbs.; $2\frac{1}{2}$ h.p. A.J.S., 163 lbs.; L.M.C., 214 lbs.; $2\frac{3}{4}$ h.p. New Hudson, 166 lbs.

A cute Harrogate motor cyclist, anticipating the petrol famine, sold his motor cycle and bought as much petrol with the proceeds as he could store. Three days later he sold the whole lot at 4s. 9d. per gallon.

The successful Douglas team used Hutchinson tyres and Lyso belts, whilst the P. and M. team which tied with the Douglas had Kempshall tyres and Renold chains.

The railway strike at York proved an interruption to an otherwise uneventful day's run. Missiles were thick in the air at one time in the neighbourhood of the station, and one, so it is said, nearly hit a competitor.

Mr. G. N. Higgs has reason to be proud of the performance of the little Alcyon in which he is interested. It is true the machine failed on the two first test hills due to a maladjustment of the carburetter, but one this was put right by that capable rider, N. D. Slatter, the machine climbed everything in good form and made quite a creditable performance.

Luckily there are no flints in Yorkshire; were this the case the number of tyre troubles would have been appalling. There were enough as it was, in fact far too many, and there appears to be still room for improvement in motor cycle covers. It is difficult to say that one tyre is better than another.

In the open country competitors kept up a high average speed, sometimes to make up time after a stop, and sometimes to keep a little in hand in case of trouble. This fast driving adequately tested the machines, but there was too much of it, and something ought to be done to keep down the speed within reasonable limits. Probably next year surprise checks will have to be instituted, so as to catch those who are travelling in excess of 20 m.p.h.

Great credit is due to Major Nott-Bower, Chief Constable of the North Riding, for the splendid manner in which he placed his men at dangerous and doubtful points along the route. On Saturday constables with uplifted hand slowed down the men in certain villages, and waved them on again when the road was clear. All those who took part in the trials feel that they owe Major Nott-Bower a deep debt of gratitude.

Mr. P. G. Tacchi, the designer of the T.A.C. four-cylinder motor bicycle, informs us that the adjustable pulley fitted to the N.S.U. two-speed gear, mentioned in our issue of 17th inst., should be known as the T.A.C. adaptation. The device is Mr. Tacchi's design, and a limited number can be obtained from Messrs. Eagles and Company, Acton.

THE A.C.U. OFFICIALS.

The Auto Cycle Union officials to whom the success of the trial is due are mentioned hereunder: Chief marshal, Mr. J. R. Nisbet; judge, Mr. A. Sharp; marshals, Messrs. H. P. Beasley, J. W. G. Brooker, Victor Hart, A. S. Ross, and A. J. Macdonald; secretary, Mr. F. Straight; press steward, Mr. F. A. Hardy.

The hairpin bend at the foot of the steep climb leading to Skyrholme Moor. We observed thirty competitors fail at this corner, the gradient being approximately 1 in 6.

A NEW SIDECAR MACHINE.

THE great popularity of the sidecar has caused manufacturers to turn their attention towards the construction of special machines suitable for hauling these attachments. Singer and Co., Ltd., have just completed the construction of the first Singer sidecar machine with their own make of variable gear. This gear is of

Part sectional plan of the variable gear of the new Singer.

the counter-shaft type, and runs in an oil bath in an extension of the engine crank case; it also includes a multiple plate clutch on the engine-shaft. Reference to the part sectional line drawing of the crank, clutch, and gear cases, which are formed practically by one self-contained casting, shows that the engine-shaft A is extended some distance to the left, and carries on it the plate clutch B. This plate clutch has been so designed that it can be removed bodily in its housing from the engine-shaft in five minutes and replaced in the same

time. We saw it done in less, but we are making an allowance for shop appliances. This is an immense advantage. Surrounding the plate clutch case C is a pinion D, which drives a pair of wheels EF running on a spindle H. These wheels are constantly in mesh with two other gear wheels J and K mounted on the spindle L, which is the final countershaft, carrying on its right extremity the belt pulley M. In addition to the wheels J and K on the shaft L there is a sliding dog clutch N. This dog clutch is, of course, keyed to L and revolves with it, but is free to move laterally. When it is moved to the left it locks J to the countershaft; when moved to the right K is rigidly attached to the same shaft.

This arrangement of gear wheels and number of teeth in them allow for a reduction in the box between the engine shaft and the countershaft, and by fitting pulleys of various diameters one can obtain gear ratios of considerable variation. e.g., with a 6 $\frac{1}{2}$ in. pulley and a 20 in. belt rim the top ratio is 4 $\frac{1}{2}$ and the bottom 6.38 to 1; with a 5 $\frac{1}{2}$ in. pulley 5.22 and 7.35 to 1; and with a 5 in. pulley 5.76 and 8.12.

The 1911 $\frac{1}{2}$ model Singer with bottom bracket two-speed gear.

Another interesting feature of this gear is the starting clutch, which is made just like the handle starting used for cars and some motor cycles, but is adapted for pedal instead of manual propulsion. The pedal axle chain wheel is frictionally mounted on its shaft, so that in the event of a back-fire the engine would turn the chain wheel backwards.

Lubrication has been provided for by oil ducts between the engine crank case and the gear box.

Now to describe how the gear changes are operated. On the right of the handle-bar an inverted lever and Bowden cable are connected to the crank O, so pushing inwards the clutch release pin P and compressing the clutch spring Q. This crank has an adjustment by means of a set-pin and lock-nut S. To start the machine from a standstill with the back wheel resting on the ground, the moment the clutch is withdrawn, the gear striking handle, which is carried in a bracket firmly secured to the tank, is pushed from the rider and the low gear slips in without a sound. It must, of course, be placed in the central or neutral position before starting the engine.

To obtain the high gear, the inverted lever on the handle-bar is again lifted and the striking handle turned towards the rider. The striking handle and rod are connected to the pinion T which engages with the rack on the striker shaft U. Several detail improvements are still to be made, but the machine was sufficiently far advanced for us to ride it twelve or fifteen miles as a solo mount. The gear changes with the greatest of ease, and the plate clutch picks up the load excellently. There is no shock or jar in the transmission, and with a gear ratio of 4 $\frac{1}{2}$ to 1 the machine will ascend a 1 in 12 hill with a twelve stone rider at a speed equal to an ordinary belt-driven mount of equal power, thereby proving that there cannot be very much internal friction in the gear.

The large driving pulley is shown in this illustration. The pedal chain is connected to the crankshaft.

CURRENT CHAT

TIME TO LIGHT LAMPS

" 30th	..	7	49 "

Military Motor Cyclists.

On account of the cancellation of the military manoeuvres the War Office has notified motor cyclists that their services will not be required.

The Next Open Hill-climb.

Another class has been added to the Coventry and Warwickshire M.C. hill-climb programme. Class '7 will be for all comers, to enable single and twin-cylinder machines to compete together, and also fixed and variably geared machines. They may be stripped or otherwise. Entries close this week at ordinary fees. to Mr. Geoffrey Smith, 19, Hertford St., Coventry.

The International Matches at Brooklands.

Readers will remember that we published the dimensions of De Rosier's racing Indian immediately after the international matches at Brooklands. We were unable to publish the capacity of C. R. Collier's Matchless-Jap as it was not measured. The J.A.P. has now been calibrated by Mr. T. W. Loughborough the bore being 90 mm. and the stroke 78.4 mm., which means 988 c.c.

Phenomenal Consumption.

A competitor in the Glasgow M.C.C. petrol consumption trial on the 19th inst. rode thirty-five miles on a $3\frac{1}{2}$ h.p. T.T. Triumph with a consumption of 277 miles to the gallon. This must be a record. The second man on an Ariel rode 206 miles per gallon, and the third on a $2\frac{3}{4}$ h.p. Douglas 198 miles per gallon.

The rules read: "Competitors will be provided with petrol at the rate of one pint for 300 lbs., one and a half pints for 600 lbs., and two and a quarter pints for 1,200 lbs.

The Six Days' Lightweight Record.

H. V. Swift, who started for the six days' ride, had the misfortune to run into some cattle when taking a crossing in the dark, and in the smash following he damaged the side of his engine. When the repairs are finished, he informed our representative of his intention to make a fresh start, as his little Douglas ran without any trouble all the time, and at the time of the collision he was well within the record time, and as he had been riding for twenty hours in heavy rain, and over the Welsh section of his task, it speaks well for the quality of his machine.

SPECIAL FEATURES

THE SIX DAYS' TRIALS IN YORKSHIRE.

Graphic Description Numerous Illustrations, and Official Results.

TESTING A NEW TWO-SPEEDER. A NEW SINGER SIDECAR MACHINE.

Amulree Open Hill-climb.

Mr. Percy Tolfree, 47, Falcon Avenue, Edinburgh, has been re-appointed hon. trial secretary in connection with the Edinburgh and District M.C. open hill-climbing on Amulree, on September 18th.

Six Days' Trial Results.

The official results of the above strenuous trial appear on page 880b. As is our usual custom, the thirty-three gold medal winners have been arranged first for ease of reference, the names of the twenty silver medal winners coming next, and the eleven bronze medallists last.

Strike Items.

Seven shillings and sixpence a tin was the usual price for petrol last week-end. Motor cyclists on tour could be seen with two-gallon tins of petrol strapped to their carriers.

Visitors to the seaside who had motor cyclist friends and acquaintances and found it impracticable to return home by train last Saturday, found a seat on more than one motor cycle carrier. More converts to the pastime are expected as a result of the strike.

A large firm of cinematograph operators employed a corps of motor cyclists during the recent strike for the purpose of distributing their films to various towns in the North of England.

Non-stop Trial in Wales.

Under the auspices of the Shropshire M.C., a non-stop run to Lake Vyrnwy and back to Shrewsbury was held recently. Only three riders made non-stop runs. The winner proved to be C. R. Oxley ($3\frac{1}{2}$ h.p. Triumph) with 10 $\frac{3}{4}$ m. error in time, followed by H. G. Potts (5 h.p. F.N.), and J. Payne (5.6 A.C. tricar).

Showing the operating levers of the new Singer two-speed and free engine machine, described on the previous page.

Coventry Club's Annual Welsh Run.

The above run was held on Saturday last from Coventry to Aberystwyth via Worcester, Leominster, and Devil's Bridge, and proved most enjoyable. Fourteen competitors left Coventry from 7 a.m. onwards, being started in pairs at one minute intervals. Within a few yards of the starting point two companies of the Munster Fusiliers were met marching into the city to safeguard the property remaining undelivered at the railway station owing to the strike. Lunch was taken at Leominster; tea at Devil's Bridge. All completed the distance within the schedule time of 11 $\frac{1}{2}$ hours, including three hours' compulsory stops for meals.

The return journey was made via Llandloes, Newtown, Clun Valley, and Ludlow next day.

The run was voted a great success, and no one reported delay, except from punctures.

The Six Days' Trials.

An analysis of the surviving machines in last week's 1,000 miles trial will prove instructive to students of design.

The Olympia Show.

While we are in the throes of the Six Days' Trials, and there remain several weeks of summer weather, it will perhaps sound premature to talk about the show, but we have pleasure in stating that the whole of the space, with the exception of a few stands in the Annexe, has been allotted, and readers may look forward to a record exhibition next November.

Reflex Rear Lights.

The popularity of the offer made by the A.A. and M.U. to distribute 10,000 reflex rear lights free to pedal cyclists is evidenced by the fact that, although the announcement of the Association's intention was only made a month ago, over 10,000 applications for the lights have been received. The list is therefore now closed, and the reflex lights are being sent out as fast as delivery can be obtained. Every care is being taken that the applications are dealt with strictly in the order received. Those applicants whose requests have arrived too late will be notified to that effect.

Turner's Hill, Sheffield.

In our last issue we illustrated Mr. F. Dover climbing Turner's Hill, Sheffield, and accepted our correspondent's statement that this was the first ascent of the hill made on a motor cycle. We have received two letters pointing out the inaccuracy of this statement, and from them it appears that this freak hill was first climbed on Good Friday in 1909 by Mr. C. Wightman, of Sheffield, on a $3\frac{1}{2}$ h.p. Triumph. The Rudge-Whitworth Co. also write that in the presence of several witnesses, whose names and addresses they give, Alan Hill negotiated the hill on a $3\frac{1}{2}$ h.p. Rudge on March 29th last.

Reliability Trial in North Devon.

In our issue of August 17th, under the above heading, Captain E.P.M.T. referred to the M.C.C. standard reliability trial as not being the first to be held over the North Devon route. To clear up any pos-

sible mistakes in the future, Mr. H. Karslake writes us to the effect that the M.C.C. was the first recognised club to organise a trial over this route, that its inclusion in the M.C.C. programme for this year was referred to by the motor cycle press long before Easter, and that the club which first includes a trial in its programme for the year is entitled to a prior claim for originality. It may be added that Mr. I. B. Hart-Davies has several times similarly conducted parties of friends round the hills of Somerset and North Devon, and this was during the last four years, long before the M.C.C. trial was formulated.

FUTURE EVENTS

- Sept. 2—M.C.C. Members' Hill-climb.
 „ 2—Coventry and Warwickshire M.C. Annual Open Hill-climb.
 „ 5—Torbay M.C.C. Annual Open Hill-climb.
 „ 16—Auto Cycle Union Inter-club Championship, in the Midlands.
 Oct. 12—The Motor Cycle Special Colonial issue.
 „ 14—A.C.U. Quarterly Trial (Midland centre) fourth and last of 1911 series.

Southampton to Aberdeen by Motor Cycle.

Mr. Ernest Frasseti wrote to us on Saturday last that he had such confidence in his Indian and sidecar that he intended to travel by road from the Hippodrome, Southampton, to Aberdeen after completing his engagement on Saturday night. There is a great difference between a trip of this kind and one undertaken for pleasure, as it was absolutely essential that he should reach Aberdeen in time for rehearsal on Monday morning. Mr. Frasseti accomplished his object, as in spite of serious lamp trouble he was able to send us a telegram from Aberdeen announcing his arrival there early on Monday.

Climbing the Wrekin.

A. L. Ommaney, who made a successful ascent of the Wrekin Hill—the performance was referred to in "Current Chat," last issue—informs us that he did ride a Rudge variably-gear machine, but the ratio was fixed, and he did not alter it from about 6 to 1, which was the lowest gear but one he could obtain. The machine weighed complete 240 lbs., and the rider 11 stones 10 lbs. Ommaney told us that at the first attempt his front wheel struck one of the protruding rocks in the second gorge near the summit, and he fell, but got up the whole lot at the second trial, steering to the left of the rocks through the first gorge. This brought his tracks on to the dry grass, but he nevertheless succeeded in getting up. The climb was witnessed by five or six motor cyclists, who were clamorous to obtain Ommaney's autograph. He rode down from top to bottom with a lady on the carrier, who must have had considerable confidence in the steersman, as the descent is no child's play. The surface, owing to the continued drought, was, of course, as bad as ever.

Illumination of Number Plates.

The reports published in the daily papers that a motor cyclist of the name of H. Hunter had been convicted at Cobham for not having his rear number-plate illuminated has resulted in many statements reaching us to the effect that such a conviction is illegal. Mr. Hunter informs us that the daily papers were in error, and that he was charged and fined for having his front number-plate placed crosswise. We sympathise with Mr. Hunter in the treatment he received, as it is hard lines to suffer for a trivial matter, but it should be observed that a front number-plate placed crosswise is difficult to illuminate. Then again, in some districts it is hardly safe to be seen with a motor of any kind. Surrey is becoming known for burglaries and assaults on children. *Verb. sap.*

THE SIX DAYS' TRIAL IN YORKSHIRE.

H. Berwick ($3\frac{1}{2}$ h.p. Hummer) followed by W. Creyton ($3\frac{1}{2}$ h.p. Triumph) on Kidstones Pass last Thursday.

O. C. Godfrey (7 h.p. Indian and sidecar) at the top of Brownstay Ridge. His mother is the occupant of the sidecar.

SPEED TRIALS AT CLIPSTONE.

Open Race Meeting organised by the Nottingham and District M.C.C.

THE above trials were held on a mile course in Clipstone Park last Saturday afternoon, the weather at the start being glorious.

The first event was the Club Handicap, the prize (a gold medal) being won by J. H. Watson (3½ h.p. Triumph). The winner of the second event—scratch race for touring models—proved to be H. C. Newman (3½ h.p. Ivy-Precision), who covered a mile in 1m. 0½s.—an average speed of 59.2 miles per hour. J. H. Watson (3½ h.p. Triumph) again proved his racing abilities by securing the prize for the scratch race for I.T. machines. In the scratch race from a standing start, which followed, George Brough (two-cylinder Brough) gained first place. In his heat, however, he was beaten by F. P. Johnson (two-cylinder Matchless), who was disqualified, thus letting the former in for the second round. The last event of all was the special time trial, in which each competitor had a separate run down the course to attempt the record, which is at present held by H. D. Shaw—77 m.p.h. This was not, however, accomplished, George Brough (Brough) being the nearest with 48s.—only 1½s. on the wrong side. L. Smith blew the cylinder head off his Bradbury, and, of course, could not ride. F. P. Johnson (Matchless-Jap) was travelling at a good speed when his wheel got into a rut, with the result that the tyre was wrenched off, and caused a bad spill. Fortunately Johnson was not injured.

F. Johnson at full speed. The photograph was taken just before his front tyre came off, when travelling at nearly 70 m.p.h.

Premier); J. H. Watson (3½ h.p. Triumph) beat H. B. Halford (3½ h.p. Rover).

Second round.—Mitchell beat Newman; Spencer beat Cox; Watson, bye.

Third round.—Mitchell beat Spencer; Watson, bye.

Final.—J. H. Watson beat J. D. Mitchell.

Event 4.—Open Scratch Race.

Heats.—L. Smith (3½ h.p. Bradbury) beat A. F. Cullen (8 h.p. Bat); Geo. Brough (7 h.p. Brough) beat F. P. Johnson (8 h.p. Matchless); W. S. Spencer (3½ h.p. Rudge) beat H. Dawson (3½ h.p. Bradbury); J. D. Mitchell (3½ h.p. Triumph) beat R. A. Johnson (3½ h.p. Premier).

Second round.—Brough beat Smith; Mitchell beat Spencer.

Final.—Geo. Brough beat J. D. Mitchell.

Event 5.—Special Mile Time Trial.

	m. s.	m.p.h.
Geo. Brough (7 Brough) ..	0 48	75
W. S. Spencer (3½ Rudge) ..	0 49½	72.58
H. C. Newman (3½ Ivy-Precision) ..	0 52	69.23
J. D. Mitchell (3½ Triumph) ..	0 52½	68.96
R. S. Buckman (7-8 Buck) ..	0 52	68.70
A. F. Cullen (8 Bat) ..	0 55½	64.51
R. A. Johnson (3½ Premier) ..	1 0	59.4

Brough rode magnificently, and came near to beating record. Stanhope Spencer's speed of 72.58 is several miles per hour faster than the previous best single-cylinder time.

The final heat. Left, J. Harrison Watson (3½ h.p. Triumph), who beat J. D. Mitchell on a similar machine.

In the second event, H. C. Newman and Victor Pratt, both Ivy-Precision riders, were drawn together, but Pratt yielded up his place to his *confrère* in the final.

The following is the tabulated list of results:

Event 1.—Club Handicap.

Heats.—F. P. Johnson (2½ h.p. Humber) beat B. Blanksby (2½ h.p. Douglas); A. E. Lole (4-cyl. F.N.), bye; H. Dawson (3½ h.p. Bradbury) beat A. F. Cullen (8 h.p. Bat), scratch; J. D. Mitchell (3½ h.p. Triumph) beat R. S. Buckman (7-8 h.p. Buck); E. S. Brittain (3½ h.p. Rudge) beat R. A. Johnson (3½ h.p. Premier); J. W. Cox (3½ h.p. Triumph) beat H. B. Halford (3½ h.p. Rover); J. H. Watson (3½ h.p. Triumph) beat N. O. Soresby (3½ h.p. Rudge).

Second round.—Dawson beat F. P. Johnson; Lole, bye; Mitchell beat Brittain; Watson beat Cox.

Third round.—Lole beat Dawson; Watson beat Mitchell.

Final.—J. H. Watson beat A. E. Lole.

Event 2.—Touring Class Open Scratch Race.

Heats.—H. C. Newman (3½ h.p. Ivy-Precision) beat W. S. Spencer (3½ h.p. Rudge); Victor Pratt (3½ h.p. Ivy-Precision) beat N. O. Soresby (3½ h.p. Rudge); R. A. Johnson (3½ h.p. Premier) beat Harold Petty (3½ h.p. Rex).

Final.—H. C. Newman beat R. A. Johnson

Event 3.—Tourist Trophy Class (Scratch).

Heats.—H. C. Newman (3½ h.p. Ivy-Precision) beat F. P. Johnson (4 h.p. Matchless); J. D. Mitchell (3½ h.p. Triumph) beat N. O. Soresby (3½ h.p. Rudge); J. W. Cox (3½ h.p. Triumph) beat E. V. Pratt (3½ h.p. Ivy-Precision); W. S. Spencer (3½ h.p. Rudge) beat R. A. Johnson (3½ h.p. Premier).

THE FINISH OF THE SIX DAYS' TRIALS.

Competitors signing the checking sheet at the finish of the most severe trial ever organised. The group in the photograph are Owen Wells, T. C. Atkinson, Jesse Baker, and C. S. Burney. Mr. Herbert Syner was in charge here.

WEEK-END EVENTS.

Mersey M.C.C. Hill-climb.

We have been asked to announce that the Mersey M.C.C. are compelled to cancel the open hill-climb fixed for August 26th, owing to the inability of the committee to obtain a suitable hill with the necessary permission to use it for the purpose advertised.

Hartlepool and District M.C.C.

The result of the reliability trial from West Hartlepool to Keswick is as follows: 1, J. J. Clark ($3\frac{1}{2}$ h.p. Triumph), winner of the Palmer tyre, presented by the Palmer Tyre, Ltd.; 2, H. Durkin (four-cylinder F.N.); 3, Eric Forslund ($5\frac{1}{2}$ h.p. Zenith). The competition was carried out under adverse weather conditions, heavy rain falling practically the whole of the journey.

Chesterfield and District M.C.C.

The official results of the hill-climb which was held at Stone Edge on the 19th inst. were as follow, events 1 and 2 having to be abandoned for lack of entries:

Event 3 (novices, open).—G. H. Hall ($3\frac{1}{2}$ h.p. Triumph).

Event 4 (members).—W. H. Woods ($3\frac{1}{2}$ h.p. Triumph); fastest time, L. Smith ($3\frac{1}{2}$ h.p. Bradbury)

Event 5 (members).—L. Smith ($3\frac{1}{2}$ h.p. Bradbury).

Event 6 (open, singles, 600 c.c.)—L. Smith ($3\frac{1}{2}$ h.p. Bradbury).

Event 7 (open, singles, unlimited).—G. Brough (7 h.p. Brough).

Fastest time of the day.—G. Brough (7 h.p. Brough), 35 $\frac{3}{4}$ s.

Fastest single-cylinder.—L. Smith ($3\frac{1}{2}$ h.p. Bradbury), 38 $\frac{3}{4}$ s.

The length of the hill was half a mile.

Competitors in the Chesterfield and District Open Hill-climb at Stone Edge. The riders are: L. Smith, W. H. Woods, J. J. Kelly, George Brough, E. Kelly, R. A. Johnson, and E. S. Brittain.

How to Remove an Obstinate Pulley.

THE other day the writer had occasion to remove an engine pulley which had run upwards of a thousand miles. The pulley in question was on an N.S.U. engine, on the shaft of which is cut two keyways.

Removing a pulley with a garden fork.

This holds the pulley as firm as a rock; in fact, so firmly that it requires considerable force to remove it. To overcome this difficulty, the makers have constructed an outer nut which screws on to a boss on the pulley and screws it off without difficulty. In the writer's case it was a two-speed pulley which has not any means of detachment. Having unscrewed the locking nut, the

usual methods were employed for the removal. The engine was run on the stand for some minutes, but the pulley remained as firmly fixed as before. Wedges between the crank case and pulley were next tried without success. In desperation an iron crowbar was next tried, by the use of which the crank case was badly scratched and indented, and having no proper pulley drawer or access to a garage possessing such a tool, the writer was at his wits' end how to remove the pulley. The machine was then ridden for six miles with the lock-nut unscrewed, but at the end of the run the pulley was still as firm as ever.

Then a bright idea struck him, and, as the photograph illustrates, this was nothing more or less than a garden fork or prong. This was placed between the belt flanges of the pulley, and one or two smart taps

were given about half-way up the handle of the fork with a heavy hammer. The pulley came away at once. This procedure cannot possibly damage the crank case, as there is no leverage placed on the engine at any point, it all being between the pulley flanges. If the fork is long enough, its points may be stuck in the ground and tapped, as this gives additional leverage.

In the writer's case, this method removed in two seconds a pulley which had defied all other methods for a whole morning, and has never failed to act with other pulleys. In the illustration a plain pulley has been used to show the method more clearly. He has

A.C.U. SIX DAYS' TRIALS.

C. C. Cooke (3½ h.p. Triumph), at the finish last Saturday afternoon. A large crowd collected to see the survivors' return.

since found that if the garden fork prongs are inserted between the back of the pulley and crank case and the top of the handle of the fork tapped smartly with a hammer, the pulley will at once come away. This method, however, places a strain on the crank case, and is only an alternative method for those whose pulleys are too big to allow the fork to pass down between the belt flanges.

PLAIN TALES OF THE HILLS.

As told by a Successful Trials Competitor.

I've come from Yorkshire highways, I've ridden thro' its dales,

Of its steep and stony mountains I can tell you many tales. On the first day Wass and Sutton were the worst I ever saw, Such surface as on Punchards was ne'er met before. Until with engine roaring on my steed so strong and quick, I romped up Searth's acchvity which there they call the Nick. Garrowby was nothing, nor the bank they call the Blue, But Greenhow Hill and Kidstones were stiff, twixt me and you.

When Kids were non-existent, but stones there were galore. Fill the sweeper came and swept 'em, and there still seemed all the more.

As to Heaton in the Woodland, its stiffness ceased to be, But Keigney Gate and Skyreholme, which the judges did not see,

As the steward said of Zotos, they nearly did for me. With the hill best known as Brownstay my story I will close, As my gallant mount soared skyward I sang as up I rose, For I'd conquered all the steepest of those very dreadful hills, And I never suffered punctures or any other fearsome ills. All that's left to tell you is I'm happy as a cricket To think my sturdy steed and I were good enough to stick it.

A.C.U. SIX DAYS' TRIALS.

F. Philipp (Scott) finishing the ascent of Greenhow Hill, Pateley Bridge.

Testing a New Two-speeder.

By B. H. DAVIES.

IT was obviously my bounden duty to buy a 4 h.p. single-cylinder Indian two-speeder for 1911, seeing that nearly six years ago I suggested in these columns the possibilities of the very gear box this machine embodies as applied to solo work. I get few opportunities of long rides nowadays, but luckily within a week or two of delivery urgent matters compelled me to ride from Northampton to Devon and back. I always like to give a new machine a thorough grueling as soon as possible, comprising if possible a day's ride at high speed and a second day of sheer heavy mud-plugging. Some riders term this process "breaking in the machine," and, of course, it is a fine method of unearthing any weaknesses of design or construction. But I prefer to regard it as "breaking in the driver," for personally I find it takes me some time to become accustomed to a novel mount, and not for 200 or 300 miles does that centaur-like feeling arise which betokens that I and my jigger understand each other.

Advantages of a Change-speed Gear.

Rain was falling in torrents when I left home at 6 a.m., and the value of a change-speed gear was at once manifested. The owner of a single-geared machine would usually, after wrapping himself in eight bearskins and an oilskin at such an hour on a cold morning, discover that his petrol squirt was in the innermost pocket; and after re-dressing himself he would become what Mantalini used to call "a demned moist unpleasant body" in maintaining a ten mile an hour trot to get started.

With a two-speeder you don't bother about injections; you just walk powerfully alongside the stone-cold machine for one yard, and it's off! The rain cleared off after Oxford, and except for dodging milkcarts amid the slimy tramlines of St. Aldate's, and circling round one or two forgotten signposts, I might almost as well have been on a single gear; the one constant advantage of a two-speeder is that you use the machine as a chair when you stop to light a pipe or mop your goggles, and paddle it off again with your feet, without ever quitting the saddle. As the roads dried up, I decided the day befitted the speed test rather than the mud-plugging, and I drove it down to Torquay a trifle in excess of End-to-end record pace.

The Engine developed a Mysterious Thirst.

Only two incidents marked the westward run. The first was the sudden development of a mysterious thirst on the part of the engine, which sopped up $1\frac{3}{4}$ gallons of petrol in the eighty miles between Newbury and Yeovil. I cannot account for this, as I could not detect either flooding or leakage, but anyway the tank ran dry at the foot of a hill just outside Yeovil, and I had to push in. Here the low gear scored, for instead of pushing off uphill, I started downhill without an effort, turned round in the street, and went back uphill.

The second set of incidents occurred on leaving Teignmouth up Shaldon Hill; I had forgotten the severity of the bends, and, in scrapping a biggish ear up the hill, had reason to be grateful for the excellent design of the Indian steering. I diversified the ride by once driving for five miles on the low gear, throttle full open and cut-out shut, till I came to the foot of a long steep hill, where the high gear was slammed in, and the engine accelerated as if it had just had ten seconds' warning for a timed hill-climb. But on good roads in decent weather the low gear seemed a comparatively useless appendage.

Incidents of the Return Journey.

The return journey was destined to prove much more exacting. I wanted to reach Northampton early on Saturday, so left Torquay in sunshine at 4 p.m. on Friday with the idea of sleeping at Lyme Regis.

Before long the rain came down in solid lumps. I rode *via* Teignmouth, and found the use of a low gear when tackling the Haldon Road. Coming from Shaldon, it twists sharply round the corner of a small church, and shoots up for a mile over a steep shoulder. The corner was blocked by two carts and smeared with grease, but I ambled gently round on the low, banged in the high, opened up, and disappeared like a rocket over the summit, where I ran into the heaviest storm I have struck for years.

The engine presently gave a despairing cough and stopped, as it had not been "readied for rain." Diagnosis proved the carburettor was full of mud and water, as I had lost the cap over the float needle; the plug was shorting; the high tension terminal on the magneto and the switch were shorting. As fast as I dried one part another got sopped, and I draw a veil over an extraordinarily prolonged drive into Exeter, consisting of stoppages under every bush and bridge to dry out, followed by a short, mad sprint and another drying effort.

A Haven of Rest in a Country Inn.

In Exeter I dried the machine throughout, protected the terminals with vaseline, and made a new cap for the float needle, but still the machine would not start, though each test proved, with the most relentless logic, that there was nothing wrong. At last I hit on the trouble. My spare plug was not a Hedstrom, and though it screwed easily into the orifice provided, one of its points was shorting against the internal metal of the cylinder. Hence, there was a fine spark when the plug was out, but none at all when in.

It was now only a minute or so to lighting up time, and I was only carrying a toy lamp which was uncharged. Hating to sleep in a town, I pushed on lampless in the gathering gloom in search of a country inn. Pub after pub I paused at, but all were full, and nobody could supply me with even a pinch of carbide.

Testing a New Two-speeder.—

Finally, after the breathless descent of a twisty and precipitous hill in Tartarean inky darkness, I arrived at a haven called Newton Poppleford, where the Cannon Inn did me more comfortably and cheaply than I have ever been done at an English inn before.

Arrayed in some of the landlord's clothes, I devoured a gorgeous supper, and then went out to clean the red Indian.

The Real Joy of a Two-speeder.

Next morning I was faced with many miles of treacherous slime and mud plugging along the greasy roads of Devon and Dorset; I frankly own that on a single gear I should have funk'd the climbing of several precipitous hills on the treacherous grease, especially where the road turns callously back upon itself under trees up a 1 in 6 grade, as is the wont of roads down West. Good examples are the right-angle turn half-way up Trow Hill, and the awkward start of the hill out of Lyme Regis, which begins in an exceptionally narrow, crowded, slippery, and cambersome street.

Here the real joy of a two-speeder became manifest. I could circle these dangerous bends with trailing hob-nailed boots serving as Jacknosed, and presently bang in top and shoot away up the straights. But I blush to say that during the morning's skating practice I twice failed up hills on the low gear; of course, it was only the work of a moment to push off again, but it was considerably disquieting to be baulked on the low gear of a 4 h.p. by very ordinary single-figure grades.

I began thinking furiously, and before the third stiff mountain loomed up the secret was out. Two things were afflicting me. The first was weak mixture, due to the spare jet being smaller than the original. The Indian automatic carburettor widens its choke tube as you open the throttle; the result was I got a weak mixture when I most needed strong stuff. The second was that the automatic oiler had struck work, as the first shove of the hand pump proved. I did not enquire why, for the pump was already buried under four inches of clogged Devon loam, so I was content to use the hand pump at intervals; nor did I bother to reamer

out the spare jet, but only opened the throttle one half, so retaining the narrow choke tube.

After this all went as merrily as a marriage bell till I ran over a packet of pins and perforated my rear tube all the way round. This, of course, occurred in another heavy storm, when repairs were no joy.

In spite of these mishaps, I easily averaged a speed in excess of legal limit between Newton Poppleford and Northampton. Herein shows the contrast between trial riding and freelance work. The tiny troubles I encountered—a drop of pinhole punctures, the shaving of a tiny whorl of rubber off a G. and J. tyre valve, water in my carburettor, fitting a small jet, and an unsuitable plug, would each have sufficed to rob me of a gold medal in a scheduled trial, but in a freelance record ride not one of them need have been reported. Now let me pay my tribute to the Indian's excellences.

Her engine is magnificent from a tourist's standpoint. It needs no humouring and will never run hot. Its gear is simply ideal for a chain-driver; there are only two chains, and each possesses its own simple and positive adjustment; each is encased, and the front chain in particular does not even require cleaning after 450 miles in the mud. The clutch is not a substitute for a variable gear, and could never vastly increase the hill-climbing capacity of a single gear, but it answers admirably for its proper purposes—starting from rest, free-wheeling, and gear-changing.

A Clutch Test.

My pet test of a free engine clutch is as follows, but I do not recommend everyone to try it, as the consequences might be serious if the clutch for any reason refused to slip or was too tightly adjusted: Free-wheel as fast as you dare down a steep hill; towards the bottom let the clutch in with a bang against full engine compression, if you can remain in the saddle, the clutch is a good one, and accurately adjusted. I found the Indian would stand this test. The spring fork leapt at one bound into the list of the two or three really satisfactory forks I know. It levels up the road without a *souppçon* of bouncing, and it steers as easily and as truly as a straight, rigid, racing fork.

CLUB NEWS.**Pontefract M.C.C.**

A speed-judging competition, over a secret course of twenty-four miles, was held on August 17th. The following finished within two minutes of their correct time: 1, Will Bentley (3½ h.p. Triumph and sidecar), 15s. early; 2, H. Craven (Chater-Lea and sidecar), 30s. early; 3, Dr. Moxon (3½ h.p. P. and M.), 105s. slow; 4, H. Holmes (3½ h.p. Triumph and sidecar), 120s. early; 5, H. Bentley (3½ h.p. Triumph and sidecar), 120s. late.

Fleet and District M.C.C.

A hill-climbing contest against the Winchester, Southampton, and Eastleigh M.C.C.'s was held on South Harting Hill on the 16th inst., the results being decided on the A.C.U. formula, and the side whose six best performers secured the best average figure of merit being declared the winner. The fastest times were made by S. T. Figg, of Fleet, on a 5 h.p. Indian, and C. C. Rolph, of Fleet, on a T.T. Premier. The latter made a splendid ascent, and took the corner better than any other rider. T. Dear, on a Rudge, a member of the Hampshire team, got up in 54½s., and secured the best performance on formula. In the result, the Fleet club proved somewhat easy winners. A Bradbury v. Triumph contest which was on the programme failed to materialise owing

to a shortage of Bradburys, and a Triumph v. Indian was substituted. This was decided on time alone, and the Indians just won, chiefly owing to the performance of S. T. Figg, who climbed the hill in 52s. Great credit is due to the officials for the promptitude with which the event was run off, and the formula results announced.

Rider, machine, and club.	Time.	Place on formula.
S. T. Figg (5 Indian), Fleet ...	53s. ...	10
C. C. Rolph (Premier), Fleet ...	53s. ...	3
T. Dear (Rudge), Hants ...	54½s. ...	1
C. F. King (Bradbury), Fleet ...	55½s. ...	4
S. B. Wilks (5 Indian), Fleet ...	56½s. ...	5
N. Kennedy (Triumph), Fleet ...	56½s. ...	2
A. A. Longley (5 Indian), Fleet ...	58½s. ...	9
S. Smith (Triumph), Fleet ...	63½s. ...	6
T. E. Little (Triumph), Fleet ...	64½s. ...	7
W. J. Harrison (Premier), Hants ...	87s. ...	8
E. Ingram (Triumph), Hants ...	122½s. ...	11
J. Tuffin (5 Indian), Hants ...	Failed	
A. Nelson (Kerry-Abingdon), Fleet	Failed	

Average figure of merit.—Fleet, 208, 1st; Hants, 273.

Best performance on formula.—T. Dear (Rudge).

Club News—

Essex M.C.

The annual gymkhana has been arranged for the 26th inst., of which particulars may be obtained from Mr. S. G. Edwards, 100, Mount Pleasant Lane, Clapton.

North Middlesex M.C.C.

Final arrangements are now being made for the inter-team competition with the North-west London M.C.C. on Saturday, August 26th. It will take the form of a reliability trial, probably including the ascent of one or two steep hills.

Mersey M.C.

On August 27th team trials will be held for teams of three for Mr. Lake's prizes. Meet Rocket Hotel, Broad Green, for Buxton, *via* Warrington, Knutsford, and Macclesfield, returning same route. The start is at 10 a.m.

Oxford M.C.C.

Owing to the holidays the hill-climb arranged for September 9th will be postponed until a later date. Several new members have been elected during the past few weeks, the total membership now being 152.

Durham and District M.C.C.

Another hill-climb was held on Jubilee Bank, Willington, on August 2nd, for the Triumph gold medal, and the following are the results:

	Fig. of merit.
1. R. B. Smith (Ariel)	70.7
2. F. Turvey (T.T. Triumph)	79.2
3. A. Clark (Dene-Precision)	80.2

This event was followed by a slow climb on the same hill for the club silver medal, and was won by W. P. Cross (Bradbury), 3m. 37½s.

Liverpool A.C.C.

An amusing competition was held on August 12th in the form of a crock hill-climb. The machine provided was a 4 h.p. Hamilton, and the rider to take it the farthest up the hill, without l.p.a., was to be the winner of the total entry fees. An interesting feature of the competition was that two lady members of the club also rode the "crock" sitting side-saddle. The winner proved to be Mrs. Baxter with E. Hardisty as runner-up. The club are holding a run to Bettws-y-Coed on August 20th, starting from the landing stage at 9 a.m.

Norwien and District M.C.C.

On the 8th inst. the second annual motor cycle race meeting was held at Great Yarmouth. The card comprised six events, and it is somewhat remarkable that every event was won by the same rider, A. W. Lincoln (3½ h.p. T.T. Triumph). Although the number of spectators was not very large the meeting proved very successful and reflects the greatest credit upon its organisers.

Aberavon, East Talbot, and District M.C.C.

This club, which has recently been formed, held its initial competition in the form of a speed-judging contest over a sealed course on the Cowbridge road. Out of a field of twenty-two A. J. James (3½ h.p. Humber and sidecar) proved the winner. The secretary, Mr. J. H. Locke, 51, High Street, Aberavon, East Talbot, will be glad to hear from any motor cyclists in the district who may wish to join the club.

Dublin and District M.C.

The reliability trial from Dublin to Glengarriff and back (442 miles) proved a very interesting competition, and, considering that part of the route covered was in extremely bad condition, the result was satisfactory, eleven of the seventeen actual starters completing the course. Of the six men who dropped out, two had broken timing pinions, two had bad punctures, one had magneto trouble, and another, colliding with a wandering sheep, fell, and was so cut about the face that he sought the nearest railway station and came home direct. Subsequently the returns from the open and secret controls resulted in the Club Cup, with accompanying gold medal, being awarded to T. J. Dunphy, who drove a P. and M. H. Greaves (2½ h.p. Enfield) and R. Walshe (3½ h.p. Rex) were awarded gold medals, while silver medals went to T. Woods (3½ h.p. Premier) and L. J. Kettle (3½ h.p. Triumph). The committee decided to award special certificates to all those who covered the full distance without gaining a prize, and these were the following: P. J. Brady (3½ h.p. Rudge), F. J. Walker (3½ h.p. Rudge), J. H. Taylor (3½ h.p. Rudge), J. Healy (3½ h.p. Rudge), O. S. Baker (3½ h.p. Triumph), and T. D. Rollins (3½ h.p. Rover).

Ayr and District M.C.

The fourth annual reliability trial took place on Wednesday, the 16th inst., in ideal weather, the route being from Ayr *via* Dumfries, Carlisle, Penrith, over Shap summit to High Borrow Bridge and back, a total distance of 251 miles, to be covered at 20 m.p.h.

The following out of seventeen entrants qualified for gold medals, being up to time at all the controls: Miss May Senior (2½ h.p. Douglas), D. Armstrong (3 h.p. Triumph), H. Andrew (3½ h.p. Triumph), J. Brown (3½ h.p. Excelsior), George Cocker (3½ h.p. Triumph), Q. Clark (3½ h.p. Rex), F. K. Dickson (3½ h.p. B.S.A.), J. Gilchrist (3½ h.p. Triumph), J. Hutchison (3½ h.p. Singer), W. Munro (2½ h.p. Douglas), J. Meredith (5 twin Indian), D. McGill (3½ h.p. Adler), T. L. Rankine (3½ h.p. T.T. Singer), and J. Robertson (3½ h.p. Triumph).

This being the final competition of the season, the marks for the various events have now been allocated, with the result that the President's silver cup goes to Mr. George Cocker (3½ h.p. Triumph) for the highest aggregate of 576.5 out of a possible 600.

Some members of the newly-formed Weybridge and District M.C.C. who took part in the opening run on the 13th inst., starting from the Ship Hotel. It promises to be a very successful club.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All queries should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately for ease of reference. Letters containing legal queries should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Leicester to the Lakes.

? What is the best route to the Lake District from Leicester, so as to steer clear of Manchester? My machine is a 4 h.p. Jap-Campion. We are thinking of making Bowness our centre.—R.G.W.

Your best route would be as follows: Leicester, Melton Mowbray, Grantham, Newark, Retford, Doncaster, Ferrybridge, Aberford, Bramham, two miles south of Wetherby turn left and go through Harewood, Otley, Ilkley, Skipton, Settle, proceeding by Ingleton, Kirkby Lonsdale, to Bowness.

Valve Grinding.

? In view of what is said in "Motor Cycles and How to Manage Them" with regard to the damage done to valve seatings by grinding in the valves, would you advise fitting new valves in the place of those that require grinding owing to pitting? Are not the seats injured at all in cases where the valves are pitted?—R.G.C.

No. The valve suffers more than the seating. A little grinding in will do the seating no harm, but, as has been stated in "Motor Cycles and How to Manage Them," it is better to grind the valve first of all with a dummy seating, and then finish it off on the proper seating. To fit new valves in every case would be rather an expensive item, but the makers will usually true them up on a grinder when they are almost equal to new.

Varying Gear with Belt.

? I have a $3\frac{1}{2}$ h.p. Midget Tricar without pedals, geared about $5\frac{1}{2}$ to 1 when the belt is on the bottom of the engine pulley, but I find I am unable to climb all the stiff hills here (Berkshire), and not being able to go to the expense of a two-speed gear, I shall be glad to know whether the fitting of a size larger belt rim pulley to the wheel would bring the gear to $6\frac{1}{2}$ or $7\frac{1}{2}$ to 1. If this were done, would this gear be too low and overheat the engine, and would it assist me in climbing hills? Mine is an old-fashioned F.N. carburetter. Would the substitution of the latest B. and B. be any advantage for hill-climbing?—J.T.

We should advise you to have two separate belts, one giving $4\frac{1}{2}$ or $4\frac{3}{4}$ to 1 gear, and the other to use with the re-adjusted pulley, giving you $5\frac{3}{4}$ or 6 to 1 gear. Your machine, however, should be able

to climb hills with the gear you mention with perfect ease, so long as it is not used for going fast on the level with the same gear, as it would then undoubtedly overheat. The alteration you mention would further result in the engine heating up to a very bad degree. A 1911 Brown and Barlow carburetter would be a distinct advantage.

Starting a Sidecar.

? (1.) What are the correct sizes for low and high tension insulated wires for a $3\frac{1}{2}$ h.p. motor cycle? Would the same sizes be the best for a 6 h.p. twin? This useful little point seems to be omitted from "Hints and Tips." (2.) I am going in for a sidecar combination. Please advise as to whether I should purchase a 6 h.p. twin with two speeds or $3\frac{1}{2}$ h.p. with, say, Armstrong three-speed? Is the $3\frac{1}{2}$ h.p. really sufficient for the hills on main roads? (3.) How is a

sidecar combination usually started? I am told that handle starting is generally impossible with the sidecar fixed on the left. Is it a difficult matter to push off on the low gear as with the solo cycle? Or can the back wheel be raised on the stand, the engine started with pedals, put on "free," and stand raised, and machine started by slipping in the low gear?—C.C.V.R.

(1.) The usual type of motor cycle size high and low tension wire is suitable for all makes, either for a 6 h.p. or a $3\frac{1}{2}$ h.p. (2.) We should advise a 6 h.p. twin for preference. $3\frac{1}{2}$ h.p. is enough if you can obtain a lowest ratio of about 10 to 1. (3.) By putting in the low gear and pushing off. One soon gets accustomed to mounting on the wrong side of the machine. Of course, you can start by jacking up first of all, as suggested. Some engines can be started by hand with the driving wheel on the ground.

Harry Martin, who, at Parkhead, Glasgow, on the 12th inst., riding a $2\frac{1}{2}$ h.p. Martin-Jap, lowered three motor cycle records—namely, the three miles standing start, five miles standing start, and the mile standing start. Martin's times respectively were: 3 min. 24 $\frac{1}{2}$ sec., 5 min. 30 $\frac{1}{2}$ sec. (world's record for $2\frac{1}{2}$ h.p.), and 1 min. 15 $\frac{1}{2}$ sec.

Obtaining Damages for Accident.

C. I would like your legal adviser's opinion as regards an accident. Riding along a main road I overtook a pleasure party in a brake; there were cyclists riding at each side of the brake, and as I was about to pass them the brake swerved and caused the cyclist at the right side to cross in front of me. To save the cyclist I ran into the hedge, breaking the fork and front spindle. Can I recover damages?—M.O.C.

Our legal adviser states: If your correspondent can prove to the satisfaction of the court that he was riding cautiously, and gave sufficient warning of his approach, he should succeed in recovering the amount he claims, but he had better not commence an action unless he has a good witness to support him. The action would be in the county court where the defendant lives.

Tricar Queries.

C. I have a 9-11 h.p. Riley tricar, water-cooled, V-shaped engine, and would like to know as follows: (1.) What sort of oil for engine and how often to oil or charge? (2.) What sort of oil or grease for gear box? (3.) What sort of dressing for clutch? How and when to apply same? (4.) Petrol sometimes drips on clutch from carburetter. Does this matter? (5.) Distance from valve stems to tappets is about equal to thickness of thumb nail. Is that sufficient? (6.) Can you advise the best method to make the engine as silent as possible? Could I wrap silencer in asbestos or something?—R.I.P.

(1.) The best sort of oil for the engine in question is a good water-cooled oil such as the leading lubricant companies can supply you with the greatest ease. It would be best to allow the engine half a charge of oil about every five miles. (2.) For the gear box, a good, plain yellow grease, fairly thick, mixed with a little quantity of the oil used for the engine, and put into the gear box so that one of

the shafts is practically running in it, would be the most suitable arrangement. (3.) Collan oil is excellent for a leather covered clutch which is at all fierce, and should be applied the moment any "fierceness" is felt. (4.) Petrol ought not, under any circumstances, to drip on to the clutch, and it would be well to arrange some fitment which would obviate this, as it is most injurious to the leather. (5.) The distance mentioned between valve stem and tappet is approximately correct. You want just enough clearance to prevent the valve touching the tappet when it stretches due to heat, and not sufficient to retard the opening. (6.) The engine of this tricar ought to be fairly silent, but if it is not so there is not very much you can do beyond fitting another type of silencer. We should not advise you, under any circumstances, to wrap the silencer in asbestos, as it is absolutely necessary that the silencer should get rid of as much of its internal heat, as possible, and asbestos would seriously impede this.

Hill-climbing.

C. During a recent ride I had occasion to ascend Westerham Hill on my free engine Triumph geared $4\frac{1}{2}$ to 1, and strange to say I failed early on the hill. However, I made a second attempt, and succeeded in getting within fifty yards of the top, when I failed again. Being only a beginner, I shall be glad if you will advise me the best way to approach hills such as Westerham, whether "all out" or only medium throttle, etc. I am sure my machine is capable of climbing such a hill as it is in very good tune. My weight is 12 stones, and speedometer registers 700 miles only. The engine was fairly hot as I had done over twenty miles before I came to the hill.—CLITCH.

Apparently all you need is a little practice. First of all try gearing a little lower, say $4\frac{3}{4}$ to 1. Approach a hill on half throttle and then open out as soon as the steep part is in sight. This

should carry you safely to the top. At any sign of lagging slightly close the air. If then you find the engine inclined to knock, slightly retard the spark.

A New Oil.

? A traveller called upon us, offering us a brand of oil eminently suitable for air-cooled engines. He absolutely guaranteed that this oil would not carbonise under any conditions. Have you heard of such an oil, and what is the best way of testing the guarantee?—DEWDROP.

All motor cycle oils are sold as being suitable for air-cooled engines. What you had better do is to get a sample and submit it to the Birmingham University Laboratory for analysis. You will then be told if the maker's claim is justified.

READER'S REPLY.

In a recent issue "E.J.D." makes some enquiries about a Douglas. I am using a 1911 two-speed machine of this make for solo and occasional sidecar work. If he can supply the machine with petrol and oil I don't see why he should not keep it running anywhere in England till the tyres wear out without being troubled by engine overheating. As for oil on the belt mine gets a lot, I think from the chain which is automatically lubricated. It does not seem to have any bad effect on the rubber, strange as this may seem. Mine has run over 2,000 miles in about three months, and is the healthiest looking rubber belt for its age I have ever seen. It is a $\frac{3}{4}$ in. Lyso.—J. C. BENNETT MITCHELL.

EXPERIENCES WANTED.

"W.R." (Ilford). 1911 Scott with and without sidecar.

"E.C.W." (South Devon). Centipede belt.

"P.A.L." (Cheriton). 7 h.p. Indian and four-cylinder F.N. with sidecar for use in the Punjab.

C.H.A. (Buckhurst Hill). 1911 5 h.p. Indian.

AUTO CYCLE UNION SIX DAYS' TRIALS.

Competitors' machines arranged in order in the Clarendon Hotel yard prior to the start on the first day.

Additional Premises.

Nye and Co., motor agents, have opened additional premises at 138, Gray's Inn Road, E.C.

Hill-climbing.

At the Belfast and District M.C.C. hill-climb, held recently, out of eighteen entrants, a Kerry-Abingdon machine ridden by a novice made fastest time.

Martin has a Field Day.

Harry Martin won the five miles open handicap, the three miles open handicap, and the five miles open scratch race at the Cambridge Mammoth Sports on the 8th inst. He rode a Martin-Jap machine, and used a Dunlop belt. He also used a Dunlop belt on the 12th inst. when he put up new figures at Celtic Park, Glasgow, referred to elsewhere in this issue.

Changes of Address.

Owing to the large demand for Clincher tyres, it has been found necessary to obtain much larger warehouse premises. On and after the present date, all goods and repairs should be sent to the new address, Mercer Street, Long Acre, W.C. The tyre sales offices still remain at Bedford Chambers, Covent Garden, W.C.

A. T. Stanton advises us that his address is changed from Colvestone Crescent to "Kingsbury," Harlesden Road, Willesden Green, N.W. Mr. Stanton recently sustained rather a serious accident through a burst front tyre, but is now almost better again.

A motor cyclist press photographer who has ridden motor cycles for eleven years, and owned over twenty different machines. In a letter to the makers of his machine, he states that his business takes him over all sorts and conditions of roads, and his Rover takes him up the b'ggest hills with ease.

Two New Accessories.

Several ingenious accessories have lately been placed on the market by Messrs. Packer and Prentis, Roden Street, Ilford, among which we may mention the Mixa fan, which is fitted in the inlet pipe. When in position, it is spun round by the suction of the piston on the induction stroke, and in turning thoroughly mixes the gas and air. Great improvement in

running is claimed by the makers for this device. The other accessory which we illustrate is Messrs. Packer and Prentis's belt fastener, which, it will be seen, has an extra screw hinged on it. The fact that each side is attached at two points should avoid any possibility of the fastener coming adrift.

Route Cards.

Jones and Co., motor engineers, Lichfield, present all motor cyclists who call at their garage with a neat little folding pocket motor map and guide, which gives all the important routes passing through Lichfield and the mileage along the roads to important towns. This is an enterprising feature which will doubtless recommend itself.

An Ingenious Two-speed Gear.

The engine crankshaft A carries loosely mounted upon it a belt pulley B, which can be clutched to it the operating lever C. The half-speed shaft D, which actuates the valves, is made sufficiently strong to take the drive, and it carries a chain

sprocket E, which gears by a chain on to a sprocket F fixed to the belt pulley B. When the operating lever C is moved in the opposite direction the chain sprocket E is clutched to the half-speed shaft D, and the other clutch, securing the belt

pulley B to the engine crankshaft, is disengaged. The power, therefore, goes through the half-speed shaft, and returns to the belt pulley through the chain at a reduced speed. This invention provides a two-speed gear, with the ability to start on the clutch on either gear, with the addition merely of a pair of chain wheels and a chain, the half speed gearing for driving the camshaft being, of course, an essential in any case, whilst for the present invention it is merely made slightly stronger than usual.—G. D. Leechman, No. 12,827, 1910.

A Spring Seat Pillar.

The two tubular portions A and B are connected by a circular spring portion C. Helical springs may be used as at D to accommodate riders of different weights. There are thus no pivots or bearings to wear out and make a noise.—R. Bayliss, No. 24,345, 1910.

**The Triumph Luggage Carrier.**

In order that a low saddle position may be obtained, the luggage carrier A does not project as far forward as usual, but stops short at the vertical rods B, and

is secured to the stays C by means of the bar D. The toolbags EF are arranged beneath the carrier.—Triumph Cycle Co., Ltd., and C. W. Hathaway, No. 17,947, 1910.

Lost and Found.

We receive many letters regarding accessories, etc., both "Lost and Found," which we are unable to find space for. As these particular matters are of interest to two persons only, viz., the finder and the loser, we have decided to keep a list of such articles, and all that are notified to us will be inserted in this list. Should we receive a letter from the finder which corresponds to the article lost, the two persons will be put into communication, but we cannot enter into correspondence on the matter.

GEAR

THE REWARD OF MERIT.

In consequence of the phenomenal success of the Gradua Gear, no less than 10 different motor cycle clubs have found it necessary to place restrictions upon its use in their competitions. The monotonous run of Gradua successes discouraged other riders from entering.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 14 words or less 1/6, and 1d. per word after. Each paragraph is charged separately. Name and address must be counted. In the case of Trade Advertisements a series of thirteen insertions is charged as twelve.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," Coventry, or London (20, Tudor Street, E.C.), by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should state distinctly under what heading and in what issue the announcement appeared.

CLASSIFICATION BY LOCALITY.

For the convenience of purchasers of second-hand motor cycles, the advertisements are classified into districts, as many readers like to know what machines are for sale in their immediate neighbourhood before going further afield.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, 2d. will be charged for registration, and three stamped and addressed envelopes must be sent for forwarding replies. Only the number will appear in the advertisement. Replies should be addressed, "No. 000, c/o 'The Motor Cycle,' Coventry"; or if "London" is added to the address, then to the number given, c/o "The Motor Cycle," 20, Tudor Street, E.C.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but if not we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions exceeding £10 in value, a deposit fee of 2s. 6d. is charged, when under £10 the fee is 1s. All deposit matters are dealt with at Coventry, and cheques and money orders should be made payable to Hiffe and Sons Limited.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

LUBRICATION

LUBRICATION is a matter of utmost importance to the motor cyclist, and an item which is apt to be too lightly considered. You cannot give too much attention to this, or exercise too much care in the selection of a suitable oil.

CHEMICO MOTOR BIKE OIL

has had our careful attention coupled with our wide knowledge of oil, exercised in its production, which with every confidence we recommend **CHEMICO MOTOR BIKE OIL** is exceptionally high in flashpoint, will not carbonise the valves, or soot the plug, but will circulate everywhere necessary and keep the engine perfectly cool.

WE URGE every motor cyclist to test **CHEMICO MOTOR BIKE OIL**, and give attention to the running of the engine during test.

Note how sweetly it runs and how clean the valves keep.

Complete £5 : 5 : 0 Complete

FARRAR'S HALIFAX SIDECARS.

Absolutely the finest value on the market.

LESS POWER.

It is admitted by experts that, owing to the unique design, far less power is required to propel Farrar's Sidecars than any other style on the market. NOTE our front arm which grips the sidecar CENTRE. Nothing lopsided about this attachment.

All our Sidecars are now fitted with Farrar's quick detachable joints and cranked back axles, refinements found on very few other makes.

Next Year's Thousand Miles Trial.

EXCELLENT as was the organisation of the 1911 Six Days' Trial in most respects, we heard a certain amount of criticism and grumbling at its conclusion. We take it that the sincere purpose of these trials is to set a very exacting standard of performance. If this is the real object, no efforts must be spared to eliminate the element of luck as far as possible; and from a motor cyclist's point of view "luck" may often be translated "tyres." At present the tyre element is absolutely ignored, yet from the private owner's standpoint the tyres are probably the most uncertain item of every machine's equipment. To "observe" tyres will not greatly complicate matters. Each man would be allowed two covers and three unpunctured tubes at the start, all of them officially marked. On coming in at night, any marks lost up to, say, 15 would be cancelled if he were able to show a repaired puncture. At the conclusion of the trials there would be a report as to the number of stops and replacements sustained with each make of tyre, and of their finishing condition.

Secondly, the regulations are very weak regarding belts and chains. Competitors and others would laugh if the owner of a chain-driven machine started with three sets of chains, but to fit a new belt every other morning of a trial is not unknown.

Then we come to the hills. The general level of the performances was excellent, and few of the variable-gear machines were ever fully extended. It will be almost impossible to find steeper hills in England, or to cram more than two bad hills into each day's ride. In number and severity the hill tests were satisfactory, though they could have been

improved if a paid official of the A.C.U. had ridden over the course three months ago. Similar tests will, of course, be included in every future trial. As a few machines fitted with variable gears failed to negotiate some of the ascents, it cannot possibly be argued that a variable gear is an absolutely certain means of climbing an exceptionally steep hill. By the same rule, the contrary is not proved because some fixed geared machines were successful. The personal element is too strong, particularly in hill-climbing, for failure or success to be decided alone by the mechanism of the machine. It is well known that a good many of the competitors and a large proportion of the A.C.U. officials were unacquainted with the severity of the course, despite the articles that we have published concerning it and the strong warning we issued. Had every competitor gone over the difficult parts with his machine previous to the trial, it is possible the gear ratios might have been considerably lowered, and the failures on hills would have been turned into successes. Hill-climbing—*ceteris paribus*—is merely a question of gearing, and, provided the gear is low enough, almost any machine will climb the hills over which the competitors journeyed.

The accommodation must be improved for another year, or a new body will spring into being and organise an opposition trial. Competitors will not submit twice to the discomforts endured this year.

The 20 m.p.h. average should be made a fact and not a farce. The number of gold medals would then be halved or quartered, for there were very few who did not save their gold medals at least once by a prolonged scorch after some comparatively lengthy stoppage; and this defeats the purpose of the trial, except, perhaps, so far as tyres are concerned.

No. 7 A COMPETITOR'S IMPRESSIONS OF THE SIX DAYS TRIAL

SEVERAL years ago I competed in an A.C.U. Six Days' Trial, and was allotted No. 13, now extinct! Needless to say, after a host of minor troubles I stripped my timing gear. This year I was given No. 7, which is supposed to be lucky; at any rate I found it so, and if I did not get through without that spice of trouble which adds a savour to all riding, at any rate I enjoyed a very passable picnic. My mount was a $3\frac{1}{2}$ h.p. Rudge, which had already won a gold medal in the Scottish Trials, and covered about 2,000 additional miles in ordinary touring work, and it was specially equipped for the formidable hills with a N.S.U. two-speed gear; I scrapped the handle-bar control, which proved unsatisfactory in Scotland, and substituted an ordinary "coffee-grinding control." I let myself be unnerved by a lot of old wives' fables about the severity of the hills, and selected 5 and $7\frac{1}{4}$ to 1 for my gear ratios, with the result that the engine was hopelessly undergeared all through. Sutton Bank turned out to be our worst climb, and, as everybody knows, a $6\frac{1}{2}$ gear is quite low enough for it. One other detail of the

machine deserves mention. We were told we must make clean ascents of nine out of the ten "observed" hills to secure a gold medal, and I dislike a very sensitive carburetter in climbing unknown hills with bad surfaces and hairpin bends.

B. and B. Carburetter Made Automatic.

As some riders know, it is possible so to adjust a B. and B. carburetter that it is practically automatic. I set mine so that the air lever was thrown wide open at starting, and that once going a fairly accurate mixture can be obtained at all throttle positions without again touching the air. Consequently I never moved my air lever throughout the trial except when starting, and if I wanted more power on a hill I had only to jab the throttle wider. This is very pleasant when the machine is buck-jumping all over the road, and it is anxious work to free a hand for a gear change. The defects of the adjustment are heavy petrol consumption (in my case about eighty miles to the gallon), and a certain loss of flexibility. Furthermore, as the judges demanded sure rather

A.C.U. SIX DAYS' RELIABILITY TRIAL IN YORKSHIRE.

General view at the top of Blue Bank, one of the observed test hills. The riders are P. Weatherill (Zenith-Gradua) and F. Philipp (Scott).

CLIMBING WASS BANK IN THE 1,000 MILES TRIAL.

A. R. Abbott (3½ h.p. Bradbury), P. W. Moffatt (2½ h.p. Douglas), and B. H. Davies (3½ h.p. Rudge).

than swift ascents, I made it a rule to change gear very early if a rough hill promised to become too steep for the high gear.

Now to our muttuns. Receiving the machine by train from the works on the Friday before the trial, I trained up to York, and rode out to Sutton Bank, in lieu of surveying the entire course, as many of the trade riders thought advisable. To my horror, the engine would not look at the famous "bank"—the Trough made her conk out from either a hot or cool start.

Valve Adjustment Necessary.

I remedied several small adjustments without effecting a very marked improvement, and only the inlet valve tappet seemed in need of further attention. This I could not shift with the tools at my command, and I went off to Harrogate in some anxiety. However, the valve adjustment put the coping stone on her tune, and when we started on the Monday I knew she was in champion form. Monday's run was exceedingly dull and uninteresting until we reached Byland Abbey. Hereabouts three or four water splashes set a rubber belt slipping, and then several of us went off the route, and so got to Wass Bank a trifle late. Lingered only to tighten the belt. I rocketed up over the bricks and gullies on top gear, being very thankful that I had the road to myself with such bumps to traverse, until at last I fell into a deep trough across the road, whereupon I promptly changed down, and lifted the valve at the succeeding bumps. It was well I did so, for several wheel rims were badly kinked on this climb. The gradient was contemptible.

On our way into Whitby we took special interest in two hills now to be descended, but to be ascended on the Wednesday. The first was unofficial, a short, steep hairpin; the second was Blue Bank, real gradient towards the top. The trip from Whitby to Saltburn proved exceptionally exciting, being a crazy succession of blind corners, and short, single figure gradients with two or three hairpin bends on each.

On these the value of the variable gears was demon-

strated, for almost all the single-gear machines failed three or four times apiece. Let me not boast, for I twice had a petrol lock along this stretch, and should never have scraped up a third hill if two Bats, two Triumphs, and two Douglases had not all mulled a corner just ahead of me, and so warned me that the road had gone mad. Sutton proved a simple matter now that my inlet valve was opening fully, but several other competitors came to grief just for want of such a test climb as I had made on the previous Saturday. For instance, by some strange mischance a No. 28 jet had got into the carburetter of poor Robbins's Humber, instead of the No. 34 or 35 he usually employs. Before the day's run ended, we were all growing to loathe the flat roads on the plain of York, along which we were daily given at least two exercise canters, just to pile up the mileage towards the sentimental 1,000 deemed essential for a six days' trial. On Monday night various Yorkshiremen came in, and drew lurid pictures of the freak hills awaiting us, all of which proved to be fabulous. I had my throttle two-thirds open on the Trough of Sutton on Monday, and I never again needed so much gas all the week. On Tuesday we started with the usual preliminary breather along dull, flat roads, which we should have appreciated more if we had known what a nightmare the Reeth to Brough section was to be.

A Regular Nightmare.

The hill-climb at Arkengarthdale was by no means all that fell flat on this stretch. I saw four men unsaddled within a single furlong, while many others were creeping along on their low gears, cutting out every few yards. The "observed" hill was a vee pitch of insignificant gradient, claiming a villainous stony surface and a sharp S bend as its only terrors, I crept cautiously round on low gear. After this, for several miles the road resembled a river-bed, and my Scottish practice came in handy. Those of us who are used to mountain roads easily exceeded the official speed limit; others, who had never encountered similar surfaces before, maintained that it was impossible to average 20 m.p.h. over such going. Luckily for them, the section proved to be three

Competitors scrambling to sign the checking sheets at Leyburn.

'No. 7': A Competitor's Impressions of the Six Days' Trial.—miles longer than the route card stated—a common failing of these very inaccurate cards—and all lost marks were subsequently cancelled. Luncheon, as usual, was very uncomfortable. The afternoon roads were good, but deep in a blinding white dust, which served one good purpose, in that the clouds churned up by the leaders gave us early notice of any abrupt corner.

Eboracian Exaggeration.

Searth Nick—the afternoon hill—was a climb about which the local riders had given their fancy free play. It was described as being so steep that we must be careful to dodge the stones rolling down it. Its surface was not a patch on Little Grinard, and the gradient allowed me to go up on top gear until a slower man, who was deaf, baulked me. After this we trickled comfortably home, beginning to wonder whether we need believe a word the locals had said about the severity of their hills. Wednesday was a chequer day for me, at any rate. We had a ridiculously easy run in the morning (Garrowby Hill being a half-throttle top-gear sort of climb), and a comfortable lunch at Scarborough.

I had felt distinctly uneasy about Blue Bank, which had impressed me when I coasted down on it on Monday, and, as my belt had broken leaving Whitby, I had no time to cool the engine; indeed, few people had, for at least twenty men had tyre stops between

Scarborough and Whitby, their covers being gashed through by sharp stones. Gray and Burney did smart work on this section, having several punctures apiece on a short check; indeed, at this stage it was unusual to see Gray except with his back wheel out, fitting a new cover. Blue Bank proved illusive, for the engine took it with much more in reserve than Sutton Bank; later on, the moorland hairpin nearly gave me a toss—I rushed it much too fast, skidded, and found myself in the ditch still on top gear with the engine loudly conking; just as I coffee-ground the low gear in, and the machine scrambled out of the ditch, I saw a callous photographer with his lens not two yards away. Nice easy run home, which made my engine inconceivably hot—the right footrest felt almost incandescent.

A Seized Engine and its Release.

I stopped once or twice to cool down, and just outside Harrogate the engine seized. There was no time to investigate or to use paraffin; Gordon Fletcher helped me to free it temporarily by pulling the belt backwards, and then I had to check in. I engaged the low gear, and pushed it by the longest route into garage, but it seized up again at the door, and I went to bed convinced I should not have the chance to test the local fairy tales about the remaining hills. Next morning I armed myself with a couple of quarts of paraffin, and you may be sure I was inside the garage the instant Nisbet megaphoned his "Open, sesame!"

(2½ h.p. Douglas) at the summit of Searth Nick.

'No. 7': A Competitor's Impressions of the Six Days' Trial.

First of all, I whipped off the timing gear cover—all right there; then in went the low gear, plus a lot of paraffin, and Victor Hart helped me to push it round the yard until the engine was at least movable. A little more paraffin, and five minutes before the official starting time the engine was heavily, creakily, movable. Now at last it was possible to get the cylinder off and pour paraffin direct into the crank case, so as to loosen the big end or whatever bearing was the culprit. Joy! the engine was at last quite free. Half a can of Vacuum was poured into the crank case, the cylinder slipped on again, and we were off with a sporting chance of *not* being late at the first check. Four miles off the road and four miles back again did not enhance the sporting chance, and Hugh Gibson would have revelled in the fashion of my entry

"No. 7" is obliged to run alongside on Keighley Gate owing to his inlet tappet adjustment shaking loose.

Showing
the
tortuous
nature of the
SIX DAYS
Trials Course.

C. T. Newsome (3½ h.p. three-speed Rover) climbing Blue Bank.

into Boroughbridge—there was a trail of blue smoke behind me right up to lunch. The probable cause of this seizure was a speck of grit in the automatic valve of the oil pump; several other competitors suffered similar frights, but without the added anxiety of having to leave their engines to cool down without paraffin.

The morning hill, Greenhow, was a snorter as viewed from the street at its foot, and the sight of a redoubtable non-competing Scott descending for its third attempt did not cheer me up perceptibly, for I was unaware that its jet was full of jelly. I stayed to cool as long as I dared, ran out the waste oil, injected six pumpfuls of fresh oil—and roared up the hill on half throttle. This looked as if the big end was free enough by now, and the machine ran on excellently, making light of Kidstones, the second hill for the

day. Some of the riders professed great respect for Kidstones. My engine took it much more easily than Sutton, possibly because I climbed all the hills except Kidstones with my inlet valve spring in three or four pieces. I was using an experimental type of spring, no sample of which remained unbroken for more than ten miles. I put a new one in for Kidstones, because I had heard such marrow-freezing stories about it; but the engine did not seem to mind very much whether the inlet spring was intact or in four pieces.

On Friday I had my second worrying patch in the trial. Outside the Otley check, by some strange mischance thirty or forty of us were half an hour ahead of time. Quoth Bradbury Abbott to me, "I think I shall take this chance to fit a new exhaust valve." Quoth I to Abbott. "I shall let well alone." Not being as good as my word, I be-

F. Smith (5-6 Clyno and sidecar) on Arkengarthdale Hill.

Competitors on Saltburn Bank, S. Crawley (3½ h.p. Triumph) leading.

guiled the wait by adjusting my inlet tappet closer up to the rocker. Outside Ilkley we struck Keighley Gate—probably the only hill in the trial which could compare at all with Sutton.

On the first stiff patch, my belt broke. I mended it, went up the bank, charged down a 1 in 1 grass slope on the low gear, and presently with a sad heart heard the flat, sharp bark of my exhaust soften down into a low woolly mumble. It was no place in which to restart a 2 cwt. machine, so I hopped off and ran till I could run no more; when the inevitable happened, and my wind was exhausted, I took out a file to shorten an imaginary stretched exhaust valve. Horror! The exhaust tappet was nice and easy. "Cracked valve seating!" I moaned to a sympathetic spectator, who gave me a shove off.

'No. 7': A Competitor's Impressions of the Six Days' Trial.—More penny numbers followed, my thanks for the last push being due to W. G. McMinnies: Reaching the top, the machine would not travel on the level or downhill, and I wearily prepared to see whether fitting a spare valve would enable me to crawl ignobly into Harrogate as "retired." As I gingerly put out my hand to withdraw the inlet tappet, I spotted with a thrill that the engine was almost *stone cold*. Reader, did you ever conk out on a hill with a stone cold engine? It shows the pitfalls of a mental diagnosis; if I had only *looked* carefully at the engine down the hill, instead of *thinking* about it, I must have noticed that the inlet tappet lock-nut had shaken loose, and that the valve was barely opening $\frac{1}{32}$ in., and then I might have romped up. Next came the official hill, Heaton Woods—a paltry little S bend between stone walls, alleged to be 1 in 4, about which I should say there is a doubt with a capital D. I took it on the run, and almost immediately received a reminder from the goddess Fortune that there is something in luck. I was using a belt fastener which I had never known to snap, and apparently my trials batch were over-tempered, for I broke four in as many miles.

Mistakes in Time and Distance.

Next the spectacled rider's worst enemy assailed me—drizzling rain with dusty roads. My glasses were promptly covered with a thin opaque paste, and I had to get off every mile to clean them. Finally, getting within sight of Colne, I resolved to use up the time margin in overhauling my cut belts, and when I entered the check found the official mileage too short and the checker's watch wrong, so that I had a very narrow escape of losing marks. Several men lost a few marks at this control, and they have my sympathy, for I am convinced that there was a distinct error both in distance and in time. The lanes round Settle resemble Scotland in their grades and corners, but the surfaces are usually good; they provide very sporting riding. We had plenty of hills in the afternoon. Skyreholme Moor fetched nearly thirty men out of the saddle, thanks to a steep hairpin coming in most unexpected fashion. I thought the crowd of stalled men were in doubt about the route, but my low gear was equal to both corner and climb at a fraction of a second's notice. Skellgill later on dismounted almost as many as Skyreholme; and, oddly enough, Brownstay Ridge, which was worse than either, hardly puzzled any of us; so much difference does a cool and a tightened belt make at times. I made an ass of myself on Brownstay Ridge. My valve lifter was temporarily demoralised at the foot, and I opened my compression tap to facilitate belt shortening. Then I actually started up the hill with the tap open, and was greatly puzzled by the weird noise. I thought my sparking plug was loose, or that my cylinder had cracked, until I was up the first steep bit on top gear. Then the tap came back into memory, and I got a priceless burn on my thumb in shutting it. Immediately after, thanks to dust on my spectacles, I failed to dodge a fearful hole in the road, and on reaching the top was overjoyed to find my back wheel still intact.

Here I took a breather and a smoke—it was comforting to know that I had made clean ascents of all

ten official hills, and had only to finish with a clean time-sheet to secure the coveted "gold." The usual canter over the plain ended a sporting and exciting day. Saturday was unfortunately a *dies non*—a mere 120 miles of flat road, with nothing to take one's mind off the chance of a puncture just outside a check; and a last minute failure. Surely the sixth day ought to be a scorcher, to weed out the weaklings, several of which just managed to finish and qualify for gold medals owing to the simplicity of the final run.

Reviewing the trial as a whole, I should say it failed to be really difficult, principally owing to the weather. True it included a record amount of hill-climbing, but there was no hill of which a first-class $3\frac{1}{2}$ h.p. geared $6\frac{1}{2}$ to 1 ought not to make a clean ascent at the first shot; still less was there any hill likely to puzzle a variably-gear $3\frac{1}{2}$ h.p. in what I call "threequarter tune." Now that variable gears are becoming standard, hills are automatically deposed from pride of place in a trial; they will possibly resume their terrors for a year or so when a restart on the worst patch is demanded of us. The real difficulty of a trial depends on the possibility of making up time after a stoppage. Thanks to the fine weather, it was possible to make up time throughout the whole of the route. The Tan Hill stretch was the sole patch where slow travelling was imperative; hence the trial was not extraordinarily difficult. Many men had a lot of trouble, and made up several hours which they would have lost had the roads been greasy. A week of showers might halve the number of gold medals awarded over this course, when allowance is made for the resultant belt troubles and the perils of "blinding." The Scottish Trials struck me as far more exacting; their hill-climbing tests were inferior in both frequency and calibre, but there were so many sections along which lost time could only be recovered at grave risk. In respect of organisation the trial was, generally speaking, excellent, and especially must the splendid route-marking be noticed. In an A.C.U. trial you can rely on finding an arrow wherever an arrow is necessary.

Room for Improvement.

Two serious causes for complaints remain for improvement. The one is the great inaccuracy of the distances on the route cards, which is most unfair to the men. They are threatened with the loss of a gold medal if they arrive four minutes late at a check or if they are caught waiting outside it; yet the route card bristles with errors, amounting in some cases to six miles on a single check, and in addition the checker's watch may be several minutes wrong. When a ten-guinea entry fee is charged, it should be possible to send a reliable paid official over the route beforehand with a calibrated odometer. This would relieve the men from anxiety, and the officials from wearisome protests, some frivolous, others well founded. Secondly, the accommodation was very bad, especially at some of the luncheon stops. The food was indifferent, the attendance was non-existent, and there was no shelter for the machines. If the weather had been wet, the friction might have materialised into some formidable shape. As it happened, the organisers may be as grateful as the riders for the steady sunshine, which, though alleged to have influenced industrial disturbances, did not apparently shine strongly enough to rouse the ire of hardworking motor cyclists.

BROOKS

That name on your Saddle means comfort—pleasure—health. It means that vibration—your deadliest enemy—will *never* trouble you—and why? Because, it is the *only* Saddle that can embody the BROOKS Compound-Spring, and that spring is the *only* spring which entirely absorbs vibration within itself, and, at the same time, by its perfect compensating action, ensures an absolute immunity from bounce. Such are the exclusive advantages of the BROOKS

COMPOUND - SPRING

Saddle—the saddle that is manufactured by a firm whose experience in saddle making extends over a period of thirty years, viz.,

J. B. BROOKS & CO., LTD.,
49, CRITERION WORKS, BIRMINGHAM.

Bear that fact in mind, and when you buy a Motor Cycle, no matter what the make, specify the BROOKS

SADDLE

Samples of all BROOKS Saddles and Cycle and Motor Cycle Accessories may be seen at our London Showrooms, 11, Grape St., Shaftesbury Avenue, W.C.

"I never carry Magneto Spares now!"

A tribute to the high standard of service given by

SIMMS

BRITISH MAGNETO.

Simms Magneto Co., Kilburn.

Lanesley House, Maidenhead.
28/6/11.

Dear Sirs,—Last Jan. I took delivery of a Bradbury fitted with one of your magnetos, and the only fear I had was that the valuable box of spares I had for another make would not fit. I may now say I have ridden since Jan. 1911, 6,300 miles, won London-Edinburgh—Edinburgh-London gold medal; London-Land's End-London silver; and M.C.C. 100 mile non-stop silver (highest award). I have ridden in the wet and mud and the little box you supply has always prevented misfires. I never carry magneto spares now.

I am absolutely satisfied with it and wish your firm every success.

I am, Yours faithfully,

R. C. OWEN WELLS, B.A.

Moral. Fit a Simms Magneto in conjunction with Simms Plugs and enjoy life!

Let us send further particulars.

THE SIMMS MAGNETO COMPANY, LIMITED, Welbeck Works, Kimberley Road, Kilburn, London, N.W.

Telephone—3813 Paddington.

In answering these advertisements it is desirable to mention "The Motor Cycle."

Abridged Specification of 6 h.p. Twin-cylinder N.S.U.

N.S.U. twin-cylinder engine, 796 ccm., 75 x 90 mm., M.O.I.V. gear-driven, high-tension Bosch magneto, new type carburetter, drive by tin "V" belt. This machine can be delivered with either a spring frame or a rigid frame, the latter where the motor cycle is intended for sidecar work. New pattern spring forks, divided

6 h.p. Twin-Cylinder. Best for sidecar.

mudguards, automatic spring stand, separate tanks for oil and petrol of improved design, two powerful brakes, 26in. wheels fitted with 2 1/2 in. tyres, engine clearance 5in. This motor cycle is delivered as standard with an adjustable pulley, but, if specified, can also be supplied fitted with our two-speed gear and free engine apparatus to the engine shaft at a small extra price. Weight 200 lbs.

N.S.U.

N.S.U.

A GREAT TRIO.

Abridged Specification of 3 1/2 h.p. Model de Luxe.

85 x 88 engine, double row ball bearings to engine shaft, gear driven, Bosch magneto, handle-bar control, M.O.I.V., low frame, internal expanding brake and belt rim foot brake, spring forks. Long comfortably arranged handle-bars, rear half of back mud-guard detachable, stand, carrier, tool case, etc. Can be fitted with two-speed gear and free engine pulley at extra cost.

Reliability and efficiency are the outstanding qualities of these machines—the qualities upon which hang your pleasure and profit. Any of the models illustrated will give the utmost satisfaction; of this you can be perfectly certain.

Do not be influenced by ingenious arguments, or the flash of bizarre performances. Trust to reputation, to the known facts of long standing.

In all parts of the World the N.S.U.'s have rendered splendid service, and the evidence of their superiority is overwhelming.

In hill-climbing, speed, flexibility, smooth running, ease of control and economy, they are "top hole." See the machines—they will convince you.

For performances of, and awards to, machines in the A.C.U. 6 Days' Trials fitted with N.S.U. TWO-SPEED GEARS, see last week's issue.

Abridged Specification of 3 h.p. Twin- Cylinder N.S.U.

Twin-cylinder engine, 395 ccm., 58 x 75 mm. M.O.I.V., gear driven, H.T. Bosch magneto, new pattern carburetter, drive by 7in. V belt, spring frame, new type spring forks, new type petrol and oil tanks, divided mudguards, automatic spring stand, two brakes, 26in. wheels fitted with 2in. tyres, engine clearance 6in., gear ratio 6-1. Delivered as standard with under-gear pulley of improved design.

3 1/2 h.p. Single-Cylinder Model de Luxe.

3 h.p. Twin-Cylinder.

Occasional Comments "by Ixion"

SRJ

The Reliability of Variable Gears.

What charms me most about the report of the Six Days' is the absolutely clean sheet scored by variable gears. So far as I have been able to ascertain, there was not one single solitary suspicion of trouble with any competing variable gear. So much for those mournful prophets who used to lament the folly of the variable gear enthusiast, on the score that variable gears meant complication, and that complication meant trouble.

The variable gear is likely to take its place alongside the magneto, as the most complex and withal the most reliable item of our specification. I grant you that sundry single geared machines did excellently in the trials, but, as in all go-anywhere riding, their riders had a poor time of it compared to the variables. At the foot of each of the ten official hills the single-gear man had a dirty and breathless time. He had to fish out a spanner, and perhaps a hammer as well, unlock his pulley, take off the belt, uncoil a second belt from his person, or the carrier, or the lamp, and fit it to the machine. Even thus his gear was not low enough to leave him any marked reserve of power, and he ascended the hill in a perfect fever of apprehension lest he should mull a tricky corner, or be balked by a slower man, or make some driving blunder.

Moreover, the single-gear men had other burdens to bear, in that several unobserved hills were worse than some of the official hills, and took the riders by surprise. The variably geared owners simply touched a lever; the single geared men, after an unavailing struggle, returned to the bottom, got out spanners and spare belts, and began all over again.

So it will always be. The variably geared machine is the only mount for the rider who wants to go everywhere without a lot of fiddling by the roadside. In estimating the value of certain single-gear performances it must be remembered that several of the riders had taken the precaution to survey the course in advance. I hear much interesting news about 1912 gears, but until the Show Forecast Issue——!

Carry Your Own Filter.

I wonder how soon motor cycle designers will fit their petrol filler caps with self-contained gauzes. Almost every modern car of any standing has a slip-in wire gauze filter lying snugly under its filler cap. At country garages we sometimes get a funnel with the gauze torn or missing. Why should we not all have loose gauze filters resting within our filler holes, like the Scott and Triumph? It would always be a convenience, and on club runs, where there is a scrimmage for the one and only garage funnel, it would be a real boon. Now that large filler holes are becoming standard, I regularly pour the spirit direct from can to tank. A small compact filter embodied in the petrol pipe is, of course, equally serviceable, and perhaps better, as the mesh can be finer.

Driving on Throttle or Valve Lift.

A good many riders drive one-handed, except, of course, when they are out on a sidecar record; and the other night I heard a fierce discussion between two of them as to the proper method. The one man was left-handed, and was an advocate of driving on the valve lifter over ordinarily decent roads. His points were that, like most of us, he was a left-handed steersman for preference, and the valve lift is on the left grip; that if driving on the valve lifter is severe on the valves, the modern valve is good enough to stand it, and that this method throws less strain on the engine bearings than driving on the throttle does.

The other disputant countered with a series of direct negatives. He said he was a natural right-handed steersman, that the modern valve will not stand being driven on the lifter, and that throttle driving is a good deal easier on the engine.

There are the materials for a controversy here. For myself I plead guilty to adjusting my engines to a certain normal road speed, which I dare not mention till Mr. Gibson has been mollified. Then along all decent highways I steer left-handed, and cut out with the valve lifter for temporary slows. On what may be termed sporting courses, I keep both hands on the steering-bar, and drive on the throttle and the spark as well as on the exhaust lifter. I believe the question is settled for many riders involuntarily by the shape and position of the throttle lever.

Some carburetters have a control which does not readily lend itself to this delicate and expert mode of use. One machine I know has a stumpy and ill-placed throttle lever, which is only steady in one position; and by the same token it was this machine which first betrayed me into my present rough-and-ready method of driving on the valve lifter. It is lucky I have no T.T. aspirations; it would take me months to develop into an expert engine nurse by driving exclusively on the throttle.

W. Stanhope Spencer, who, riding the 3½ h.p. Rudge illustrated, is credited with covering a flying mile in 49½ secs. = 72.58 m.p.h. The previous best timed speed for a single cylinder was 68.28 m.o.h. by H. Martin on a Martin-Jap.

Heard in the Harrogate Smokeroom

THAT Sutton Bank was easily the worst official hill, with Kidstones a bad second.

That Keighley Gate was as stiff as Sutton, or, according to those who conked out on it, a shade worse.

That the hairpin on Skyreholme was a frame-twister. That Pateley Bridge is best described as "pocketed amongst pimples."

That two men retired with connecting rod trouble, and several others freed seized big end bushes on the road.

That therefore some people must be very careless about lubrication, or alternatively, then automatic oil pumps are not all they might be.

That a certain competitor's language was frequent and free on Wednesday night; when you are paying 10s. 6d. a day for board and lodging, with the privilege of sleeping in the hotel bathroom, it is a bit rough to come in dirty, and find a lady is having a "bath in your bed," as the boots phrased it.

That some of the holes on Wass Bank and Brownstay Ridge were enough to shiver a traction engine; and the officials who sent us up without warning us to go slow must hold shares in a rim manufacturing company.

That there were hardly any big or little troubles all the way through, and if it had not been for belts and tyres many men could have got through without toolbags.

That the continuous sunshine left the belt v. chain controversy "as you were," but if it had rained much, we should have seen a lot of round parcels on the breakfast table.

That one evening you could hardly get into Mackay's garage for jostling competitors; yet the rules say "each man must do all his own repairs—and in running time."

That several heathen Chinese had a bad habit of taking their spare belts and tubes up into their bedrooms under their overalls for secret repairs.

That anybody who wants to improve his cornerwork should practise averaging thirty round Settle.

That the speedometers on the official cars were minus maximum hands, and that Hugh Gibson was in a low way in consequence.

That Billy Cooper has mistaken his vocation; he ought to have been a housemaid; he could be seen outside every check filling a little can with petrol, and digging dirt out of the corners of his jigger with a stiff paintbrush.

That he must have been wroth when the officials decided not to "observe" cleanliness; the "housemaid brigade" got badly scored off over this.

That Davies had a colossal brass bedstead knob to wind up his N.S.U. gear with.

That the crowds on the test hills beat all records, and that they were callously disappointed to see so few failures.

That two sidecars which came up north to lend a hand had their axles broken.

That the car which met one of the flying sidecar wheels coming straight down the road all by itself at 40 m.p.h., just managed to catch it bending, and dodged it.

That the Scott machines must have their silencers removed before another trial; they gave us the jumps by overtaking us so quietly.

That if any of the judges had known anything about the hills, Arkengarth, Garrowby, Scarth Nick, and Heaton Woods would never have been thought worth observing, but that Norwood Edge, Skyreholme, and Keighley Gate would have been watched.

That some of us are very glad they were not.

That young Crawley did jolly well to climb all ten hills on a single gear; and that he was very unlucky to lose his gold by a crop of punctures on a section which was wrongly measured and wrongly timed.

That it is about time tyres were taken into account, when one man uses up five covers in six days.

That the judges soon grew tired of asking men to demonstrate the accessibility of back wheels; they sat on packing cases for two hours watching one man at work, and then the whistle blew.

That the Rudge men were sitting up on their hind legs waiting to be asked to demonstrate their back wheels; but they never got a look in.

That since we watched the scales at Harrogate, we shall never again talk of "80 lb. lightweights," "120 lb. medium-weights," or "150 lb. tourist types."

That there has never been so little "conking" in a trial before. We never heard that dear old "hammer-on-anvil" noise, except when some unfortunate tried to restart after a long blind into a check.

That the A.C.U. officials are talking of secret hills next year!

That the officials also talk of forbidding waits at the foot of official hills.

That the variable gears disappointed the croakers by giving practically no trouble at all.

That some of the single-gear men grew to loathe the sight of their pulley spanners and spare belts by Thursday.

That the rules provided no penalty for "blinding" unless competitors were found within one mile of a check fifteen minutes ahead of time.

That the roads were fringed with men who were smoking and chatting outside all the checks, but that the fringe terminated abruptly just where the milestone or fingerpost said "1 mile to X—."

That these waits were principally sociable. Few men did anything except clean up, or shorten belts. Two or three years ago the waiters were working for dear life.

That it was odd how seldom a public house was handy one mile from a check.

That some riders started their watches from twelve o'clock at the start of each section—a good tip for simplifying timing.

Scene nearing a control in the Six Days' Trials. B. Alan Hill (Rudge) and H. G. Dixon (New Hudson) relate their experiences.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and should be accompanied by the writer's full name and address.

Visibility of Signs.

[5831.]-Referring to a photograph of warning sign-posts appearing in a recent issue, may I be allowed to remark that black and white in broad bands, say, ten inches or a foot, are the best. I have not seen the Wands-worth signs, but speak from experience in land surveying. A comparatively slender flag-pole in black and white is visible for great distances. But if the bands of colour be made narrow it obviously degenerates into a kind of grey at a distance.

A B 668.

Continental Touring.

[5832.]-We notice Mr. Fawcett complains that he was charged £1 for his motor cycle when crossing from Folkestone to Boulogne on his recent tour. We have never found this charge made for motor cycles before, and we think he must have encountered some officious person at the docks. In any case, our invariable rule when we are in trouble and we cannot get reparation is to appeal to one of the A.A. officials, who generally rove about the ports. We think they can deal in words with some of the gentlemen referred to in a better way than ordinary civilians. We think the badge of the A.A. and M.U. takes one a very long way.

CAR SUPPLY CO.

Nail Catchers.

[5833.]-Referring to letter No. 5793. I quite agree as to the value of nail catchers. My present machine has a kick-up stand, and by bending the spring so as to give very little clearance, I am practically free from punctures. The puncturing implements (nails, etc.) are thus intercepted almost as soon as they rise from the ground. On the front wheels I arrange the mudguard similarly, and have never had any trouble; but I may say I use Clincher Dreadnought tyres on both wheels and Peter Union puncture-proof rubber bands in both, being 14 stones in weight, and riding a heavy $3\frac{1}{2}$ h.p. two-speed machine (Norton, with P. and M. gear). The flints have cut the back cover a good deal this dry season but I have got off with one puncture (nail) in about 2,000 miles.

AB 668.

Rear reflex lights which have been specially designed for use on farmers' carts. An active campaign in favour of their general adoption is being instituted by the R.A.C. They are made by Lea and Francis, Ltd., Coventry..

Continental Touring.

[5834.]-In France a motor cycle is treated as a motor cycle (12 frs. per annum) for the purpose of taxation if it can be propelled without the engine, i.e., if it has a pedalling gear.

An additional tax of twelve francs is levied for each passenger besides the driver, whether carried on the motor cycle, or in a sidecar or trailer, etc. I have been riding a Triumph and sidecar for three years in France, and pay, therefore, twenty-four francs each year. A motor cycle without pedalling gear might, according to law, be considered as a car and taxed according to horse-power.

H. E. SKEPPER.

Hill-climbing.

[5835.]-I should be interested to hear if any of your readers have ridden from Glenelg to Shiel (or *vice versa*) in the West Highlands? From Glenelg the road rises for six miles, never very steeply, but the last three miles contain several bad corners, and the surface is very soft and rough. This is nothing to the climb out of Shiel at the head of Loch Duich, however. This road rises over 1,200ft. in two and a half miles, exceedingly steeply in places, the surface being very bad, and hairpin corners are too numerous to mention. It would be a severe test for any motor cycle. I should like to see a hill-climb here, though I doubt if many machines would accomplish it.

CUTHBERT.

Increased Power with Cut-out Closed.

[5836.]-With reference to letter 5807 on the above, I would, in all humility, suggest that it is due to the exhaust pipe being short. With a long pipe, it seems to me that the burnt gases must create a good deal of suction, therefore assisting the next charge of burnt gases to be quickly expelled. On the other hand, with a short pipe the gases reach the open so quickly that there is not time for them to help the next expulsion, therefore, air at ordinary atmospheric pressure must be expelled from the pipe at each explosion. It would be very interesting to have the opinion of others riders.

A. D. E. CRAIG.

Improved Starting Arrangements.

[5837.]-One is constantly hearing about the perfection of the modern motor bicycle, but I think there is still great room for improvement in the starting arrangements. I have had some experience lately of a $3\frac{1}{2}$ h.p. single with a geared up starting handle, and, although in pretty good order, I find handle starting far too exhausting, and the ordinary run and jump method more practical.

The other day, it was only by sheer luck, in being at the top of an exceptionally steep hill, that enabled me to start my 5 h.p. twin. The engine was cold, and the belt being soaked by the rain refused to take the engine over compression at ordinary running speeds. For easy starting it seems essential to have (1), rigid drive; (2), small multi-cylinder engine or a half compression device, similar to that fitted to the old Humbers. It is curious that this has not been more widely adopted, as it is of real value.

Again, can a belt-driven machine be called really reliable unless protected by more or less unsightly belt guards? My four-cylinder F.N. has frequently pulled me through to my destination on days when I should never have dreamt of relying on a belt-driven machine. The increased use of chain drive and small multi-cylinder engines is the beginning of a movement that will, in my opinion, extinguish the present standard $3\frac{1}{2}$ h.p. single.

H. E. RENDALL.

Police Methods.

[5833.]-On August 17th I was unfortunate enough to consent to take a friend from Wisbech to Cambridge in my sidecar (7 h.p. Indian). On arriving at March I noticed a constable hold up his hand in a very friendly sort of way, as if he might have been saying, "How are you, old sport?" or I thought perhaps he wants me to slow up, which I did at once, from about 15 to 10 m.p.h. (Note, the energetic young policeman did not exert himself to leave the pavement or call), but when we arrived at the next village (Chatteris), about eight miles from March, we found two more of our obliging friends planted in the middle of the road.

Of course, I pulled up at once, and was told by the inspector that he had received a telephone message from March saying that I would not pull up when requested by the police. My licence was demanded, which, needless to say, I had left quite safely at home, so gave my name and address.

I have now received no fewer than three summonses for this offence—two from my March friend and one from Chatteris—(1) for driving to the public danger, (2) for not stopping when requested, (3) for not producing licence.

I should like to know if any of your readers have ever experienced anything of this sort? I think if we poor motorists are subject to this sort of thing the sooner we get aeroplanes the better. The cases are on September 5th and 12th respectively.

CHAS. BETTINSON.

Variable Gears in Hill-climbs.

[5839.]-You will doubtless be aware of the war we have been waging in different parts of the country with motor cycling clubs who have been barring us from their competitions.

We regret to say that this state of affairs is on the increase, and it is hardly the way to encourage developments and improvements, for clubs, whose members must be interested in the future of motor cycles, to put obstacles in the way of my firm, who have always been noted for the originality of their productions.

Owing to the practically unvarying successes of our machines in hill-climbing events, certain clubs ruled that riders of our machines must have their gear sealed in one position, and not be allowed to benefit from its use. There was a considerable outcry against this, with the result that clubs who wished to pursue this policy framed their rules in a way which, without directly referring to Zeniths, had the desired effect of keeping them out.

We were exceptionally successful at the open hill-climbs held by the Coventry and Warwickshire Motor Club in 1909 and 1910. This club is very largely supported by the Coventry manufacturers, and for us to practically sweep the board there two years running, meant that we were defeating the large majority of picked trade riders.

In 1909 we secured seven first awards, and were first, second, and third on formula in the class for touring machines.

In 1910 we secured six first awards.

This year their programme only allows us to compete in the lightweight class and in the variable gear class.

[In perusing the regulations we notice that of the seven classes variably geared machines are eligible for four.—Ed.]

There are several points which I would ask your readers to note with regard to the 1911 programme, which points are all very much up against Zeniths.

1. Variable gears are not allowed in the touring class limited to 500 c.c. This is strange considering that in the six days' trial there were only nineteen fixed gear machines against fifty-eight variable gear machines.

2. T.T. machines are to have fixed gears. Fixed gear machines were considerably in the minority in the T.T.

3. There is no passenger class this year, though this is admittedly a sidecar year. (The 6 h.p. Zenith has never been beaten when we have run it in passenger events.)

4. There are separate classes for singles and twins with fixed gear. The variable gear singles and twins are thrown together in one class. It rather looks as if they were not wanted.

W. G. BOWER,

Managing Director ZENITH MOTORS, LTD.

Unbusinesslike Methods.

[5840.]-It will be a blessing to many private owners when the present boom is over or at any rate relaxed, as

it is very difficult to get attention from some makers when replacements are wanted. My case, although not quite the same as that of the writer of letter 5791, has the same result, i.e., that I am without the use of my motor cycle for several weeks during the most favourable time of the year for riding. An acknowledgment of the order for a new piston and valves has been received after waiting a fortnight, but it will be another three weeks before they are delivered if I have to wait as long as on one occasion last summer.

As these sort of incidents are talked about amongst motor cyclists it must do the makers, who treat their customers in this way, harm in the long run, as it is much more necessary for the private owner to be able to obtain replacements promptly, than to know that the particular make of engine or motor cycle they are using is continually winning prizes.

The disappearance of the broken step-cut ends of the piston rings mentioned in letter 5795 can be accounted for by their being rapidly worn away. Recently my three rings broke in the way referred to, and on opening up the cylinder the pieces had altogether disappeared from one groove, had worn to quite small nearly round pieces in another, and were considerably worn and the corners rounded off in the remaining groove.

H. M. W. DAW.

The Quality of Modern Tyres.

[5841.]-The increase in the pastime, following the continued improvement of the engines, is being seriously checked by the retrograde quality of the tyres. Now, after the trials, the futility of evading the matter will be evident. It is the same cry everywhere, tyre troubles, in spite of delusive advertisements following record trips and rides. It is one of two things. Either the present-day machines are under-tyred, or the quality has deteriorated. In my own case, an old motor cyclist, I had my new clutch Triumph shod with a famed fabric tyre, paying the extra cost to minimise the possibility of trouble willingly. After normal use of a slow touring nature (no hill-climbs or reliability trials) the back tyre is a wreck, after less than a thousand miles, though my avoirdupois is under twelve stones. I have previously had tyres of the same make which, under the same conditions, have run well over three thousand miles. The present back tyre since the first day has regularly punctured each ride, though pumped board-hard to get better results, at the expense of comfort. In this case it is unquestionably one of poor quality. But why not standardise 2½ in. tyres for driving wheels, instead of 2½ in. It would help to lessen this huge bear, which is seriously affecting the popularity of motor cycling, and will prejudice it. If motor cyclists would voice their troubles through the press, instead of privately hurling anathemas, the volume of complaint would affect the necessary result—better quality and larger tyres.

CLARENDON.

THE VICTORIOUS DOUGLAS TEAM IN THE SIX DAYS' TRIAL.

P. Phillips, G. L. Fletcher, and P. W. Moffatt.

The above riders tied with the P. & M. team for the special team prize.

Silence.

[5842].—Your correspondent [5814] in the last issue of your paper voices the desires of all riders of motor cycles who have some consideration for the feelings of others. The noise of open exhausts is bringing the pastime into ill-repute, and many people refuse to associate themselves with it. The psychology of the open exhaust is interesting. The association of noise with power is atavistic, and goes back to those instincts which made our ancestors howl through the tree-tops, and, later, to whoop and hallo when going for an enemy.

The man who roars and bangs through a peaceful village with an open exhaust is showing degeneration, and, by his quaint attire and desire to attract attention, showing some of the attributes of moral imbecility. Not content with all this, he must needs proclaim his presence with an alarm making a noise like a wailing babe or a trod-on dog. Do, sir, use your influence to stop these brainless bounders making a pleasant pursuit a public nuisance.

I ride a lightweight, and can go quite fast enough without annoying anybody, but the noise of the "Gatling guns" whizzing under my windows wearies me to an

OPEN EXHAUSTION.**Motor Cycle Insurance.**

[5843].—I think possibly some of your readers may not have realised the narrow interpretation placed upon the phrase "used solely for private pleasure purposes," which occurs in some forms of proposal. I have recently learnt with surprise that riding to and from an office or other place where one carries on business does not come within this category and necessitates the payment of extra premium.

CHARLES J LUCAS.

[We submitted the above to our legal adviser who replies as follows: "Regarding your query as to an insurance policy covering motor cycles when *used solely for private pleasure purposes*. It seems to me that these words are unnecessarily restrictive, and it is difficult to know exactly how the court would construe the phrase. It is evident that it would exclude more than the words 'for private purposes only,' and with the word 'pleasure' added I think it is extremely doubtful whether a motor cyclist would be legally covered under such a policy if he used the motor cycle for going to and from his business every day. He would then be using it for *private* purposes, but it could hardly be said that he was using it for *private pleasure* purposes." All motor cyclists should look at their policies, and if similar words are inserted they should request the insurance company to rectify the matter.—ED.]

Record Performances.

[5844].—My brother and I intend to endeavour to ride our machines (an 8 h.p. — and sidecar and a T.T. —) for twenty-four hours' non-stop round Wimbledon Common at a speed of sixty miles per hour. In order that we may ensure this magnificent and eminently useful feat running a normal course and reaching its inevitable, we hope you will be generous enough to print us a few copies of this letter. I should be most grateful for any suggestions or if you will call my attention to any omission.

"Dear Sir,—Re my little affair of 1,440 miles in 24 hours. I have no doubt you will be pleased to learn that in the above amble my machine was fitted with your —. I not only attribute my success chiefly to the admirable behaviour of your excellent —, but we feel sure I could not have put up such a performance without it."

We should want to send copies to the manufacturers of: (1) Engines, (2) saddles, (3) plugs, (4) lamps, (5) belts, (6) tyres, (7) magnetos, and (8) The Bowden Wire Co. Have I omitted anything?

I ought to add we shall be unable to do this ride *à deux* since I have lost every atom of respect for my brother. Apart from his riding an 8 h.p. —, I had always considered him to be, otherwise, sound until to-day. When to my horror I find in his sidecar—what do you think? Nothing less than a hairpin! It is true it is a castor wheel sidecar, but that seems to be totally insufficient grounds to allow some maiden to "castor" incidentals and my brother's reputation to the four winds.

We have quarrelled regretably, but we are still wholeheartedly united in one idea.

We wish, oh we do so wish, Hugh Gibson would ring off.

R. B. ROBERTSON.

Tapless Pumps.

[5845].—I am pleased to see "Ixion's" criticism of the concealed tapless pump, because 't agrees exactly with the results of the experiments I made. This "Ixion" could have easily obtained, and the mechanism is just as reliable as the two-way tap without the drawbacks. My advice to riders is to avoid every pump, concealed or external, depending entirely on a valve. Sooner or later the inevitable little piece of grit will get in, and the pump will fail. There are several others without this risk to be obtained.

A. C. DAVISON.

A Quadcar seen during the Trials.

[5846].—While reading *The Motor Cycle* of last week, I notice you would like further details of quadcar AK 1918. However, as the machine is not finished, I did not send them to you, but will do so at a later date. We have built and sold one on similar lines, which is giving every satisfaction. The machine weighs 4 cwt. as stated, and has an 8 h.p. Chater-Lea engine and three-speed gear box, chain-drive to one rear wheel, and is well-sprung back and front. It climbs the hill out of Burnsall on top gear with two up. I have done so in the presence of well-known motor cyclists. I will send photographs and further details when the machine is completed.

W. GILYARD.

Reliability Trial in North Devon.

[5847].—Re your note in last week's "Current Chat." Mr. Karslake is quite in order when he states that the M.C.C. is the first recognised club to hold a reliability trial over the North Devon route. What I inferred was that the E.P.M.T. is the first club to hold a trial over that ground, and I should also like to point out that the trial in question was formulated during last November Show, and that Easter was the first opportunity that members had of carrying out the trial. We are not, as a club, affiliated to the A.C.U., but the majority of our members are also members of the A.C.U. individually, so there is no object in affiliation, as the E.P.M.T. is essentially a touring club.

I may also mention that Mr. I. B. Hart Davies's tours are nothing new to us, as many of our members have repeatedly toured that country since 1907, but the last trial at Easter was of absolutely a different character, so cannot be classed as a conducted tour as you infer. I thank you for allowing me to use your valuable space.

FRANK H. CHRIMES (Capt. E.P.M.T.).

WINNER OF "THE MOTOR CYCLE" PRIVATE OWNERS' MEDAL.

F. G. Boddington (4½ h.p. Precision), who gained all possible marks in the A.C.U. Six Days' Trial, and finished with his machine in good condition. His performance has been adjudged best of the private owners, although five others ran him very closely.

Broken Piston Rings.

[5848].—I had the same experience as your correspondent "S. H. Crow" [5795] with a $3\frac{1}{2}$ h.p. engine. In my case the cylinder required reboring, and the engine had not been running well. On finding that compression had all but vanished, I removed the cylinder and found the overlapping portions of the step cut ends of two out of the three rings had disappeared. The cylinder was perfectly smooth. I sent the engine away to be overhauled and never heard whether any trace of the bits were found, but the oil on the baffle plate was very discoloured, and I have never seen it so thick before or since. It seemed impossible that the bits could have been ground up, and I was as puzzled as your correspondent. J.L.

The A.C.U. and Road Record Performances.

[5849].—I note that Mr. B. H. Davies states that he drove from Northampton to Torquay "in excess of End-to-end record pace." I presume he means in excess of "average record pace." In any case, such action is hardly consistent with his pronounced views on the whole question of End-to-end records. Time after time has he denounced the record on account of its danger to the public, and now he openly states that he has had a miniature End-to-end on his own.

I trust that I am a fair-minded person, but I cannot help feeling a little upset and disgusted that one of our leading scribes and A.C.U. supporters should openly claim such a deed in the course of an article penned by himself and yet condemn a similar action in others. I reluctantly pen this letter in the hopes that the A.C.U. Committee will realise that pace on the road is not confined to a limited few.

I was banned in the words of the A.C.U. Committee "on the printed reports which appeared in the press." What is sauce for the goose is sauce for the gander, and if the A.C.U. Committee will be consistent they will immediately suspend Mr. B. H. Davies. The case of Mr. B. H. Davies is not, of course, an isolated one, the Scottish and Six Days' Trials were a glorified blind and nothing else. I, personally, do not object to the action of the A.C.U. in suspending me, but I do object to their encouragement of blinding *en masse*. It does not appeal to many of us as typical of British fair play. The whole question ought to be thrashed out now, and if necessary new regulations framed for forthcoming trials, otherwise there is trouble in store.

IVAN B. HART DAVIES.

The Six Days' Trials.

[5850].—I have read with some amusement the long list of gold medal winners in the recent A.C.U. Six Days' Trial. I would like to point out the conditions laid down by the A.C.U. for a machine to gain a gold medal, which rule reads as follows: "A gold medal will be awarded to the entrant of each machine which obtains 100 per cent. of marks for reliability, does not fail on more than one hill, and completes the trial with the whole of its parts in good condition." Anyone reading the results would imagine that all those thirty-three gold medallists fulfilled the above conditions. That this was very far from being the case was apparent to the most casual observer who saw the machines in the Clarendon Hotel yard last Saturday. One of these machines had nearly every spoke in the back wheel broken, and could not possibly have done many more miles without the back wheel collapsing under the rider. Another gold medallist had his rims so much dented that it was with difficulty he could keep the tyre on the rim. Another rider, who rode to Coventry next day, had to stop and actually strap his engine to the frame, as it was practically dropping out.

Whilst I admire the pluck of these riders, who, against all difficulties, brought their machines through such an arduous test, yet I consider that when the A.C.U. make a rule they should stick to it, and not award gold medals to machines which evidently have not fulfilled the necessary conditions.

A suggestion I should like to make for next year's trials is that the sealing might be carried a little further. The only two seals that were attached this year were one round the cylinder and one round the frame, but why not seal the valve caps, which could easily be drilled by competitors beforehand, also the tool bags. I admit it would be a difficult matter to prevent competitors carrying tools in their pockets, but if an official car followed behind, and disqualified any competitor found using anything but a tyre repair outfit, then we should have a reliability trial indeed.

ERIC W. MERRALL.

Road Dressing.

[5851].—There is a length of road alongside the river Soar, between Kegworth Bridge and Kingston-on-Soar which several years ago was paved with a kind of asphalt. I should say it has been down over four years. It is now quite as good as the day it was laid. I believe it was put down as an experiment. Being such a splendid piece of work one wonders why it has not become more generally used. Perhaps this will meet the eye of the Nottinghamshire surveyor, or someone interested who can give the reason. H. UTTING.

The Vicious Dog.

[5852].—Seeing the letter in last week's issue concerning vicious dogs and their treatment, I am reminded of a little device, with the same object in view, which I have used with great success for the last year or so. I dare say most of your readers, at one time or another, have come across that useful appliance for spraying plants, in which the supply of fluid is forced from a tank, strapped on the operator's back, by a small hand lever on the side of the tank actuating a pump.

It has been my invariable practice for the last year to carry one of these apparatuses whenever I go out on my motor cycle. If a weak solution of ammonia be put in the reservoir the effect is most disconcerting (to the dog).

Hoping this tip may be of use to any fellow motor cyclists who have suffered at the hands—or shall we say teeth—of these malicious pests of our highways.

CAVE O CAVE CANEM.

Variable Gears for Cornwall.

[5853].—I have just completed a tour in Cornwall on a single-geared Triumph, without free engine, and although I am quite charmed with the county from a motor cyclist's point of view, yet I am now satisfied that in order to obtain the fullest enjoyment from motor cycling down there a free engine, plus a two-speed gear, is necessary. The principal main roads perhaps would not necessitate this, but get off them, and what do we find?—quite a succession of steep hills with, in many cases, a sharp bend in the steepest part, where, if one is stopped, it is almost impossible to get going again. The surface of most of the roads in Cornwall is really excellent, and I had no puncture in my tour of nearly 1,100 miles, but I feel constrained to unburden myself to you on the question of a variable gear.

I mean to visit Cornwall again as soon as I have an opportunity, but I shall go in for an efficient gear first.

I should like to know the views of some other readers on this subject. C. E. STUART.

SUMMARY OF CORRESPONDENCE.

Will the two motor cyclists who kindly helped a lady and gentleman with Triumph and sidecar outside Leatherhead on the 13th inst. communicate with F. Lacey, the Dell, Camden Road, Sutton, Surrey?

A new lightweight Calthorpe model which has just been placed on the market by the Calthorpe Motor Cycle Co., Birmingham. It was ridden into second place in the Belfast and District hill-climb on the 5th inst.

B.M.C.R.C. SIXTH MONTHLY MEETING.

FIVE NEW RECORDS. NOTES ON THE TIME TRIALS AND HOUR RACE.

Scene at the start of the hour race at Brooklands, in which there were 17 competitors, two breaking the existing hour record for 500 c.c. engines.

THIS meeting (under the rules of the A.C.U.) was held in fine but cloudy weather. There was a fresh breeze blowing, which hindered the competitors in the hour race, especially those on lightweight machines, along the railway straight. The mile and kilometre trials, which were taken together, were run in the reverse direction, to give the riders the benefit of the wind. Five new records were established, the most notable performances being C. R. Collier's kilometre record of 24.52s. in Class E, made on a twin-cylinder Matchless-Jap ($90 \times 78.4 = 998$ c.c.), which is nearly half a second inside the old record, also by Collier. This equals a speed of 91.23 m.p.h., and it is the first time the kilometre has been covered at a speed in excess of 90 m.p.h., though it does not quite reach Collier's speed of 91.37 m.p.h. made in the mile on August 11th last.

H. Martin (twin-cylinder Martin-Jap, 76×55 mm., 498 c.c.) made wonderful times in Class C for machines of a capacity not exceeding 500 c.c., reducing the kilometre record by over 2½s., and the mile by over 5s., his times being—kilometre 30.25s., mile 49.39s. These records give speeds of 73.95 and 72.89 m.p.h. respectively, an increase in speed of 4.67 m.p.h. for the kilometre and 6.71 m.p.h. for the mile.

The existing kilometre record was also beaten in this class by G. E. Stanley ($3\frac{1}{2}$ h.p. Singer) and W. H. Elce ($3\frac{1}{2}$ h.p. Rudge-Whitworth), and the mile record by both the riders just mentioned, as well as by S. Spencer ($3\frac{1}{2}$ h.p. Rudge-Whitworth).

A new record for the mile was set up in Class D (not exceeding 750 c.c.) by S. T. Tessier on a twin Bat-Jap (85.5×64 mm. = 735 c.c.) of 48.76s. beating the former record by half a second, his speed being 73.83 m.p.h.

H. Hunter, on a Bat-Jap of smaller dimensions, was also inside the previous record, and only just over a quarter of a second slower than Tessier. The kilometre records were not lowered in this class, nor were the five miles records in any class. This fact was possibly due to the wind, which was of assistance in the mile and kilometre trials, being a considerable hindrance in the longer distances.

The Second 1911 Time Trials.

CLASS A (not exceeding 275 c.c.).—W. Chitty made fastest time. H. Martin lost his belt while running well, and in the five-mile trial his cylinder head was blown off. No records were broken in this class or in Class B. Chitty's machine seemed to be missing fire occasionally.

CLASS B (not exceeding 350 c.c.).—H. Martin made fastest time, and set up a new record for five miles, there being no

previous record for the distance in this class. He was, however, nearly a second outside record in the kilometre, and rather more than a second in the mile.

CLASS C (not exceeding 500 c.c.).—Martin's record speeds have already been mentioned. S. Spencer returned with his belt hanging loose, but had another trial. The best time in the five miles trial (4m. 43½s.) was made by G. E. Stanley (Singer), but this was 7½s. outside record. Rhys (Triumph), Elce (Rudge), and Spencer (Rudge), also exceeded 60 m.p.h. for the five miles.

CLASS D (not exceeding 750 c.c.).—S. T. Tessier (Bat-Jap) was fastest in this class, and knocked half a second off the mile record. Hunter also exceeded the previous best.

CLASS E (not exceeding 1,000 c.c.).—C. R. Collier was the only rider in this class. He started high up on the banking and came by at a great pace. His record has been already referred to.

Godfrey, Haswell, and Stanley racing neck and neck at over 60 m.p.h. Some very close racing was seen in the hour race.

The Omni-class Hour Race.

This trial was much more interesting from a spectator's point of view than the shorter runs, which were run off one at a time—obviously the best plan for these trials, inasmuch as all the competitors were on the track at the same time, and men were constantly passing at high speeds. In the hour race H. A. Collier (Matchless-Jap) at once took the lead and kept it until, after doing sixteen laps, he was unfortunately obliged to retire with a cylinder head blown off. He had by this time lapped most of the other competitors. The most exciting part of this trial was the very keen race between Haswell (Triumph) and Godfrey (Indian). First one led, then the other, and twice they passed neck and neck, but towards the end of the race Godfrey's inlet valve rocker broke, and his valve then worked automatically. Naturally, his pace dropped, and though he beat the old record by upwards of two miles he

Great enthusiasm was shown in J. R. Haswell's success. Some of the competitors and spectators are seen carrying him shoulder high.

could no longer keep with Haswell, who was travelling wonderfully well. Haswell covered 63 miles 194 yards in the hour. G. E. Stanley (Singer) stopped at the end of twenty-one laps (over 57 miles) half a minute before time for want of oil. H. V. Colver (Enfield), whose machine was running with the utmost steadiness, was only 604 yards outside record, and by far the fastest in Class B. Class A also produced two good performances, W. Chitty (Frays-Jap) and R. O. Clark (F.N.) both exceeding the old record, the former by more than ten miles. R. O. Clark's little engine did its work well. F. A. McNab, who started well, suffered a puncture and had to retire with only two laps to his credit. There were no riders in Class E.

In the table of results those who did not finish are credited with the number of laps they had covered at the time of retiring.

CLASS A (existing record 39 miles 1,615 yards).

Rider and machine.	Bore and stroke.	c.c.	Distance.
			mls. yds.
W. Chitty (Frays-Jap, 1) ...	76 × 60	270	50 239
R. O. Clark (F.N., 1) ...	65 × 75	249	41 1,454

CLASS B (existing record 54 miles 726 yards).

H. V. Colver (Enfield, 2) ...	54 × 74	340	54 122
J. Cocker (Singer) ...	69 × 79	295	43 410

CLASS C (existing record 60 miles 783 yards).

J. R. Haswell (Triumph, 1) ...	85 × 88	499	63 194
O. C. Godfrey (Indian, 1) ...	82.5 × 93	499	62 1,147
W. L. T. Rhys (Triumph, 1) ...	85 × 88	499	59 1,072
W. H. Elce (Rudge, 1) ...	85 × 88	499	57 1,060
G. E. Stanley (Singer, 1) ...	85 × 88	499	21 laps
S. Spencer (Rudge, 1) ...	85 × 88	499	18 "
A. J. Sproston (Rudge, 1) ...	85 × 88	499	14 "
S. D. Timson (Rudge, 1) ...	85 × 88	499	6 "
G. Griffith (Zenith-Gradua, 1) ...	85.5 × 85	488	5 "
F. A. McNab (Trump-Jap, 1) ...	90 × 77.5	492	2 "
W. O. Oldham (Zenith-Gradua, 1) ...	85.5 × 85	488	1 lap

CLASS D (existing record 64 miles 445 yards).

A. Moorhouse (Indian, 2) ...	70 × 76	584	55 1,020
H. A. Collier (Matchless, 2) ...	85.5 × 58	666	16 laps

Colver used a C.A.P. carburetter. McNab, Tessier, and Hunter the J.A.P. automatic, and C. R. Collier an A.M.A.C., but the B. and B. was most in evidence. Sproston had an extra air hole in his inlet pipe covered by a slide.

Most of the machines were belt-driven, the exceptions being the Indian and Enfield (chain), and the F.N. (gear driven). Several had no silencer or practically none. Colver had two long exhaust pipes extending to the back hub.

The whole meeting was excellently managed by Messrs. T. W. Loughborough and A. V. Ebbelwhite, and the latter gentlemen, assisted by Messrs. A. G. Reynolds and T. Dutton, got out the times and distances in wonderfully short time considering the amount of work entailed.

H. V. Colver (2½ h.p. Enfield) who covered 54 miles 122 yards in an hour.

INTER-CLUB RELIABILITY TRIAL.

NORTH-WEST LONDON M.C.C. v. NORTH MIDDLESEX M.C.C.

The rules of this competition called for a team of ten riders from each club, each competitor to make a non-stop run over two circuits of the course, the second round only being timed.

Our correspondent found a very strong muster present from both clubs at the starting point at Bell Bar. The start was delayed by the late arrival of the official responsible for the numbers, who, poor fellow, had had two encounters with the police in the short fifteen miles from town.

The first pair were despatched about 4.30, and this was the last seen of them till the competition was over. They missed their way at the first corner, and had quite a pleasant trip of their own untrammelled by regulations and speed limits.

The course was rendered by no means an easy one by the numerous surprise or sharp corners, but on the other hand, the competitors found it excellently marked with arrows.

Doubtful Stops.

The performances were quite good, for there seemed to be only one stop due to the machine, and of that we are not sure. Miss Berend (N. Middlesex) was seen stopped at the top of Justice Hill; apparently her belt had turned over in the rim. The stoppages were evenly divided between the

two clubs Bennett (N.M.) and Pegley (N.W.L.), both finding the bottom of the same ditch at a very sharp narrow corner where the surface was very loose—no great damage. Cherry (N.W.L.) took the wrong road and dismounted hurriedly just in front of another rider.

This incident raises a debatable point in regard to these competitions. Cherry rode a fixed engine machine, one of the opposing club a free engine—the latter when in error appeared to stop his machine, leaving the engine running, and paddled into the right direction with his feet. He is credited with a non-stop, while the other suffers the full penalty. The reading on such points needs to be made clearer. Fortunately, this did not affect the result, for on calculating the times it was announced that the N.W. London club had won with a score of 45 against 57.

Unfortunately, we are unable to publish detailed performances, but we learn that H. Karslake secures the N.W. London prize for best performance, he and his venerable mount being the essence of regularity.

One of the charms of this event was the delightfully peaceful yet varied scenery throughout the entire run, and the fact that these roads on the east of the North Road are not more used by motor cyclists must, we suppose, be due to the exceedingly loose surface in places.

COVENTRY CLUB'S OPEN HILL-CLIMB.

Over 100 entries have been received in the seven classes of the Coventry and Warwickshire Motor Club's sixth annual hill-climb next Saturday. Nearly all the best known riders will take part, and practically every make of motor cycle will be represented. There is a big list of awards, including four silver cups. The venue of the contest will be made known by programme, a copy of which will be posted to competitors this evening. Readers may obtain a copy, price 6d., on application to the hon. sec., Mr. Geoffrey Smith, 19, Hertford Street, Coventry.

EXETER AND DISTRICT M.C.C.

The final results of the open hill-climb, July 29th, were:

EVENT 1 (lightweights).—1st on A.C.U. formula, W. W. Douglas (2½ h.p. Douglas), silver medal; 2nd, G. Spivey (2½ h.p. Moto-Réve), bronze medal; fastest time, W. W. Douglas (2½ h.p. Douglas), silver medal.

EVENT 2 (touring).—1st on A.C.U. formula, A. L. Ommanney (3½ h.p. Rudge), gold medal; 2nd, L. W. Broadbear (3½ h.p. Premier), silver medal; 3rd, J. A. Neumann (3½ h.p. Rudge), bronze medal; fastest time, L. W. Broadbear (3½ h.p. Premier), gold medal.

EVENT 3 (club lightweights).—1st on A.C.U. formula, H. P. Overmass (2½ h.p. Douglas), silver medal; 2nd, C. S. Hoskins (2½ h.p. Douglas), bronze medal; fastest time, H. P. Overmass (2½ h.p. Douglas), silver cigarette case presented by T. H. Birdsall.

EVENT 4 (touring).—1st on A.C.U. formula, A. L. Ommanney (3½ h.p. Rudge), silver medal; 2nd, C. Roper (3½ h.p. Ivy Precision), bronze medal; fastest time, C. Roper (3½ h.p. Ivy Precision), silver medal.

EVENT 5 (racing).—1st fastest time, A. L. Ommanney (3½ h.p. Rudge), silver medal; 2nd, A. M. Nyott (5 h.p. Indian), bronze medal.

EVENT 6 (club single).—1st on A.C.U. formula, F. T. Wilson (3½ h.p. Rudge), accessories presented by the East London Rubber Co.; 2nd, P. Pike (3½ h.p. Humber), silver medal; 3rd, W. P. Harding (3½ h.p. Rudge), bronze medal; fastest time, F. T. Wilson (3½ h.p. Rudge), pair of covers presented by the Kempshall Tyre Co., Ltd.

EVENT 7 (racing).—1st fastest time, C. Roper (3½ h.p. Ivy Precision), silver medal; 2nd, S. J. Saunders (3½ h.p. Rudge), bronze medal.

EVENT 8 (club multi).—Scratched through lack of entries.

EVENT 9 (club racing).—1st fastest time, A. C. Hardy (3½ h.p. Norton), silver medal; 2nd, R. Holloway (3½ h.p. Premier), bronze medal.

A. C. Hardy wins the gold medal presented by Nye and Co. for the fastest club time of the day.

MOTOR CYCLING CLUB

The M.C.C. members' hill-climb will be held on Saturday, September 9th, at 3 p.m., on a hill within easy reach of London, to be announced later. Commodore Sir R. K. Arbuthnot has presented a silver cup as a prize for Class 2. Machines must be standard touring pattern, fully equipped for the road. Free engine clutches and variable gears are eligible to compete in all classes.

- (1.) For motor cycles of engine capacity not exceeding 300 c.c. for singles and 340 c.c. for twins.
- (2.) For single-cylinder engines not exceeding 300 c.c.
- (3.) For multi-cylinder engines not exceeding 340 c.c.
- (4.) For passenger machines, unlimited capacity.
- (5.) Any motor cycle; fastest time to win.
- (6.) For cars limited to 30 h.p.

The awards in Classes 1, 2, 3, and 4 will be decided on the

$$\frac{\text{formula } W}{T \times C}$$

SHROPSHIRE M.C.C. HILL-CLIMB AT WENLOCK EDGE LAST WEEK-END. Hardwick (J.A.P.), closely followed by Owen (Bradbury).

A NEW SIDECAR TYRE.

Messrs. Charles L. Cuthbe and Co., 37, Great Eastern Street, E.C., have introduced a special tyre for sidecar work which is known by the registered name of the Max Cycar tyre. As will be seen by the illustration, the tread consists of two prominent ribs, and in the space between the lozenges are moulded in the rubber. The pattern appears to be one which should be most effective in minimising the risk of side-slip. The tread is most substantial, and the amount of rubber generally in the tread is quite worthy of notice. The whole is built up with four layers of fabric. The tyre is

made in all the usual sizes. This tyre has been on the market about a year, and has, we are assured, been most successful. Another Max speciality is a rubber belt, which, though it possesses outwardly no special features, has met with approval among motor cycle riders.

Prevention of Tyre Leakage.

Climax Leakure is a preparation which is intended to be injected into inner tubes with a view to preventing leakage in the case of a puncture. One of its chief features is that if it oozes through a hole in the tube it can be easily washed off, and it does not in any way prevent patches from sticking.

Tyre Stopping.

Climax Tyre Stop is a tyre stopping of a different nature from any we have seen before, and the method of using it quite simple. The material consists of a brick-red slab of rubber preparation. Both it and the cut to be filled up are first warmed by holding a hot iron near them, and then the preparation is pushed into the cavity. Though it is desirable to warm the cut, this is not absolutely necessary, and the preparation may in cases of emergency be warmed on a radiating fin of the engine, after the latter has cooled down a little.

A HANDY BENCH LATHE.

Motor cyclists who are mechanically minded enough to handle their own repairs, provided they have the necessary tools, will be interested in the little bench lathe illustrated. This is one of Drummond Bros.' machines for repair work. It is self-acting, sliding, boring, and milling, and will cover a very wide range of work. Thought out at first to supply the needs of model makers, etc., it was soon seen to be an almost ideal tool for small repairs to motor cycle engines, etc.

Its dimensions are: Length over all, 2ft. 11in.; length of bed, 2ft. 4in.; height of centres, 4in; length between centres, 12in; diameter of work admitted over saddle, 6in. The bed of the lathe is circular, allowing varying heights of the

saddle and slide rest for milling purposes, on which, without extra appliances plain milling, slotting, and keyway cutting can be done as well as turning, boring, and screw cutting. The makers say their lathe is guaranteed accurate to one-thousandth of an inch and rigid enough for the heaviest work it can hold. For those who wish to fit this lathe to their own benches a separate treadle is made, but the machine can be supplied on stand with treadle complete. The maker's address is Guildford, Surrey.

EASY STARTING.

The decompressor put on the market by the Aston Motor Accessories Co., Ltd., ought to come as a boon to motor cyclists who have any difficulty in starting their engines, or if they are unable to run them slowly in traffic. With this device it is possible to decrease the compression very gradually. The thread is the same as an ordinary sparking plug, and it may be fitted at any convenient place; for instance, in a valve cap.

It consists of a small double-seated cylindrical valve with a seating at each end. On the side of the walls are longitudinal slots, through which the gases are allowed to escape, and then out through holes in the cap at the top of the device. This valve is free to move between its two seatings, and under compression, firing and exhaust strokes it is, of course, making a joint against the top

seating, returning to the bottom seating again on the suction stroke. The time allowed for the escape of gas through the slots is the time it takes the valve to move from the bottom to the top of the seating on the compression stroke, and as the top seating is movable through the medium of a Bowden cable from the handle-bar, this time may be regulated, and, as a result, more or less decompression will take place.

The system of levers as shown in the illustration makes it possible to positively lock the valve seating when the device is out of action. The top ends of the short levers are pivoted to the body of the decompressor, and the top ends of

the long levers to the steel bar connected to the Bowden wire through a contracting screw. The handle-bar control is in the shape of a trigger fitted with a ratchet and release arrangement.

HINTS AND TIPS FOR MOTOR CYCLISTS.

TO AVOID NIPPED TUBES.

367. When a rider is fitting a new tube at his leisure, he usually rolls back the second bead of the cover to make sure he has not nipped the inner tube anywhere. This is a comparatively lengthy process, and not everybody is acquainted with an alternative process, which is almost as reliable. After both beads of the cover are engaged, bounce the loose wheel on the ground ten or a dozen times, or hit the cover all round with a mallet, the tube containing as much air as was pumped in during the fitting of the cover, or a trifle more. The bouncing will generally cause a nipped tube to roll out from under the beads, and adopt its proper position.

TO GET COVER AND VALVE HOLE IN REGISTER.

368. Sometimes when a motor cyclist has laboured long and perspiring to get a new stiff cover on to a wheel, he finds to his disgust that the valve slots in the bead do not register with the valve hole in the rim. Of course if any help is available, two men can usually haul the cover round the rim with their hands, till the holes are all registered accurately; but if the fitter is single-handed, the following garage tip, often used for car tyres, may be of assistance. Fit the wheel in the forks of the machine, and fake up some sort of stop which will allow the wheel to revolve a few inches, but not more. (The writer put a tyre lever wrapped in a cloth through the spokes and resting on the forks.) Then put both hands on the tyre, and pull the wheel sharply against the improvised stop. The stop will check the wheel rim suddenly, and all the force of the pull will come upon the tyre, which will shift a little in the required direction. Two or three repetitions will shift the cover as much as a foot, no matter how tightly it fits.

Care is needed in applying this tip to motor cycle wheels, but even wire cycle spokes will stand it, though, of course, it is more workmanlike in dealing with the wood or wire spokes of a car wheel.

BROKEN INLET VALVE SPRING.

369. On a recent run I was bothered for two hundred miles by erratic running, which appeared to be due to a partial petrol starvation, caused by a floating piece of dirt in the jet or in the petrol tap. Sometimes when I endeavoured to accelerate, the engine would not run up to its normal speed, and perhaps without any further change of the lever setting she would take the bit between her teeth and bolt off in her best form. I did not discover the real cause till I happened to remove the cylinder, when I found that the spring of an overhead inlet valve was broken in a concealed position. Sometimes the spring acted as a full spring, sometimes as a threequarter spring only, which explained the erratic running. Owners of overhead valve engines should note this.

ESSEX M.C. GYMKHANA.

Belt fixing competition : G. L. Fletcher (2½ Douglas), on the right, proved the winner.

The above annual event was satisfactorily run off at the Essex Track, High Beech, Loughton, on Saturday last. The attendance was not so good as it might have been, which was partly attributable to counter attractions elsewhere.

The first event on the programme was a belt fixing competition, which was won by G. L. Fletcher (2½ Douglas). Then followed tilting at the ring and Turk's head cutting, the winner being L. A. Baddeley, who rode his 5 h.p. Baddeley-Jap.

The chicken stealing event was somewhat novel, the competitors drove sidecars and cars, and had to circle the track once, the passenger had to steal a chicken from the run, return to the vehicle, which was again driven round the track, and return the annexed bird to its pen. This provided some amusement, and was eventually won by Mr. Bates with a 20 h.p. Ford car, Alan Hill (3½ h.p. Rudge and sidecar) being second.

Bobbing for apples and needle threading followed, both being won by G. L. Fletcher, and then came the flower show race for passenger machines. The lady passenger selected six flowers, the vehicle was driven round the track, and on arrival at the flower beds each flower had to be planted in a different plot and to be again collected. This was won by the driver of the Ford, with Alan Hill again second.

Musical chairs was won by G. L. Fletcher, who is quite an adept at gymkhana events, having won four prizes at this competition alone.

Our illustrations prove that an enjoyable afternoon was spent by the members and their friends.

A little incident of the day was that the hon. sec., Mr. F. G. Smith, borrowed Fletcher's machine for a spin around the track, and underestimating the speed of the Douglas collided with the railings, fortunately without injury to himself.

LATE NEWS FROM THE CLUBS.

North Middlesex M.C.C.

There will be a social run on the 2nd September, followed by a general meeting of the club at the Abercorn Arms, Stanmore, at which it is hoped there will be a full attendance of all members.

Scottish Border M.C.C.

A successful speed-judging and petrol consumption trial was held on the 26th inst. A. Wilson (Triumph and sidecar), won the latter with 93½ miles to the gallon. J. McKie (Douglas) won the speed-judging contest with a total error of 58½s.

Essex M.C.

The Essex Motor Club's annual twenty-four hours York run, for the Triumph Challenge Cup, takes place on September 8th and 9th. Entries close first post Tuesday, September 5th. Full particulars and entry forms from B. C. de W. Siffken, Forest Side, Buckhurst Hill.

North-west London M.C.C.

The gymkhana to be held by the N.W. London M.C.C. at the Stadium, on September 9th, comprises fifteen events, viz., scratch and handicap races for lightweights, singles up to 500 c.c., singles of any size, multi-cylinders, and sidecar machines. There will also be potato, Turk's head, air balloon, relay, and sidecar punting races, and musical chairs (1) for lady passengers and (2) for solo machines. The last event is a handicap race of four miles for any machine.

Mersey M.C.

The winning team in the club's team trials held on Saturday last, over a course to Buxton and back, is given below. These team trials are very popular in the club, and a good turn out is always assured. The prizes for this event are presented by a committeeman, Mr. Lake. Winning team: S. W. Phillpot (Humber lightweight), F. Rees (Bradbury), F. C. Jones (Bradbury), and G. Morley (Triumph).

On September 9th a team of four riders of the Mersey Motor Club are meeting a similar team of the Birmingham M.C.C. in a two mile race at the New Brighton Tower track.

Essex M.C. Gymkhana at High Beech. The chicken-stealing race, in which competitors had to descend from a sidecar and capture a live—very live—chicken from a pen, and then scurry to the finishing post. The rider is B. Alan Hill (Rudge and sidecar), who finished second.

SPECIAL FEATURES

No. 7: A COMPETITOR'S IMPRESSIONS OF THE SIX DAYS' TRIAL.

THE JUDGE'S REPORT.

B.M.C.R.C. MEETING AT BROOKLANDS.

Benevolent Fund Picnic.

The Manchester centre of the C. and M.T. Benevolent Fund are holding their fifth annual picnic to Styal on Sept. 6th, and cordially invite all motor cycling members of the centre to attend. The meet will be at the White Lion, Withington, at 2 p.m.

Class 7, open to "all comers," which was only included after the regulations had been circulated, has proved a most popular event. The entries are divided as follows:

Class 1	23 competitors
" 2	8 "
" 3	33 "
" 4	5 "
" 5	6 "
" 6	7 "
" 7	30 "

Besides the above there are several teams of three in completion for the team prize. The venue remains a secret until tomorrow (Friday), in order to prevent practising on the hill. A cinematograph operator will be in attendance.

The Albion Disc Clutch.

The overall width of the Albion clutch hub, described in the last issue, is anything required from 5½ in. to 6½ in.

More Records Broken.

Yesterday (Wednesday), at Brooklands A. Moorhouse, on a twin Indian, 82½ by 93 mm., beat the Class E hour record, riding 70 miles 1,388 yards. Fifty miles were covered in 40m. 59½s. Mr. A. V. Ebbelwhite took the times.

The Irish End-to-end Record.

Hugh Gibson writes us from Hotel Metropole, Cork, where he is at present sojourning with his eye on the Irish End-to-end record. He is quite jubilant over the fact that if he exceeds the legal limit in Ireland, the Auto Cycle Union will not be able to inflict any further penalties. By the way, aspirants to road record honours might do worse than apply to the House of Keys for a permit to go round the T.T. course till time was up. Isle of Man authorities are always ready to listen to enterprising ideas for popularising the island and amusing the visitors in the off season.

The Danger of Skidding with a Passenger on Carrier.

A somewhat serious accident occurred at Brighton Road last week as a result of which Wm. Gardee, 28, of 33, Bethnal Green Road, is lying in the Croydon Hospital suffering from injuries to his leg and hip. Gardee was sitting on the back of a motor cycle, which was being driven by a friend of his, when the machine skidded, fell across the tramlines and under a passing tramcar. Gardee was caught in the cow catcher, but the rider escaped without any injury beyond a shaking. He was taken to the Croydon Hospital, where it was found that he was suffering from dislocation of the right leg, severe bruising of the hip, and bruising about the head. The machine was badly damaged, and it was some time before it could be got out from underneath the car.

FUTURE EVENTS

- Sept. 2—Coventry and Warwickshire M.C. Annual Open Hill-climb.
 " 9—M.C.C. Members' Hill-climb.
 " 9—Torbay M.C.C. Annual Open Hill-climb.
 " 16—Auto Cycle Union Inter-club Championship, in the Midlands.
 " 18—Edinburgh and District M.C. Open Hill Climb at Amulree.
 " 23—B.M.C.R.C. Race Meeting at Brooklands.
 Oct. 14—A.C.U. Quarterly Trial (Midland centre) fourth and last of 1911 series.

The Single-cylinder Hour Record.

J. R. Haswell's triumph of last Saturday is likely to be short-lived. As we closed for press on Tuesday we were advised that O. C. Godfrey was to go for the hour record on a single-cylinder Indian in the evening at Brooklands.

International Matches at Brooklands.

A printer's error crept into our "Current Chat" columns last week with reference to the cubical capacity of the J.A.P. used by C. R. Collier in the international matches at Brooklands. The correct figures are 998 c.c., not 983 as published. By the way, if the bore of motor cycle engines increases very much *The Motor Cycle* cubical capacity table will require revision. At present it only goes up to 90 mm.

Keen Competition at Perth.

It will be remembered that in the Perth and District M.C.'s reliability trial on June 5th for the Club's challenge trophy and gold medal and the Kempshall Tyre Co.'s and other prizes, six members tied with full marks for first place. A run-off in the form of a fifty miles non-stop trial succeeded in eliminating one competitor only, and on Wednesday, August 16th, the remaining five again toed the line in a thirty miles non-stop trial on a 20 m.p.h. basis over the Rhynch Circuit, near Perth. The conditions were stringent, disqualification being the penalty for a stop, while two chronometric controls were in operation, one mark being deducted for each second in arrear and two marks for each second in advance of schedule time at each control. Mr. W. Murray, who, unfortunately, punctured a few dozen yards from the start, was the only contestant who failed to make a non-stop run.

The results, which have just been issued, are as follows. 1, D. Batchelor (3½ h.p. T.T. Triumph), minus 446, club challenge trophy and gold medal; 2, J. Y. Cairnie (3½ h.p. T.T. Triumph), minus 634, Kempshall heavy non-skid cover, presented by the Kempshall Tyre Co. of Europe, Ltd.; 3, Bruce Syme (3½ h.p. touring Rudge), minus 720, Kempshall anti-skid cover, presented by the Kempshall Tyre Co. of Europe, Ltd.; 4, J. W. Adamson (3½ h.p. T.T. Triumph), minus 1,029, spare tube in case. The time-keepers were Messrs. Peters, Lyle-Watt, and Robertson.

An Unmarked Danger Spot.

There is an unmarked danger spot on the Edinburgh and Berwick-on-Tweed cross-roads between Cockburnspath and Ayton. It takes the form of an S curve with high hedges on both sides. Several accidents have occurred there, the last being a collision between a motor car and a motor cycle.

Saturday's Open Hill-climb.

Entries for the Coventry and Warwickshire M.C. hill-climb next Saturday have again assumed record figures. Every class has filled, including the one for ladies, in which there are five entrants.

J. R. Haswell (3½ h.p. Triumph), the new holder of the hour record, the distance he covered being 63 miles 194 yards. Mr. Haswell is a private owner, and resides at Crick, near Rugby.

A new walking and riding waterproof coat, the tails of which may be wrapped and secured by spring buttons round the rider's legs to serve the purpose of overalls. It is sold by Wilks Bros., St. Simon Street, Salford, Manchester, and should especially appeal to motor cyclists.

Lancashire's Loss is London's Gain.

A. J. Moorhouse, of the Manchester and other motor clubs, is leaving Cottonopolis to take up other duties for his firm in London. He has, probably, won more prizes than any other northern amateur motor cyclist. Further, he has won hosts of friends.

A New Pattern Douglas.

W. W. Douglas has had a 5 h.p. twin-cylinder machine built up on the lines of the world-renowned 340 c.c. twin, and is about to make tests of it with a sidecar attached. It is not proposed to market this type next year at any rate, but there has been such a pronounced demand for a big horizontal twin that Messrs. Douglas Bros. have in their usual thorough style commenced experiments early. Mr. Douglas told us last week that he expected to journey to the Coventry club's hill-climb next Saturday, but will not take part.

Saturday's Duel at Brooklands.

The most exciting duel witnessed at Brooklands since the Collier-de Rosier matches was the one between J. R. Haswell and O. C. Godfrey at Brooklands last Saturday, in which the private owner emerged successfully. It is an interesting fact that both beat world's record. It is said that Godfrey's Indian had been sent specially from the States for racing on Brooklands, and it is certainly the fastest of its kind yet seen on this side of the Atlantic, and it is not likely that the hour record will be allowed to stand where it is at present. The now famous quotation, "It is not in the air, it's in the engine," was a common expression.

The A.C.U. and Yorkshire Farmers.

A lively correspondence has been running in that anti-motorist journal, the *Yorkshire Post*, about the Six Days' Trials. Some horse owner's animal was alleged to have been badly frightened one day by a motor cycle, with the result that a long letter appeared adversely criticising the trials, competitors, and the route chosen. One of the chief points seems to be that on one day a farmers' market meeting was disturbed, but why farmers and others should be allowed to block the traffic of market towns, and yet motorists may not stack their machines in the public square or anywhere else without a protest, is merely because new ideas take longer to assimilate.

The A.C.U. Six Days' Trials.

As we pointed out last week in giving the weights of some of the Six Days' Trials machines, they were in several cases loaded up with spare cover, tube and belt, and the tanks were full. G. L. Fletcher advises us that his Douglas had one and a half gallons of petrol, one quart of oil, spare cover, tube, and two belts, beside a suit of waterproof overalls.

T. Silver writes to say that he was timed by A.C.U. officials to remove the rear wheel of his Quadrant in 6 mins. Incidentally, he adds that the lowest gear he used throughout was 5 to 1, which says something in favour of the power of the new Quadrant engine.

As will have been observed from our tabulated list of results which appeared in the last issue, only three riders of single-gear machines scored full marks for reliability, and gained gold medals. They were S. T. Tessier (Bat-Jap), C. Williams (3½ h.p. Triumph), and W. F. Newsome (3½ h.p. Triumph).

In our report of Friday's run we mentioned A. J. Stevens among the failures on the steep climb leading to Skyrholme Moor. Mr. Stevens has since written assuring us that he succeeded in climbing every hill, but as his number is quite clear on our list, we can only presume that the member of our staff at

that point booked it in error. The A.J.S. riders had no necessity to take off their cylinders for cleaning purposes, grind in valves, or tinker in any way.

A Novel Challenge.

A party of cyclists of the Bristol Bicycle and Motor Club who toured through North Devon at Whitsuntide offered a gold medal to any motor cyclist in the club who would ride over the exact route on his motor cycle, the cyclists claiming that this road, owing to its bad condition and very severe gradients, was unrideable by a motor cycle, and that this was proof of the superiority (*sic*) of the push-cycle. The route lay through Dunster, Wheddon Cross, Exford, Simonsbath, thence the new road to Lynmouth, across Exmoor, on *via* Lynton, Lee Abbey, Woody Bay, Hunters' Inn, to Ilfracombe. One member—Mr. Adams on his two-speed A.J.S.—set off from Bristol on August 14th at 8.30 a.m., arriving at Wheddon Cross at 11 a.m., Lynmouth 12.25, Lynton 12.27, and Ilfracombe at 2.30 p.m. He had to check at each post office on the route, and send an official card with the time and a signature. The two minutes' difference between Lynmouth and Lynton shows how his machine climbed the hill between these two places, well known as such a terror to cars and cycles. The worst part of the road was where a fallen wall had been replaced by wire fencing and only a part of the stones broken up; some were quite ten inches square, and owing to his footrest catching against one, he ran over another standing about six inches high which fouled the crank case, the bicycle acting as a see-saw until he lifted it clear. After this he walked alongside, slipping the clutch, with the low gear engaged. The hill to Hunters' Inn and Pañacombe Hill were both very loose and steep, very similar to Lynton Hill, but Mr. Adams had no trouble with either machine or tyres on both journeys. The party of cyclists who acted as a committee were unanimous in opinion that he had covered the exact route after his description of the road.

AFTER THE 1,000 MILES TRIAL.

A group of six days' trials competitors just previous to leaving Harrogate for their journey South. The riders are, left to right: P. Phillips, W. W. Douglas, W. Creyton, H. Greaves, S. Wright, F. G. Edmond, P. J. Evans, H. V. Colver, and P. Grout. The official Humber car is seen in the background.

THE A.C.U. SIX DAYS' TRIALS IN YORKSHIRE.

THE JUDGE'S REPORT.

General.—The 1911 Six Days' Trial, with Harrogate as a centre, has been the most severe yet the most successful of the series. Each day's route included long stretches of rough moorland road; ruts, stones, and dust inches deep, in many places making severe tests of the riders' skill. The riders were required to ride to schedule between speed limits of 18 and 20 m.p.h., their times being checked at intervals of thirty miles on the average, under a penalty of one mark lost for each minute outside the maximum or minimum time. They were further required to make clean ascents of ten hills on which observations were made, pedalling being permitted only in the cases of machines having single-cylinder engines less than 300 c.c. capacity, or twin-cylinder engines less than 340 c.c. capacity. The observed hills were Wass Bank, Sutton Bank, Arkengarthdale, Scarth Nick, Garrowby Hill, Blue Bank, Greenhow Hill, Kidstone Pass, Heaton Woods, and Brownstay Ridge.

The conditions for the awards were: A gold medal to the entrant of a machine which did not lose any marks on time checks, did not fail on more than one hill, and finished in good condition; a silver medal to the entrant of a machine which did not lose more than 100 marks on time checks and did not fail on more than two hills; a bronze medal to the driver who finished within two hours of his maximum time on Saturday evening, but did not obtain any other award. These conditions were so onerous that before the beginning of the trial and even after the completion of the first day's route, the most liberal estimate was that ten to fifteen gold medals might be won. The great number of gold medals won (thirty-three out of seventy-seven starters) is a tribute to the excellence of the machines, to the skill of the riders, and (not an unimportant factor in such a trial) to the splendid weather conditions from start to finish.

Of the machines which finished but lost marks on time checks, it may be said in general that tyres were the only trouble. The conditions of the trial permitted stoppages without penalties, provided the times of arrival at the checking stations were inside the limits. This was generally taken advantage of, for the purpose of cooling engines at the foot of an observed hill. On several hills which were not officially observed the failures were more numerous than on the stiffer observed hills. In future trials, the regulations might be framed so that the machines should climb the hills on the run, without stopping to cool engines.

Recommendations for Awards.—The gold, silver, and bronze medals are automatically settled by the performances of the machine, and the regulations above referred to; the only detail left to the judge's discretion being the interpretation of the phrase "completes the trial with the whole of its parts in good condition."

For the Trade team prize, the teams of Messrs. Douglas Bros., and of Phelon and Moore, Ltd., lost no marks on time checks, did not fail on any hills, and finished with the machines in good condition, and are, therefore, bracketed equal.

For the Club team prize the best performance was by the Yeovil and District M.C.C. team. The regulations state that "this Special Prize will only be awarded provided at least five teams are nominated." As only four teams were nominated I cannot make any recommendation as to the award.

It is a difficult matter to allot *The Motor Cycle* gold medal for the best performance by a private owner on a motor bicycle. It will be seen on reference to the tabulated results that the following six private owners have perfect records of performance, viz.: No. 20, E. W. Merrill; No. 21, P. W. Moffatt; No. 25, G. E. Whitworth; No. 34, Jesse Baker; No. 51, J. J. Day; No. 60, F. G. Boddington. All six machines have two-speed gears, the engines varying from 340 to 600 c.c. capacity.

I have no data to determine the best performance of the six, but if the award were left to my discretion (or caprice) I might award it to No. 60, F. G. Boddington. His machine has a 4½ Precision engine, 600 c.c. capacity, Phelon and Moore chain drive, two-speed gear, and Chater-Lea parts; and his performance might be said to include the design of his machine.

However, this expression of my opinion cannot necessarily be binding on the donors; it might justly be urged that

the lightweight small engine machines should have the preference.*

The Motor Cycle gold medal for the best performance by a private owner on a passenger machine is won by No. 79, J. Tassell.

The performance of No. 66, W. D. Slater, on a 2 h.p. Aleyon, with a small engine, 248 c.c. capacity, and only a single drive, was remarkable. He failed to make clean ascents of Wass Bank and Sutton Bank, but succeeded on the other eight hills. He also lost five marks on time checks. The award of a special medal is recommended.

Frames, Wheels, Brakes, etc.—The structural parts of the machines leave little to be desired. A pair of front forks bent by collision, a few carriers and stands loose or damaged by collision, and a few cases of broken spokes in back wheels, sum up the casualties. A few front wheel brakes were more or less inoperative at the finish of the trial.

The Power Plant.—A few retirements are reported due to engine trouble. One competitor reported on Thursday morning that a seized piston would compel him to retire. He evidently got it going again all right, and completed the trial in good style.

The tanks, their fastenings to the frame, and their pipe connections seemed all in perfect condition at the finish.

Silencers are not yet as silent as is desirable.

Transmission and Speed Gears.—One retreat was due to the belt rim coming adrift, and the Morgan runabout retired owing to gear transmission trouble.

Of the machines with single speeds, only four won gold medals, three others climbed all the hills, but lost marks on time checks, seventeen single speed motor bicycles started, so the performance of the single speed machines is on the average distinctly inferior to that of the variable gear machines. Both the big engine single speed Bats made clean ascents of all the hills.

There were many varieties of variable speed gears represented in the trial, the Armstrong three-speed hub gear being the most notable addition since last year. Most of these gears are combined with a clutch, most useful for traffic riding, permitting of slow riding or the stoppage of the machine without stopping the engine. One of the most valuable features of the Armstrong three-speed hub is its easy adaptability to almost any machine. Of the seventy-seven starters, fifteen were fitted with Armstrong gears, eight gaining gold medals. Of the others, three retired owing to engine or other troubles, the remaining four had only three hill failures divided between them.

Tyres.—As already stated, loss of marks on time checks were due principally to tyre trouble. Many machines have the back wheel quickly detachable so as to give easy access to replace a faulty tube or cover; other machines leave much to be desired in this connection. Now that tyre manufacturers have standardised the sizes of motor cycle wheel rims, tyre trouble may become less and less in future.

Accessories.—The various accessories and the methods of fastening them to the machines seemed quite satisfactory. Perhaps the only qualification that need be made is that the clips for fastening horns are unsatisfactory, most of the horns having been somewhat loose on the handle-bars.

Weight.—A few representative machines were weighed at the finish of the trial, in the same condition as they had been running during the week. The so-called lightweights varied from 130 lbs. to 163 lbs.; the greater weight being that of a machine which had just been filled up with petrol. The 3½ h.p. machines varied in weight from 200 lbs. to 284 lbs. Even allowing for weight of petrol, about 7 lbs. per gallon, these weights are rather startling.

Conclusion.—This year's trial reveals a considerable improvement in the reliability of the motor bicycle. The conditions were more severe than those of last year's trial, yet the percentage of gold medals is more than doubled. For next year the conditions must be made still more onerous, so that the percentage of gold medals awarded may be again lowered to a reasonable figure.—ARCHIBALD SHARP, Judge.

* Mr. Boddington wins the medal, as decided by the judge, but as Mr. Sharp is almost equally impressed with the performances of the other five riders mentioned, we have decided, subject to the approval of the A.C.U., to offer souvenirs in the form of silver medals to Messrs. Merrill, Moffatt, Whitworth, Baker, and Day.—Ed.

CLUB NEWS.

Sheffield and Hallamshire M.C.C. Start of the 44 miles penalty contest last Saturday from Owl Bar.

Hull and East Riding A.C.C.

The results of the reliability trial held August 19th are as below: 1, E. Downs ($3\frac{1}{2}$ P. and M.), marks lost 0; 2, J. F. Walton ($3\frac{1}{2}$ B.S.A.); 5; 3, A. E. Brown ($3\frac{1}{2}$ B.S.A.), 7, and E. B. Thomlinson ($3\frac{1}{2}$ Acme Kestrel), 7.

Torbay and District M.C.C.

With regard to the open climb on September 9th, the secretary desires it to be known that wherever "two or three speeds" is mentioned in the entry forms, it is intended to cover all such gears as the Zenith-Gradua. The last day on which entries can be accepted is September 2nd.

Sheffield and Hallamshire M.C.C.

On Saturday last a penalty contest was held, starting and finishing at Owl Bar. The riders started at minute intervals, and proceeded across the moors *via* Baslow, Calver, Froggatt Edge (a steep winding gradient), Fox House Road, and back to Owl Bar—a circular run of eleven miles, which had to be covered four times. Competitors to lose marks for every five minutes they were early or late from a time allowance of thirty-five minutes.

The results are as follow: 1st, Durant ($3\frac{1}{2}$ h.p. Durant-Jap); 2nd, Dakin ($2\frac{1}{2}$ h.p. Douglas); 3rd, Short (8 h.p. Chater Lea and sidecar); 4th, Hill ($3\frac{1}{2}$ h.p. Triumph); 5th, Stacey ($3\frac{1}{2}$ h.p. Rudge).

Marlborough Athletic Club.

The London-Coventry reliability trial on the 12th inst. secured an entry of twelve, and seven competitors made non-stop runs. The first and second prizes were presented by the Kempshall Tyre Co. (1 heavy non-skid cover and 1 light non-skid cover). Results were: 1st, W. Goodhugh ($3\frac{1}{2}$ h.p. Brown); 2nd, A. W. Loughlin ($3\frac{1}{2}$ h.p. Peugeot); 3rd, A. W. Hunt (5 h.p. Sarolea) and J. C. Ball ($2\frac{3}{4}$ h.p. N.S.U.)

Doncaster and District M.C.C.

A speed-judging competition was held last Thursday over a circular and very deceptive course through Conisborough, Edlington, and Batley, which had to be covered four times, making a total of about 35 miles. The first prize (a pair of Palmer cord tyres with inner tubes), as well as the second and third, were kindly given by the Palmer Tyre Co., Ltd., to whom the club is most grateful. Twelve started, and the accuracy with which they judged their allotted speeds was remarkable considering the strong head wind experienced towards Conisborough. The final results are given below:

Rider and machine.	Average error.
1. J. S. Smith ($3\frac{1}{2}$ Bradbury) ...	76.8s.
2. F. H. Dunstan ($3\frac{1}{2}$ Rudge) ...	145.47s.
3. T. H. W. Dew ($3\frac{1}{2}$ Triumph) ...	165.5s.
4. L. Baker ($3\frac{1}{2}$ Rex) ...	207.5s.

Members of the Hawick M.C.C. (Edinburgh) setting out for a hill-climbing contest last Saturday at Haughhead, Hawick

Bradford M.C.C.

The awards for the Bradford-Dunbar-Bradford 24 hours' reliability trial, held on August 22nd and 23rd, are:

CLASS I. for Solo Machines.—1, T. Bullus (P. and M.) 0 points, Triumph cup and gold medal; 2, Miss I. E. Pickles (Scott), 23, silver; 3, F. Kilburn (Triumph), 245½, silver.

CLASS II. for Passenger Machines.—1, J. N. Longfield (Scott and sc.), 3½ points, Phelon and Moore cup and gold medal; 2, P. Shaw (P. and M. and sc.), 10½, silver; 3, H. Russell (Chater-Lea and sc.), 47½, silver.

CLASS III. Teams of Three Riders.—1, C. Sidney (Triumph), Batley, gold medal; S. Todd (Triumph), Bradford, Wm. Briggs cup and gold medal; and R. A. Horsfall (Triumph), Dewsbury, gold medal. 2, C. Thacksay (J.A.P.), Ilkley, silver medal; A. Drummond (Rex), Ilkley, silver medal; and A. Denby (Rudge), Ilkley, silver medal.

M.C.U.I. (Ulster Centre).

The results of the open speed trials held at Magilligan Strand last Saturday by the M.C.U.I. were:

TEN MILES SCRATCH for machines not exceeding 500 c.c.

Rider and machine.	M.	S.
1. A. Kirk (3½ h.p. Triumph) ...	10	39
2. L. McKisack (3½ h.p. Triumph) ...	10	41½
3. W. F. Adams (3½ h.p. B.S.A.) ...	10	42

Seventeen competitors.

TWENTY MILES OPEN HANDICAP.

Rider and machine.	H'cap.	M.	S.	Time.
1. A. Combs (3½ h.p. Premier) ...	5½	...	20	45½
2. J. Stewart (3½ h.p. Triumph) ...	1½	...	20	40
3. C. R. Martin (3½ h.p. Triumph) ...	2¾	...	22	0

Eighteen competitors.

FIFTY MILES OPEN HANDICAP.

Rider and machine.	H'cap.	M.	S.	Time.
1. A. Combs (3½ h.p. Premier) ...	14	...	66	33½
2. G. Lavery (3½ h.p. Triumph) ...	12	...	69	27
3. J. Stewart (3½ h.p. Triumph) ...	4	...	61	35
4. J. Sloan (3½ h.p. Triumph) ...	12	...	71	3
5. W. F. Adams (3½ h.p. B.S.A.) ...	7	...	66	7
6. C. R. Martin (3½ h.p. Triumph) ...	7	...	66	43½
7. G. Simpson (3½ h.p. Triumph) ...	4	...	65	15½
8. L. McKisack (3½ h.p. Triumph) ...	8	...	69	43

Sixteen starters. An unfortunate accident occurred in this trial, whereby W. J. Chambers received a compound fracture of the right leg through colliding with another competitor.

Saturday's speed trials of the M.C.U.I. (Ulster centre) at Magilligan. Preparing for the start of the ten miles scratch race.

Derby and District M.C.C.

The winner of the hill-climb held on Saturday, August 26th last, was Albert Ainsworth (3½ Rudge). Second on formula and fastest time, E. T. Bolton (7 Indian). On Saturday last an excellent afternoon's sport was provided in a reliability and speed competition for a speedometer, the donor of which prefers to remain anonymous. E. Lee (3½ Triumph) was the fortunate winner.

Club News—

Coventry and Warwickshire M.C.

The result of the Aberystwyth Run has now been announced after consideration of the times at the three controls and two secret checks. Two competitors tie for the awards, viz., A. Elson ($3\frac{1}{2}$ h.p. Triumph) and A. L. Ommaney ($3\frac{1}{2}$ h.p. Rudge.)

Those who won souvenirs were: S. H. Davis ($3\frac{1}{2}$ Rex), R. Lord ($3\frac{1}{2}$ Rex), and J. F. Spencer ($3\frac{1}{2}$ Singer and sidecar). The following completed the journey within 11½ hours, but exceeded the time limit of 20m. at one or both of the secret checks: G. H. Spicer ($3\frac{1}{2}$ Triumph), W. Grew ($3\frac{1}{2}$ Rudge), V. A. Holroyd ($3\frac{1}{2}$ Rudge), C. T. Lloyd ($3\frac{1}{2}$ Rex), A. C. Riley ($3\frac{1}{2}$ Triumph), and H. Clarke ($3\frac{1}{2}$ Triumph).

Helensburgh M.C.C.

A successful hill-climbing competition was held on Wednesday, August 16th, at Garshake Hill, Dumbarton. Competitors were divided into two classes, single and twin-cylinder machines respectively. The principal results were:

	CLASS I.	Fig. of Merit.
1. R. M. McCulloch ($3\frac{1}{2}$ Triumph)	527
2. H. W. Ballardie ($3\frac{1}{2}$ Triumph)	514
3. J. Grant ($3\frac{1}{2}$ Triumph)	463
	CLASS II.	
W. Watt ($2\frac{3}{4}$ Royal Enfield)	251
C. Watt ($2\frac{3}{4}$ Royal Enfield)	214

Essex M.C.

Members and others are reminded that the annual Snaresbrook-York-Snaresbrook twenty-four hours' reliability run takes place on Friday and Saturday, September 8th and 9th. In addition to the Triumph Challenge Cup, gold, silver, and bronze medals are offered, and there are also special prizes for the best amateur performance, the best lightweight performance, and the best passenger performance. The trial is for both motor cycles and cars. Full particulars may be obtained from Mr. Bernard C. de W. Siffken, Forest Side, Buckhurst Hill.

The Motor Cycling Club.

The autumn hill-climb will be held on September 9th, when the cup offered by Commodore Sir R. K. Arbuthnot, Bart., will be competed for in a class open to any single-cylinder machine over 300 c.c. The hill chosen will be one within easy reach of London, and classes for all types of machines are being included.

Doncaster and District M.C.C.

The results of the series of competitions for the President's Cup are subjoined. Marks awarded in the respective competitions:

Name of competitor.	Speed trial, June 5th.	Hill-climb, July 18th.	Reliability trial, Aug. 7th.	Total marks awarded.
1. T. H. Dnnstan ...	100	81.5	543	*724.5
2. L. Baker ...	70	68.78	503	641.78
3. E. Goult ...	98	72	457	627
4. L. Bassett ...	93	absent	511	604
5. J. S. Smith ...	92	65.5	406	+563.5
6. C. Barnsdale ...	90	64	401	+555
7. E. R. Scott ...	88.5	73.7	314	+476.2

*President's Cup. +Bronze Medal.

Glasgow M.C.C.

This year's consumption trial, held on August 19th, is notable for the startling record made on a T.T. Triumph by J. G. Grant, who covered a distance on his allowance equal to 277 miles to the gallon. The course was triangular, starting from Clarkston Station, with East Kilbride and Eaglesham as the other two points. Riders were not allowed to dismount, and had to go on until their allowance of petrol was exhausted. The three best performances were:

Rider and machine.	Miles covered.	Miles per gallon.
J. G. Grant ($3\frac{1}{2}$ h.p. T.T. Triumph) ...	35.2	277
G. W. Orr ($3\frac{1}{2}$ h.p. Ariel) ...	29.2	206
W. Hutchison ($2\frac{3}{4}$ h.p. Douglas) ...	23.1	198

THROUGH WARWICKSHIRE LANES ON A SINGER AND SIDECAR.

WITH reference to the new Singer sidecar model described and illustrated last week, by the courtesy of the firm of Singer and Co., Ltd., we were recently allowed a short trial of the machine, and accompanied by the head draughtsman decided to visit that well-known Midland acclivity Edge Hill. The high speed ratio was 6 to 1, and the low 8 to 1, and with this combination, a Millford castor wheel sidecar, and a combined weight of twenty-four stones, the 22 miles between Coventry and Kineton via Warwick and Gaydon Inn were covered in one hour. At Kineton the petrol tank was filled up to give a good head of spirit at the jet, and the hill was made for at a fair touring speed. At the first attempt the combination failed to get more than half-way up, but there were circumstances which prevented a good performance being made; however, after descending and making a few adjustments, with the same passengers it reached the first bend on top gear, when in went the low, and the engine romped away towards the top. Within twenty yards of the summit the engine stopped, not from conking or overheating, but from being overloaded; an indirect 8 to 1 gear is barely low enough for a $3\frac{1}{2}$ h.p. engine on hills like Kineton, and to prove it was due to gear and load the same combination brought the writer and a boy weighing together 17½ stones right over the first knob on the top, then the low and high ratios were used alternatively for about fifty yards, and finally the low to the summit. The way it took the last section of gradient was excellent, the engine doing about 2,000 r.p.m., and the machine travelling at about 18 miles an hour.

Now with regard to the general behaviour of the machine. First the engine starts remarkably easily with gear lever in neutral; the clutch manipulation by inverted lever on handle-bar is a charm, the whole combination starts readily on low gear by steadily releasing the lever and there is no jerk. Changing gear is rapid and reliable, no grinding takes place, and the clutch picks up the load without it being necessary to manipulate the levers gingerly. Of course, the machine is not a milestone devourer, as it has

not been built for that purpose. We should say it would average nearly twenty miles an hour on give and take roads, and with a slightly lower ratio on bottom gear would go anywhere except on heavy winter roads and against a strong head wind when a little bigger engine might be used with advantage.

The two-speed Singer sidecar combination half-way up Edge Hill.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All queries should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, E.C., and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately for ease of reference. Letters containing legal queries should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

A Machine for Ireland.

[?] Being a prospective purchaser of a motor cycle, and not knowing much about them, I would be thankful if you would give me information on the following subjects. My height is 6ft., weight 13 stones. The district here is fairly hilly, several hills of 1 in 10 gradient, and some of 1 in 6: (1.) What is the lowest horse-power I could use with comfort under such conditions? Would 2½ h.p. be too low? (2.) Could I get a reliable second-hand machine for £15 or £16? (3.) Would the ordinary height of frame suit me?—C.E.H.

(1.) What we should recommend is a 3½ h.p. (2.) If you could go to about £20 you would get a good magneto machine. (3.) Yes, the ordinary frame would suit.

Touring Abroad.

[?] I think of taking a holiday in France, Germany, Belgium, or Holland with my motor cycle. How shall I arrange for tax and driver's licence?—A.S.

First of all you had better take steps to become a member of one of the motoring organisations, and through this take out an international pass. The organisations also issue these passes to non-members, but you could not expect to obtain other facilities from them without becoming a member. The international driving licence is available in all the countries you name. Through becoming a member of one of the motoring organi-

Miss Connie Vine, who, after only one day's instruction, drove an A.C. sociable from London to Birchington-on-Sea. The A.C. is becoming popular among ladies, the tiller steering rendering it wonderfully easy to handle.

sations you can take your machine into France, Belgium, and Holland free of duty, but not so into Germany.

Rebushing.

[?] My machine, after 13,000 miles, is still running very sweetly, but shows loss of power upon the worst hills and against the wind. I should like a little enlightenment with regard to what I believe is the crankshaft. The ends, which are visible upon each side of the outside of the crank case, seem to have a little play, and I have been recommended to have them rebushed. Is the machine likely to suffer any damage by postponing this until there are more definite signs of trouble?—W.S.

No, as long as you do not put off the rebushing too long, you will do no great harm. Rebushing is only necessary if there is serious vertical play. A little end play does not matter.

Lubrication of Free Engine Clutch.

[?] I have lately had delivery of a standard 1911 free engine machine and have ridden the same 500 miles. For the last fifty miles or so I have had a lot of trouble with the clutch. As soon as I operate the lever to let in the clutch the back wheel, instead of taking up the drive smoothly as formerly, refuses to move. On lowering the gear from 4½ to 5 to 1 I find this difficulty with the clutch has disappeared. Can you let me know why this should be? As regards lubricating the clutch the makers recommend a certain brand of oil which is not obtainable locally. Will ordinary cylinder lubricating oil do instead, and if so how often should it be applied, or would it be better to use grease as for the magneto chain?—F.C.M.

We should imagine that in the case in question the clutch is liable to slip when the high gear is used, but that this slip is not sufficient to prevent the machine moving when the low gear you mention is fitted. Special oil of thin nature should be used for the clutch, as exceptionally thick oil, such as is sometimes used for engine lubrication, would cause the plates to adhere and prevent the satisfactory withdrawal of the clutch. We should imagine that at the present moment you are over-lubricating the clutch in question, and should, under no circumstances, advise you to put grease into the back hub. It would be much better to obtain a thin oil and use that instead.

Unbusinesslike Methods.

[?] What would you advise me to do in this case? About the end of April last I sent my back hub to be rebuilt with new rim and belt rim. On May 18th I received a letter from the firm saying that some delay had occurred with the belt rim, but that it was now in the works, and the wheel would be despatched the next day. Getting no further communication for a month, and the wheel not having arrived, I wrote four times within a fortnight, and only at the fourth time did I get a reply—that was last week. I was then informed that delay had occurred with the belt rim but that wheel was being sent that very day. It has not yet arrived. You will see that they have had my hub for eleven weeks (also my money), and for the last eight weeks I have been expecting it. What can I do? I have written as strongly as I can, but when they deign to answer it is only to put me off for a few more days. In fact, the only answer I got was when I wrote demanding the return of my hub and money.—W.W.

Our legal adviser's reply to the above is: Your correspondent "W.W." can sue the firm he mentions for the return of the back hub, or its value, and also for the return of the money paid. He should first send them a letter by registered post, telling them that unless this is done by return he will immediately place the matter in the hands of his solicitor.

An Aylesbury motor cyclist named F. S. Morton who has driven his Motosacoe with the above carrier attachment 3,482 miles in four months. The total weight of machine is 203 lbs. driver 147 lbs. and the average weight of goods carried is 98 lbs.

Sparkling at Contact Breaker. Overheating.

Recently I bought a second-hand motor cycle, which I believe is a 1906 model. It is fitted with a Longuemare h.b. controlled carburetter, and is fired with an accumulator and trembler coil. The compression is very good, and the engine has run about 300 miles since new rings were fitted and the deposit was cleaned off. For a while it ran all right, but lately it has developed the following defects: (1.) I get a spark at the contact breaker when machine is running. (2.) Engine overheats very badly. (3.) Where I could get nearly 30 "all out," now I only get about 12 m.p.h. (4.) The engine has spasmodic fits of misfiring, and will only climb hills very slowly that it used to "roar up."—A.S.H.

(1.) It is not surprising that you get a spark at the contact breaker when the machine is running. There is nearly always a weak spark at this point. (2.) Overheating may be due to a variety of causes: bad oil, excessive carbon deposit, or too strong a mixture. (3.) The symptoms almost seem to indicate that you have a partial obstruction in the carburetter. It is difficult to help you without seeing the machine, but a good repairer ought to be able to put the machine right without much difficulty.

A Mysterious Clank.

I have a 3½ h.p. 1911 Humber which runs and climbs splendidly; compression and everything is A1. On favourable stretches when the engine goes faster owing to falling gradient, and when run fairly fast on stand I get a single loud clank now and again in the engine. There is only one clank at a time, at various intervals. The same thing occurs sometimes if I lift the exhaust valve at speed. It can also be brought about by suddenly opening the air lever and occasionally when going over a bump when coasting down hill. To what is it due, and how can it be remedied?—G.B.S.

It is extremely hard to tell what this clank is, as there are so many kinds of noises, each of which might roughly be

called a "clank," and each of which is due to an entirely different cause. If you could give rather fuller particulars of this type of noise, as, for instance, does it slow the machine, and does it feel like a backfire, we might be able to put you on the right track. Turn the pulley round carefully when you have the cylinder off for cleaning the deposit, and listen for any strange noises in the crank chamber, in which event it is imperative that the engine be taken down at once.

A.C.I.V. Trouble.

I have a great deal of trouble with the a.c.i.v.'s of my 1911 machine. With strong springs there is great power at high speeds, but the machine will not run slowly, as the engine is unable to open the valves sufficiently. With weaker springs the bicycle starts easily, and can be run slowly, but cannot develop sufficient power. I also find that after removing and replacing the inlet valves the engine runs very badly for the first ten miles or so, as if there were a loss of compression. It is also very difficult to fit two springs of equal tension. Would it be possible to replace the valve cups and cotters with a screw-on cap, so that the tension on the springs could be adjusted?—T.H.J. This is one of the difficulties of auto-

matically-operated valves which cannot be overcome, and this is where the mechanically-operated valve scores over the other. There is obviously no cure. Probably there is really a loss of compression after replacing the valves, and a little oil and carbon gradually seal up the joints. Yes, you can fit a nut and lock-nut on to the valve stem for adjustment purposes, but really, with the ordinary cotter system, it is easier to get fairly good adjustment by means of different sized washers.

Faulty Ignition.

I have purchased a second-hand 1½ h.p. Minerva, and as far as getting it to start and keep running while on the stand everything seems to be in perfect order, but when taken on the road it requires some pedalling to get it to start, and then when started will fire two or three times, then miss one or two, and go on this way for a hundred yards before you can get it under way, and in some cases will stop until again assisted. (1.) Can you explain it? (2.) I am thinking of fitting in one of Siemens dry batteries, and if so will it work with a plain coil, or is any alteration required? (3.) Should the spark on this machine when starting be advanced or retarded, and where shall I find out when moving the lever that I am doing right?—STRATHDON.

(1.) We should advise you to examine the ignition and see if the contact points are perfectly clean, and that the spark occurs regularly at the plug. (2 and 3.) The spark, when starting, should be retarded. In order to verify this, note the way in which the cam rotates, and then that movement of the lever which alters the contact blade in the direction of rotation will retard the spark.

EXPERIENCES WANTED.

"H.B." (Putney). 7 h.p. T.A.C. with sidecar.

"Less Noise" (Hertford). 3½ h.p. Scott and sidecar, reliability of gear, etc.

"R.W." (Gothenburg, Sweden). 3½ h.p. Scott with sidecar.

"S.S.T.S." (Bury). 5 h.p. Indian and 3½ h.p. Bradbury, particularly as to cost of running and manipulation in traffic.

MOTOR CYCLISTS IN THE TERRITORIAL MANŒUVRES.

(1) H. Beedman, jun., whose two-speed Humber gave every satisfaction.

(2) A group of riders attached to the motor cycle section of the London Cyclist Battalion.

(3) Motor cyclists at the Territorial Camp, Royal Engineers, Thetford.

I WOULD introduce myself as a fairly enthusiastic pedal-cyclist wondering whether propulsion by muscular action of his legs is not an unnecessary "fag," and so contemplating with a certain amount of hesitation the purchase of a motor cycle. My hesitation may be attributed to my perplexity as to whether the advantages of the motor-driven machine sufficiently outweigh its disadvantages—so I may term them—to allow of my buying one with the feeling that I am getting a good bargain. And I have no doubt that there are hundreds of others in very much the same state of mind—debating whether to become motor cyclists or not—who may be interested if I state my case more fully.

The Crucial Point.

The main question I am asking myself—and, if I were certain of being able to answer it in the affirmative, I should hesitate no longer—is this: Can I, with my very limited mechanical knowledge and entire lack of experience of petrol motors, regard it as reasonably certain that the machine will keep in decent running order without large and frequent repair bills? Friends who motor cycle assure me that I can be fairly sure of that, as the modern machine of a good make has now reached such a state of excellence that mishaps are of rare occurrence. Just use a little commonsense, they say. This is all very well, but besides this useful quality one must possess a certain amount of necessary knowledge, and this is what I am afraid I have not got. Although I have read up all the information on the mechanism of motor cycles I have been able to obtain, I confess I am not yet quite clear as to the functions of the various parts of a magneto, while the idea of dismounting a cylinder or taking a carburetter to pieces and cleaning and replacing it fills me with something like dismay. ["Pedal-Cyclist" can rest assured that hundreds of motor cyclists do not know the exact functions of a magneto, and beyond a little attention to the contact points these machines will run a whole year without being touched.—Ed.] I have no doubt that while it is new the machine will run excellently without need of much, if any, attention on my part; but I want it to last, and it is the condition of the engine after six months' or a year's hard riding, of which I am apprehensive. I daresay after a little experience one can adjust and keep in good condition these (as it seems) extremely complex components of the power plant, but it will be understood that to one used to the empty frame and absolute simplicity of the pedal cycle such a task seems rather formidable.

Amongst the pleasant visions that I have of spinning along a straight level road at something over the legal limit there also come less pleasing forebodings in which I see myself one evening stranded,

through some trouble which I am entirely unable to locate, on a country road miles away from anywhere, with the result that I have either to push the machine or pedal it at a rate of about five miles an hour towards the nearest town or railway station.

Initial Expenses and Upkeep.

Then there is the matter of expense. The light weight model which I have provisionally selected costs, with lamp, horn, and licences, approximately £40—a considerable sum compared with the cost of a pedal cycle of very good quality. Do you get proportionate value for this discrepancy? Again, the yearly sum necessary for the upkeep of a motor cycle is out of all proportion to that which has to be spent by the owner of a pedal cycle. The latter's outlay is practically confined to the purchase of a new pair of tyres every year or eighteen months, a new chain at longer intervals, and occasionally, if he has not much spare time, a general overhauling of the machine by a repairer at the cost of a few shillings. On the other hand, the expenditure required for a motor cycle appears very considerable to one with a limited purse. Tyres cost about three times as much and (so one gathers) wear out a good deal more quickly than those on a pedal cycle. There are, too, the running costs for petrol and lubricating oil, as well as the numerous "spares" of all sorts which it is presumably necessary, or at least advisable, to carry. These, with the frequent repair bills, which, as hinted above, I am anticipating, seem almost to demand a greater sum than I am prepared to afford.

Other Points that Worry one.

There are one or two other apprehensions I may as well mention. With regard to lubrication, it appears that if by some mischance I should forget to give oil at the correct intervals (though this, I hope, is scarcely likely) I shall ruin the engine altogether; but if, on the other hand, determined to be on the safe side, I give more oil than the engine needs, I shall encounter trouble in the shape of sooted plugs and so on. Then there is the question of cleaning the machine. One can pound through the thickest winter mud on a pedal cycle with the certainty that half an hour's or less attention on the next day will do all that is necessary. With a motor cycle under similar circumstances one would imagine that the time needed to bring the machine into decent condition would run into hours. Also those minor adjustments and repairs which I may learn to do myself seem likely to take up a very great portion of my spare time.

Another rather important consideration is that of the weight of the machine and the resulting modification of that ability to go almost anywhere that is a great characteristic of the "push" bicycle. I have had many enjoyable rides through lanes and along footpaths where there have been stiles and closed gates

Shall I Buy a Motor Cycle?—

to negotiate, and with my 30 lb. light roadster to surmount them was quite an easy matter. With a motor cycle of about four times the weight, however, these

defects—or, let us say, points wherein it falls short of perfection—in the motor cycle (which I have perhaps painted rather too black in the attempt to illustrate my point of view) do not outweigh the incontrovertible fact that an effortless speed of anything up to thirty miles an hour is beyond all comparison with an average speed of only ten miles an hour produced by physical exertion, which causes, after forty or fifty miles, a decided "weariness of the flesh." If (as is probable) I decide on the purchase of a motor cycle, and determine to take my chance of any of these unpleasant consequences, I trust I shall be able to sail up hills which previously I either had to walk or else surmount by an altogether disproportionate expenditure of energy; to run along a level road at a speed that really will get me over the ground; and when forty or so miles lie between me and home, far from being rather uneasy at the thought, that I shall look forward to the run, confident that on arrival there I shall not be in a more or less tired condition, but as fresh as the proverbial daisy. I look forward, too, to tours on a machine which will enable me to reach and explore the districts I select with far more comfort and in

AN INCIDENT OF THE 1,000 MILES TRIAL.

A. C. Robbins (3½ h.p. two-speed Humber) passing through the water near Coxwold. There were four water splashes on the course.

obstacles would not by any means be easy to tackle. At the same time, I realise that for unobstructed lanes and tracks, that scarcely can be called roads, the motor cycle is generally very nearly as handy as its less speedy prototype.

However, all these (I suppose) quite unavoidable

much less time than I could ever dream of on a pedal cycle. In view of all these benefits, then, which the motor cycle confers on its owner, I ought not to insist any further on my conception of its disadvantages, which are possibly rather more apparent than real. Such, at any rate, I hope they may turn out to be.

An Italian Hill-climbing Contest.

THE Mont Cenis hill-climb for this year has been a conspicuous success. All records have been beaten, and the first five men in the half-litre class have succeeded in lowering Riva's record, namely, 28m. 5s., which was established in 1905. The following are the results:

Lightweight machines, cylinder capacity not exceeding 333 c.c.—1, Luigi Semeria, 25m. 8²/₅s.; 2, Jean Borgotti, 25m. 36²/₅s.; 3, Facchetti, 26m. 0²/₅s.

Half-litre class.—1, Riva Alexandre, 22m. 32⁴/₅s.; 2, Della Ferrera, 22m. 53¹/₅s.; 3, Berlie, 23m. 34³/₅s.

Class for machines with cylinder capacity exceeding half-litre.—1, Gelasio, 32m. 7³/₅s.

The Stampa Sportiva Cup for machines with engines not exceeding 290 c.c. rests with the S.I.A.M.T. This latter, thanks to Riva, also gains the Turin Motor Club Cup, and with Borgotti and Peracchio the prizes for the first machines in the 333 and 250 c.c. classes. Semeria rode a 290 c.c. machine.

Thanks to the excellent organisation, and to the fact that the principal makes and riders took part, the Mont Cenis meeting this year has been one of the finest ever held in Italy. The length of the climb was about thirteen and a half miles, which is a good

distance for a hill-climb, but the maximum gradient does not exceed 1 in 12.

WINNERS OF THE MONT CENIS HILL-CLIMB.

From left to right they are: Peracchio, Riva, Luigi Semeria (inventor and maker of the S.I.A.M.T.), and Borgotti.

A New Puncture Locator.

Below we publish an illustration of a new form of puncture locator, which has been designed by Mr. H. L. O. Gough, of Carlton Road, Nottingham.

The puncture locator designed by Mr. Gough and described on this page.

Showing the wire gauze backing and the method of fixing round tyre.

As will be seen, it is composed of a semi-circular piece of wood, and a folding handle to keep it in place when on the tyre. In the middle is a metal case with a glass front, and on the underside a piece of gauze enclosing a quantity of aluminium foil. The whole thing is passed over the tyre, and when it passes over the puncture the foil will be distributed all round the glass, thus obviating the necessity of taking the whole tyre out and immersing it in water.

A New Pattern Spring Fork.

The spring fork, of which we publish an illustration, has been designed by H.

Lanzerotti Spina, of 19, Upper Woburn Place, W.C. It may be described as follows:

To the heavy crown A of the fork is

fixed a long four-leaf flat spring, which extends in front of and behind the fork to the extent of about a quadrant of a circle. To each end of the flat spring is pivoted a rod B, which is also hinged at the lower ends of the forks. The forks

Front view showing metal case with the aluminium foil behind the glass cover.

are composed of two hollow upper parts C (pivoted to the heavy crown), and of two lower parts D, which slide in the hollow of the former, or they may be as shown in fig 3, viz., with upper parts that slide in the hollow of the lower. A spiral spring F is set between the two parts in each case.

The upper ends of the rods B B, as well as being attached to the end of the flat spring, work on a pivot fastened to the mudguards, which latter are hinged fore and aft of the heavy crown A, or they may be fastened by bolts which pass through a slot in the mud-guard (see fig. 3). Thus, when the spiral spring F is depressed, the mudguards are forced upwards and outwards with the flat springs, being supported on hinges attached to the fork crown.

As may be seen in the drawing, when the cycle meets with an obstacle the front wheel is forced upwards and the long flat leaf spring helped by the spiral spring is claimed to absorb any kind of shock received by the machine.

The Lindum Pulley.

No one will deny that it is extremely advantageous to be able to adjust the engine pulley without the aid of tools. The Lindum Engineering Co., St. Peters-at-Gowts, Lincoln, have recognised this, and in designing their new quick adjustable pulley they have made it so that it is readily adjustable by finger and thumb without the aid of tools. The pulley is composed of the three usual parts—the fixed flange and boss, loose flange, and adjusting nut. In the locked position the outer ring covers two steel balls which act as keys and hold the loose flange in different positions. When the

ring is pressed in with the thumb and finger the balls rise into an internal groove in the adjusting ring. The outer flange can then be moved to any position desired, and on releasing the ring small coil springs force the ring back until the balls register with the nearest slots. The pulleys are made in three sizes—4½ in. for lightweights, 5½ in. for medium weights, and 6 in. for heavy

weight twins. We append an illustration of the pulley which has been submitted to us for inspection.

Countershaft Gears.

The annexed sketch of a well-known make of engine illustrates the arrange-

ment of a countershaft gear which is likely to become popular on 1912 models. As will be seen, though the lineal speed of the belt is reduced, this drawback is counteracted by the fact that a very much larger pulley is employed, giving a bigger gripping surface for the belt. Our experience of this type of transmission is that there is no more slip than is usually allowed by the intervention of a belt between engine and road wheel, which gives an ideally elastic drive, and is, moreover foolproof.

THE REFLEX-CLIPPER “IDEAL” TYRE FOR MOTOR CYCLES.

WHAT'S IN A NAME?

Respecting Tyres—the name Reflex-Clipper stands everywhere as the hall-mark of excellence. The Reflex-Clipper “Ideal” Tyre for Motor Cycles gives fullest expression to that sentiment.

Just notice the build of it. Made entirely on Car Tyre lines. Of perfect proportions. Has weight where most needed, yet Al for speed. Is secure against side-slip, and stands foremost in the quality line.

Price of Tyre	£2 8 0
Price of Cover	1 18 0
Price of Tube	10 0
(For 26 x 2½ Beaded Edge.)

LONDON—18, Chiswell St., Finsbury Square, E.C. COVENTRY—Alma St.

In answering this advertisement it is desirable to mention “The Motor Cycle.”

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 14 words or less 1/6, and 1d. per word after. Each paragraph is charged separately. Name and address must be counted. In the case of Trade Advertisements a series of thirteen insertions is charged as twelve.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," Coventry, or London (20, Tudor Street, E.C.), by the first post on Friday morning previous to the day of issue.

All letters relating to advertisements should state distinctly under what heading and in what issue the announcement appeared.

CLASSIFICATION BY LOCALITY.

For the convenience of purchasers of second-hand motor cycles, the advertisements are classified into districts, as many readers like to know what machines are for sale in their immediate neighbourhood before going further afield.

Plan showing division of England into Sections.

SECTION I.
Northumberland, Cumberland, Durham, and Westmorland.

SECTION II.
York and Lancashire.

SECTION III.
Carnarvon, Denbigh, Flint, Cheshire, Derby, Stafford, Shropshire, Montgomery, and Merioneth.

THE HOUSE THAT GUARANTEES—

London's most satisfactory value in every deal, whether for cash or exchange. Send brief details of present machine, and we will forward liberal cash allowance offer for same in part purchase of any new machine.

WAUCHOPE'S

9, Shoe Lane, Fleet St., LONDON, E.C.

'Phone—5777, Holborn.
Telegrams—"Opifcer, London."

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, 2d. will be charged for registration, and three stamped and addressed envelopes must be sent for forwarding replies. Only the number will appear in the advertisement. Replies should be addressed, "No. 000, c/o 'The Motor Cycle,' Coventry"; or if "London" is added to the address, then to the number given, c/o "The Motor Cycle," 20, Tudor Street, E.C.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but if not we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions exceeding £10 in value, a deposit fee of 2s. 6d. is charged, when under £10 the fee is 1s. All deposit matters are dealt with at Coventry, and cheques and money orders should be made payable to Ibbie and Sons Limited.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

Complete £5 : 5 : 0 Complete

FARRAR'S HALIFAX SIDECARS.

Absolutely the finest value on the market.

LESS POWER.

It is admitted by experts that, owing to the unique design, far less power is required to propel Farrar's Sidecars than any other style on the market.
NOTE Our front arm which grips the sidecar CENTRE. Nothing lopsided about this attachment.

All our Sidecars are now fitted with Farrar's quick detachable joints and cranked back axles, refinements found on very few other makes.

ARE YOU AWARE THAT HELLESEN

"FLASH"
MOTOR
CYCLE
TYPE.

PRICE
only
6/6
each.

DRY BATTERIES

can be used with
equal advantage with

TREMBLER COILS

AS WELL AS

PLAIN COILS.

Although a Trembler Coil consumes slightly more current than a Plain Coil it is only necessary to fit a larger size battery to allow for increased current consumption.

We will test, *absolutely free of charge*, any type of coil with which it is proposed to use **HELLESEN DRY BATTERIES** provided it is forwarded to us carriage paid.

At all times are we only too pleased to assist and advise in any matter regarding the well-known **HELLESEN DRY BATTERY SYSTEM OF IGNITION.**

Remember, Helleesen Dry Batteries are far cheaper than accumulators, whilst added to this they cost nothing to maintain.

Write us so that we may write you.

We send our Catalogue to you for nothing.

A. H. HUNT,

3h.p. Minerva, h.b.e., new back cover and tube, new Fuller accumulator and coil, absolutely first-class running order; only wants seeing; £12/12.—11, Church Rd., Brixton, S.W.

8-10h.p. J.A.P. type twin engine, m.o.v., with Bosch O.A.V. magneto, B. and B. carburettor, and silencer; £17/17.—H. Murray, 14, Alford Rd., Wandsworth Rd., London, N.W.

3½h.p. Brown, Druid spring forks, Brown and Barlow carburettor, h.b.e., accumulator ignition, Clincher tyres, perfect running order; £14.—C. Robb, Heath Rd., Harpenden, Herts.

2½h.p. Minerva-B.S.A., 1911 refinements, everything new, only ridden 2,000; write for particulars; appointment; sacrifice £12/10, no offers.—11, Groombridge Rd., South Hackney, N.E.

3½h.p. Scott, 1910, just overhauled, perfect condition throughout, 1911 forks fitted, also F.R.S. lamp, generator, watch, horn, tools, etc.; £42.—Everingham, 37, Auckland Rd., Ilford.

1909-10 6h.p. Vindex Special, as new, unspratched, new Palmer studded, 1911 B. and B., Whittle, Truffaut forks, etc.; cash needed; £28/10.—14, Bushey Rd., Harrington, Middlesex.

7h.p. Twin Chater-Peugeot, magneto, practically new, ideal sidecar machine; £33, decent accumulator machine taken in part payment.—B., 12, Shrubbery Villas, Bushey Rd., Sutton.

LADY'S 1911 3½h.p. Brough, excellent condition, just overhauled, winner of many competitions; £35, or near offer; having faster machine.—Miss Berend, 2, Almeida St., Highbury, London.

ROC 2-speed Gear, brand new rim, just overhauled by makers, perfect condition, to fit Triumph, £5/15; also nearly new sidecar, to fit Triumph, £4/10.—45, Clarendon Rd., Downham Rd., N.

ZENITH Gradua, 1911, 3½h.p., little used, good as new, complete with all accessories; £43, cost £54/12 three months ago; seen any time.—Dear, 58, Parkhill Rd., Haverstock Hill, N.W.

Sociable or Tandem.

It is rather a strange coincidence that, despite the booming in some circles of the quadricycle type of vehicle, this pattern appears to hang fire a good deal. However, there are one or two experimenters at work, and in a few months we may see some results of their efforts in the form of new pattern runabouts which will be a welcome addition to those vehicles which are already running and in some cases giving satisfaction to their owners. The fact that such machines are being used on our roads, and the possibility of them becoming ere long keen competitors of the motor bicycle and sidecar, causes one to ponder on the advisability of making the seats of this type of vehicle side by side or tandem.

Every sidecar user knows that nothing tries his engine more than a strong head wind. The continual hard work the engine is subjected to calls for a big throttle opening, and the area of the sidecar, motor bicycle and passengers is considerable. In consequence the engine very often overheats rapidly, and if a stiff hill has to be taken after riding a considerable distance against a strong head wind the engine is very likely to fail. This is one of the disadvantages of sociable seats, and as a large amount of the wind surface is reduced by placing the driver behind the passenger, it is not improbable that on this question alone tandem seating may be finally adopted.

Everyone with a knowledge of motor cycles will agree that the ideal passenger motor cycle is one of low power and great simplicity; if it is made with sociable seats and a car type of body, it is almost essential to employ a powerful twin-cylinder motor cycle engine, owing to the weight and windage. We should not like to say that, because the windage is

reduced and seats placed tandemwise, all the designer's troubles in connection with this type of vehicle would be over, but we do say that, with tandem seats and a very light construction of framework and wheels, it might be possible to obtain excellent results with a 500 c.c. engine. If this were possible, with the aid of a good variable gear, a considerable saving would be made in tyres, belts, chains, etc., and although a machine of this type would not average very high speeds, it would be in many ways superior to the detachable pattern.

Our original arguments on this subject still hold good, viz., that the moment a powerful engine is fitted to a motor quadricycle type of vehicle, the framework, tyres, transmission, and other details require to be strengthened up until it is difficult to differentiate between vehicles of this type and a small motor car. The majority of motor cyclists have had very little experience of fast passenger work, and do not realise the cost of upkeep involved with a comparatively heavy passenger vehicle travelling at an average speed of twenty-five miles an hour, which is about the ideal sought for by those who favour this form of vehicle.

The old types of quadricycle were fitted with three-horse engines, geared 8 to 1, and averaged about eighteen miles an hour. Their total weight was just over 4 cwt., and their seats were placed tandem. Had they been sociable seats we are certain they would not have done as well as they did. Allowing for improvements in general construction, it is doubtful whether an up to date tandem quadricycle could be made very much lighter even with a single-cylinder 500 c.c. engine. The sociable seats have great advantages in other ways, but can the vehicle be made and sold at a moderate price?

Why not a Vapour-driven Machine?

THE little four-wheeler described and illustrated on this and the following page is one in which the designer is attempting to obtain the silent running and flexibility of the steam-driven car in a light vehicle built on motor cycle lines. It will perhaps be well to state at the outset that the machine is being built, and that the power plant has already seen several years service in a launch. The latter is not an untried experiment, nor is it a mere idea existing only on paper. I mention this advisedly, since everyone to whom I have described the engine have had their doubts that it will work, others have expressed their conservatism by avowing that they would prefer to sit on a barrel of dynamite at a fifth of November celebration. This is probably the view many motor cyclists will take when they learn that the power is derived from vapour made by boiling petrol in a flash-point boiler, and using the gas expansively, instead of by internal combustion, as in the petrol engine with which we are so familiar. Hence it is necessary to state that these engines were so popular in American

and identical in every way with the one I am about to describe.

Built by the Marine Vapour Engine Co., of Jersey City, U.S., this engine develops 7 h.p. under normal

launches that one firm alone—the Gas Engine Power Co., of Morris Heights, New York—have built thousands during the past fifteen years, and so safe are they considered that their owners are not required by law to engage a qualified engineer, as is the case when steam is used.

Expansion versus Explosion.

The internal combustion engine has largely taken their place owing to its greater power for weight, but there are now to be seen many of these boats still doing good service, while younger sisters engined by internal combustion motors have been scrapped as worn out.

I have a photograph in my possession taken from an American yachting paper some fifteen years old, which depicts a motor boat race in those days, and the five power craft shown are all equipped with this type of engine. Further, one may often see a launch of this type in the Solent whenever any of the older American steam yachts, which carry them as tenders, are in the vicinity. The German Emperor, the late Khedive of Egypt, and Prince William of Wied were among the many yachtsmen on this side of the Atlantic who have owned this type of launch, while for several years the late President Cleveland used a launch which was equipped with an engine made by the same firm

conditions, but for short spurts it is possible, by increasing the pressure, to obtain something like 10 h.p.

Although apparently very complicated, it is really very simple in action, and a few minutes' study of the accompanying drawings will show this to be the case.

Details of the Engine Mechanism.

The three cylinders are arranged at an angle of 120 degrees apart, with the three connecting rods working upon one crank, but its greatest feature is the valve motion. The valve (fig. 1) is an annular disc, with twelve admission and twelve exhaust ports, the disc being so geared that it is made to revolve once to twelve revolutions of the crankshaft, thereby eliminating friction to a greater degree than is possible with the usual type of steam slide valve.

The riding cut-off valve (fig. 2) admits of expanding the vapour to any extent, and a forked shaft controls it, and the reversing rack (fig. 3) through the medium of rollers and cams (see fig. 4). When the motor is running ahead with the lever at the point of greatest

expansion, and the lever is then moved quickly to the reverse position, the cut-off valve (fig. 2) is brought to a point which gives admission of the vapour the whole length of the stroke before the moving valve

Why not a Vapour-driven Machine?—

mechanism is influenced at all. This overcomes to some extent the dead centre effect. The boiler, as originally equipped, is very small, and consists chiefly of a single coil of steel tubing, but the owner, who, by the way, is not the writer of this article, contemplates using an even smaller affair with four coils of tubing which will be hydraulically tested to 1,200-lbs. per square inch, which, with a working pressure of 200 lbs., should guarantee safety at this point.

The boiler will hold about six pints, and will be automatically fed by a drum pump, which will be

driven from a counter-shaft embodied in the gear box casing. Another pump feeds the burner with cheap grade petrol or a mixture of petrol and petroleum, which will be carried in a tank at the rear. A third pump will return the petrol to its welded

tank beneath the machine, while a fourth will give a strong blast of air to the burner. For starting, and as a stand-by when the engine is not working, an auxiliary burner with hand pump will be used. A few strokes of this pump is all that has been found necessary, and it is possible to get under way within two or three minutes from cold.

The condenser will be placed beneath the chassis, and will consist of steel tubing with radiating outer surface, while the funnel will be a long pipe running along the off side of the machine, turning in and under the frame work to discharge clear of the wheels. This pipe will not be of the dimensions shown in the drawing, but much smaller, and enclosed is a light tube lined with asbestos.

A final word or so regarding the power plant. Safety valves are fitted both on engine and boiler, discharging into the exhaust. These valves will be set at 250 lbs., and should a leak occur within the generator the vapour will burn like an ordinary gas jet, hence danger at this point does not exist.

The entire power plant, including gear box and differential, is estimated to weigh about 300 lbs.

General Design of Chassis.

With regard to the machine in general, the drawings are sufficiently clear to need little description. The chassis, being built of steel tubing, will be left open as shown in the drawing, no body work being employed for two reasons; to save weight and because the owner desires a motor cycle type of vehicle and not a car in miniature. Two bucket seats will be fitted, the front one being carried on four coil springs and the rear seat on two.

All four wheels are sprung, and the steering will be effected by means of a drum on a horizontal shaft, which will be connected to the steering column by a short flexible shaft. The gear box contains a variable gear, drum brake, and reverse, but the latter will not be connected up in view of the fact that the engine is of the reversing type.

The oil tank and pump will be carried outside and on the left side of the chassis, while behind it a tool bag will be located. On the right side of the machine a carrier will be fitted on the lower framework. Three inch tyres will be fitted, and the dashboard will carry the auxiliary burner tank and pump, and the accumulator for the two small swing lamps on the mudguards, all enclosed in a case, on either side of which will be a speedometer and a pressure gauge. Forward of this case will be the generator for the head light, which will be on a revolving stand and connected to the steering-shaft by means of Bowden wires, so that the

The complete design of vapour-driven quad with tandem seats.

rays will illuminate the course of the machine in round corners as in the case of a single tracker [This form of searchlight lamp, though desirable for many reasons, is not legal in Great Britain.—ED.]

Two hand brakes will be fitted to the rear wheels, which, like the drum brake on the cardan-shaft, will be controlled by pedals. The engine control lever will be carried to the steering wheel, while two levers or the diagonal connecting tube will control the burner and exhaust valve.

Such is the design as at present laid out, but no doubt many alterations will be found necessary when the machine is assembled.

SPES.

THE MICHELIN GUIDE.

Most of our readers who have travelled abroad have learnt to appreciate to the full that most excellent little work, the "Guide Michelin," the information contained in which is full, reliable, and of the greatest utility. It is with pleasure, therefore, that we have to record that a "Michelin Guide to the British Isles" has now been issued, price sixpence. The excellent system preserved in the Continental publications of the Michelin Company has been followed in the British guide. The book contains hints on tyre management, which is then followed by a most useful list of circular trips in the most interesting portions of England, Wales, Scotland, and Ireland. Next follows an alphabetical list of towns, with exits, routes, and distances. A small wheel placed near the name of a town indicates that Michelin tyre stockists are to be found in this place. The method of denoting the style of hotels is a good one. A small map, in which the streets are numbered clearly, denotes the way through the town. At the end of the book is an atlas of great utility.

THE 1912 T.T. RACES.

WILL THEY BE HELD?

WE have already mentioned that manufacturers have had under consideration the question of supporting or boycotting the Tourist Trophy Motor Cycle Race as held under present A.C.U. regulations on the four-inch course in the Isle of Man.

This is not a trade journal, and it is not our practice to argue trade points until they have been deliberated in the trade councils and the industry has come to some definite conclusion respecting them, but as riders are particularly interested in the T.T. Races, we feel bound to discuss the situation as it develops. Therefore, in the event of the Isle of Man races being quashed, it will be advisable, perhaps, to suggest alternatives and point out whether the Isle of Man event or an alternative competition would be more advantageous to motor-cyclists.

Reasons for Dissatisfaction.

We gather that a good deal of dissatisfaction in connection with the Isle of Man races has arisen in certain quarters due to the number of accidents that have occurred in the past, the expense of holding the races, and the fact that the events are not won on standard machines which can be supplied to the public, and in many instances accessories such as tyres and other details are employed which are equally unobtainable by the general body of riders. There is a certain element of truth in this, and it has occurred to us that in the event of the A.C.U. being sufficiently persuaded and influenced not to hold the race, and provided it is not participated in by the bulk of the industry, it is advisable to look around for alternatives to keep up the interest in what the trade must recognise as an incentive to the purchase of motor cycles and a means of improving their general efficiency.

Quite early in the history of the Tourist Trophy Races it was suggested in this journal that, in connection with the difficulty of the selection of what was a standard touring mount, a committee of the governing body should select a machine from a manufacturer's stock which should be sealed and not used until the day of the race. It has also been suggested in these pages that, in the event of the Isle of Man authorities refusing permission to hold the race, it might reasonably be held on Brooklands Track. Of course, the same conditions would hardly be in evidence, owing to the absence of hills and corners at Brooklands, but if the desire of the promoters of the T.T. Race is to test motor cycles and their engines to the limit of destruction there are very few better places than Brooklands on which to do it. A good deal of the sporting element in corner work, hill-climbing, etc., would be eliminated, but the race would be better than nothing.

Roadster Models of Standard Make.

With regard to the selection of roadster models of standard make, this again presents difficulties. Those

who legislate for the industry hardly appear to realise in this connection that there is a process known as "tuning." A committee might select an absolutely standard machine, and unless it was placed under lock and key and carefully guarded until the day of the competition it might be transformed very easily into a semi-racer by any expert rider who was accustomed to making those little adjustments which are essential to high speed and power. We cannot help thinking that to some extent the industry is making an error in its desire to eliminate the T.T. Races from its programme. Of course, we are referring here to the majority who are not in favour of any race. Possibly they imagine that we have practically reached finality, but we do not agree with them.

It is generally conceded that the T.T. racer of to-day possesses features which are embodied eventually in the flexible roadster of a year or two later. This is true to a limited extent. A real racer possesses features which must be modified to some extent before they can be embodied in a comfortable and easily controlled roadster; but the mere efficiency of the engine fitted to this type of machine is often so attractive that it is purchased in preference to heavier machines of possibly a more comfortable and flexible type. That being the case, there is, of course, more *raison d'être* for the race than appears at first sight. The experiences gained by manufacturers in the races in one way and another enable them to take the coarseness out of the running of the racing machine without very much impairing the all-round power efficiency of the engine.

Will the Races be held?

Our article must not be taken as conclusive proof that the race will not be held, because in all probability, if the A.C.U. is sufficiently influenced to withdraw from the Isle of Man event, the race may be held by another organisation. It is almost certain that sufficient support would be forthcoming from amateur riders to ensure the success of a race, whether it be held in the Isle of Man or at Brooklands. In the meantime we must ask our readers to bear in mind that no definite decision has been arrived at.

To stop all forms of racing leads to stagnation of design, and the industry would fall to the level of a sordid manufacturing ideal, which could only be likened to the production of sewing machines or some similar article of commerce—a humdrum, wearying output of goods on the Transatlantic principle, which may be money-earning, but is not calculated to keep this country in the forefront of progress: a position it now holds, and which we hope it will retain.

What has placed the British motor industry in its premier position is nothing more or less than first-class reliable workmanship, assisted by competitions such as the T.T. races, the 1,000 miles trials, and other events.

MILITARY Motor Cycling

By "CELEBRITER"

Pudney R. Jones

NOTES

THOSE motor cyclists who attended the Army Manœuvres in years past as despatch carriers and generals' orderlies are beginning to wonder whether there will again this year be an opportunity of combining a delightful holiday together with military instruction during September. It will be remembered that in these pages an earnest appeal was made to all civilian motor cyclists to refrain from again offering their services to the military authorities until such time as the latter saw fit to provide a suitable organisation for creating a volunteer motor cycle corps. Already two committees have had this matter under consideration. The one appointed by the A.C.U. forwarded a report more than a year ago to the War Office, of which no notice has since been taken; whilst the other committee, appointed by the War Office, has done little.

A Deadlock.

The result has been a deadlock, and in the meanwhile it has been decided not to hold the Army Manœuvres in Cambridgeshire on account of the drought, and civilian motor cyclists will not be invited to take part in whatever manœuvres may be held. During the past year several motor cyclists have been added to the establishment of Royal Engineer units, and also many officers in the regular Army have taken up the motor cycle pastime. It is believed that the military authorities are fondly relying upon these two sources to supply them with such motor cyclists as they may require pending the formation of a volunteer motor cyclist corps. On paper this sounds a very feasible idea—in fact, just the sort of idea which would be likely to commend itself to the theorists of Whitehall—but in practice, as every practical motor cyclist will realise, especially if he has had much to do with motor cycle amateurs, the idea is absurd. To the theorist, a motor cyclist, no matter what the experience of the rider or the make of his machine, is a man-machine capable of averaging thirty miles an hour over any roads, under any weather conditions. We civilian motor cyclists are responsible for having inculcated that opinion into the minds of the General Staff. We have sent them our best riders mounted on their best machines, each one of whom was not only deadly keen to excel in the work he undertook, but each one of whom was extremely well equipped in the matter of experience, knowledge, and ingenuity to undertake the work that falls to a motor cyclist at army manœuvres.

The motor cyclists who have lately been incorporated in the Royal Engineers are doubtless good all-round mechanics, but so far as motor cycling is concerned they cannot be compared with the expert enthusiasts who have volunteered for this work in the past; whilst as regards the officers who, having become possessed of a motor cycle during the past twelve months, are now willing to come out and help the General Staff on manœuvres, there are few who would be likely to shine in a reliability test.

Despatch Carrying.

In despatch carrying for military purposes, you not only require the very best kind of man and the very best and most suitable kind of machine, but it is essential to have a man who has every reason to place implicit confidence in himself and in his machine.

The ordinary motor cyclist is usually content and more or less

competent to tootle along the main roads at twenty miles an hour, stopping at a repair shop when adjustments are to be made or at the nearest hostelry when the weather becomes inclement or night supervenes. For this purpose, a lightweight machine in fair running order is all that is required, but that is not the sort of mount that is suitable for the orderly who has to "puff" for a general at army manœuvres. *Imprimis*, he has to carry all he wants for the duration of the manœuvres on his mount; he has to traverse roads which are not only blocked with troops, but which have been cut to pieces by the transit of army transport waggons and traction engines. More usually his journeys have to be accomplished at night, and it is seldom that he has an opportunity of getting on to a high road. What he requires is a high-powered two-speed mount with a free engine which is both fool-proof and weather-proof. If he is wise, he will carry all his spares with him, and he must know how to replace them himself, as repair shops are infrequent in the track of an army, and even when one is found it is liable to fall into the hands of the enemy. Personally—and I speak with considerable experience—I believe that the motor cyclist who goes through army manœuvres without a breakdown has qualified for a first place in the most stringent reliability test that man's ingenuity could contrive, and it is no aspersion on the motor cycling knowledge and capacity of the average R.E. or subaltern when I say that very few of them are fit to enter for such a test.

Will the Authorities take notice?

Let us hope that the authorities will realise these considerations as facts, and that during the winter they will in earnest take up the matter of forming a motor cycle corps of experts. Among the various suggestions already offered to the War Office in this connection the three following schemes appear to be the most practicable, and it is probable that at least one of them, if not all three, will be adopted.

(1.) One officer and seventeen motor cyclists added to the establishment of each of the thirteen authorised cyclist battalions.

(2.) Two officers and forty motor cyclists to be attached to the headquarters of each of the fourteen Territorial divisions.

(3.) Twenty groups of motor cyclists, each consisting of one officer and twenty men armed with Rexer automatic rifles (250 rounds a minute) for coast defence in case of war, and for staff duty on manœuvres.

In each instance it is suggested that the men should be attached for drill purposes to the Territorial unit nearest to their homes in order to enable them to learn the first rudiments of military knowledge.

A CRESCENT RUNABOUT fitted with the Astill patent easily-folding hood. The maker of the machine demonstrated to us a few days ago the ease with which the hood may be opened and closed without leaving one's seat.

Occasional Comments *by "Iron"*

Garage Assistance in the Six Days'.

The weirdest incident of the Six Days' was the close discussion between the officials as to whether C. T. Newsome should receive a gold medal, seeing that, though he finished with full marks for reliability and hill-climbing, his machine had a broken front brake wire at the last check.

Surely the officials are aware that the "parcel scandal" was as much in evidence as ever. Many men rode for a day or two minus some fitting quite as vital as a brake wire, and receiving a replacement from the factory, fitted it during the concluding stages, and scored full marks for bringing their machines to the finish "in good condition." As Mr. Merrall mentioned in our issue of August 31, one machine had nearly every spoke broken in the back wheel, and is described as being "in good condition" in Mr. Sharp's report. (N.B.—I do not blame either machine or rider, as the men should have been warned to climb some of the rough hills slowly.)

Another rider broke his stand, and exchanged stands with a private owner he met on the road; the report read, "Machine in good condition." For this the officials need not be criticised, as they were unaware of it; an extension of the "sealing" is their sole safeguard here.

Here is another graver item. Many men removed portions of their machines before entering the Harrogate garage at night, and then visited a repair shop, a plumber, etc., during the evening. A garage close to the hotel was literally crowded with competitors one evening.

Another man broke vital parts, made measurements with bits of string and wire, had new parts made at a repairer's during the evening and fitted them next morning. While admitting that the officials cannot watch all the garages along the route, I think they might stop the influx of parcels another year; and I think they might keep an eye on the garages near headquarters; also, they might compel competitors to leave their overalls, spare belts, tubes, etc., in the locked garage at night.

Perhaps the motor cycle has reached a stage when it is possible to seal the toolbags, and to do away with the half-hour for "adjustments" each morning. If such rules are a shade too stringent for present development, they could be applied and temporarily eased by a brief return to the old system under which a rider could lose a small percentage of marks and yet receive a gold medal. This would show up the performances in more accurate colours, without unduly penalising small adjustments.
